## U.S. Fish & Wildlife Service

# Introduction

## *U.S. Fish & Wildlife Service*

### Quick Facts

- 545 national wildlife refuges
- 95 million acres of fish and wildlife habitat
- 81 ecological services field stations
- 69 national fish hatcheries
- 63 fish and wildlife management offices
- 7,500 employees

The U.S. Fish and Wildlife Service is the principal federal agency responsible for conserving, protecting, and enhancing fish, wildlife, and plants and their habitats for the continuing benefit of the American people.

The vast majority of fish and wildlife habitat is on lands not owned by the federal government. Partnerships with Native American tribes, state and local governments, nongovernment organizations and private citizens are critical to the Service fulfilling our mission. Programs such as Partners for Fish and Wildlife, Partners in Flight, the Coastal Program, and partnership activities with individuals are the primary mechanisms for assisting in voluntary habitat restoration on non-Service lands and fostering conservation practices throughout the Region.

The Service manages the 95 million-acre National Wildlife Refuge System that consists of 545 National Wildlife Refuges and thousands of small wetlands and other special management areas. The Service also carries out its mission through the 81 ecological services field stations, 69 national fish hatcheries, and 63 fish and wildlife management offices located nationwide.

The agency enforces federal wildlife laws, manages migratory bird populations, restores nationally significant fisheries, conserves and restores fish and wildlife habitat such

as wetlands, administers the Endangered Species Act, and helps foreign governments with their conservation efforts. The Service also administers a number of grant programs that promote the restoration of fish and wildlife resources and their habitat on tribal and private lands.

The Service also oversees the Federal Assistance program that distributes federal excise taxes on fishing and hunting equipment to state natural resource agencies. This program is a cornerstone of the nation's wildlife management efforts, funding fish and wildlife restoration, boating access, hunter education, shooting ranges and related projects across America.

