*In 1984 the first public hunt was held on North Manitou Island. No special regulations or bag limits were in effect until 1985 when the first special hunt was held. The 293 fawns shot in 1985 were not sexed when tagged by rangers.

*Success rate calculated by dividing number of deer taken by number of hunters participating (does not include those that did not show up on the island and does not reflect that some hunters took more than one deer).