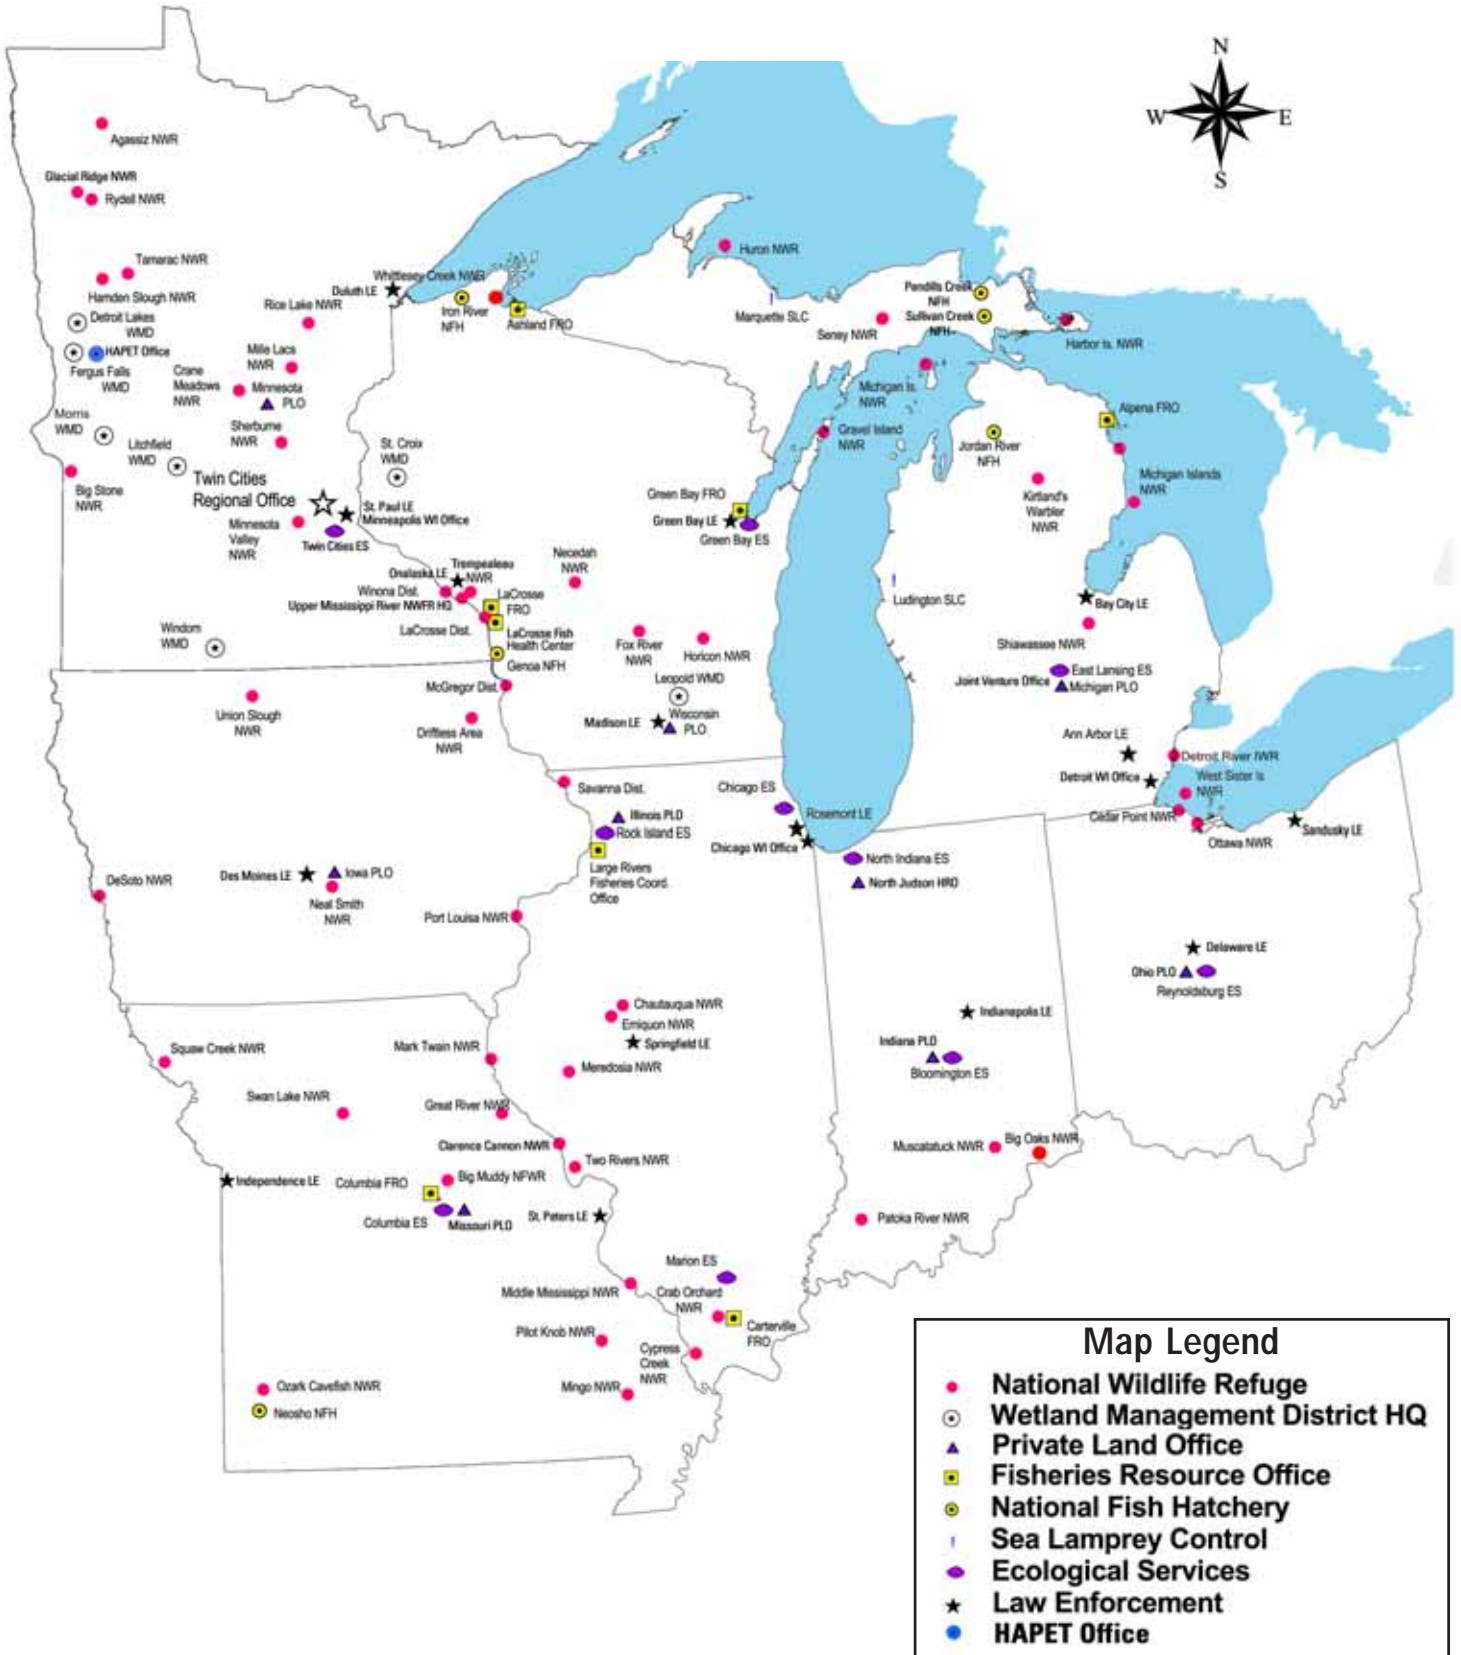

Approximately 7,500 people are employed by the Service at facilities across the United States. It is a decentralized organization with a headquarters office in Washington, D.C., seven geographic regional offices, and nearly 700 field units.

## U.S. Fish & Wildlife Service

# Midwest Regional Highlights

*Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio and Wisconsin*

### Quick Facts

- Employment: 1,110 people
- Acres Managed: 1.29 million
- The Fiscal Year 2004 Budget for Regional Service activities totaled \$80 million
- More than 7.7 million people visited national wildlife refuges throughout Region 3 to hunt, fish, participate in interpretive programs, and view wildlife
- More than 150,000 school children participated in Service educational programs
- 119,553 acres of wetlands restored
- 216 miles of streams restored
- 82,454 acres of upland habitat restored

### The Region is Committed to

- Expanded partnerships offering innovative opportunities to enhance the Region's fish and wildlife resources
- Healthy fish and wildlife trust species populations and habitats to support them
- Providing the public with quality hunting, fishing, wildlife watching, and other wildlife-dependent recreational opportunities on Service lands
- An organization dedicated to employee excellence, reflecting the nation's rich diversity, and providing quality service to and decision-making for the resources for which we have trust responsibility (migratory birds, threatened and endangered species, interjurisdictional fish).

### Regional Programs and Offices

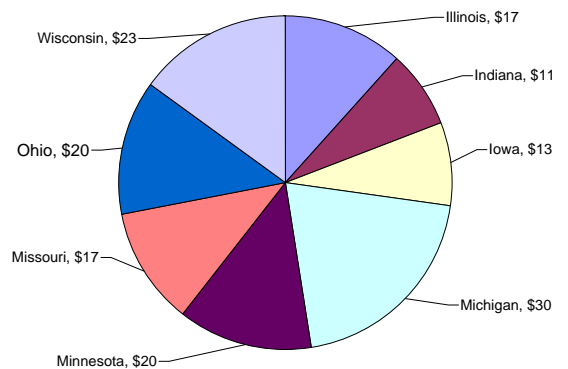

- 56 National Wildlife Refuges, including the newest – Glacial Ridge in northwest Minnesota
- 12 Wetland Management Districts
- More than 300,000 acres in waterfowl production areas
- 6 National Fish Hatcheries
- 6 Fishery Resources Offices
- 2 Sea Lamprey Control Stations
- 8 Private Lands Offices
- 9 Ecological Services offices
- 18 Law Enforcement offices

### Federal Assistance Program

In Fiscal Year 2004, the Region's Federal Assistance Office managed \$151 million to help strengthen sport fish and wildlife restoration programs throughout the eight-state region.

## *Fish and Wildlife Service Highlights*

### Quick Facts

#### 2004 Illinois State Facts

- The Service employs 125 people in Illinois
- The Fiscal Year 2004 Resource Management budget for Service activities in Illinois totaled \$11.2 million
- Ten National Wildlife Refuges in Illinois total more than 111,000 acres
- In 2004, more than 1 million people visited national wildlife refuges in Illinois to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

- In 2004 Illinois received:
  - \$7.1 million for sport fish restoration
  - \$4.3 million for wildlife restoration and hunter education
- Wildlife Restoration Act fund helps with the management of forests and grasslands which result in improved recreational opportunities for hunters and other outdoor enthusiasts. Overall funds have helped the state purchase six waterfowl management areas improving over 72,500 acres of wildlife habitat.

### Bald Eagle Recovery Efforts

The Rock Island Ecological Services Office coordinates nationwide efforts to recover the federally threatened bald eagle

### Cache River Basin

At Cypress Creek National Wildlife Refuge, home of the oldest living plants east of the Mississippi River, a partnership including the Service, Ducks Unlimited, the State of Illinois and The Nature Conservancy is preserving and restoring the Cache River Basin, recognized as one of the country's most unique natural areas and designated a Wetland of International Importance.

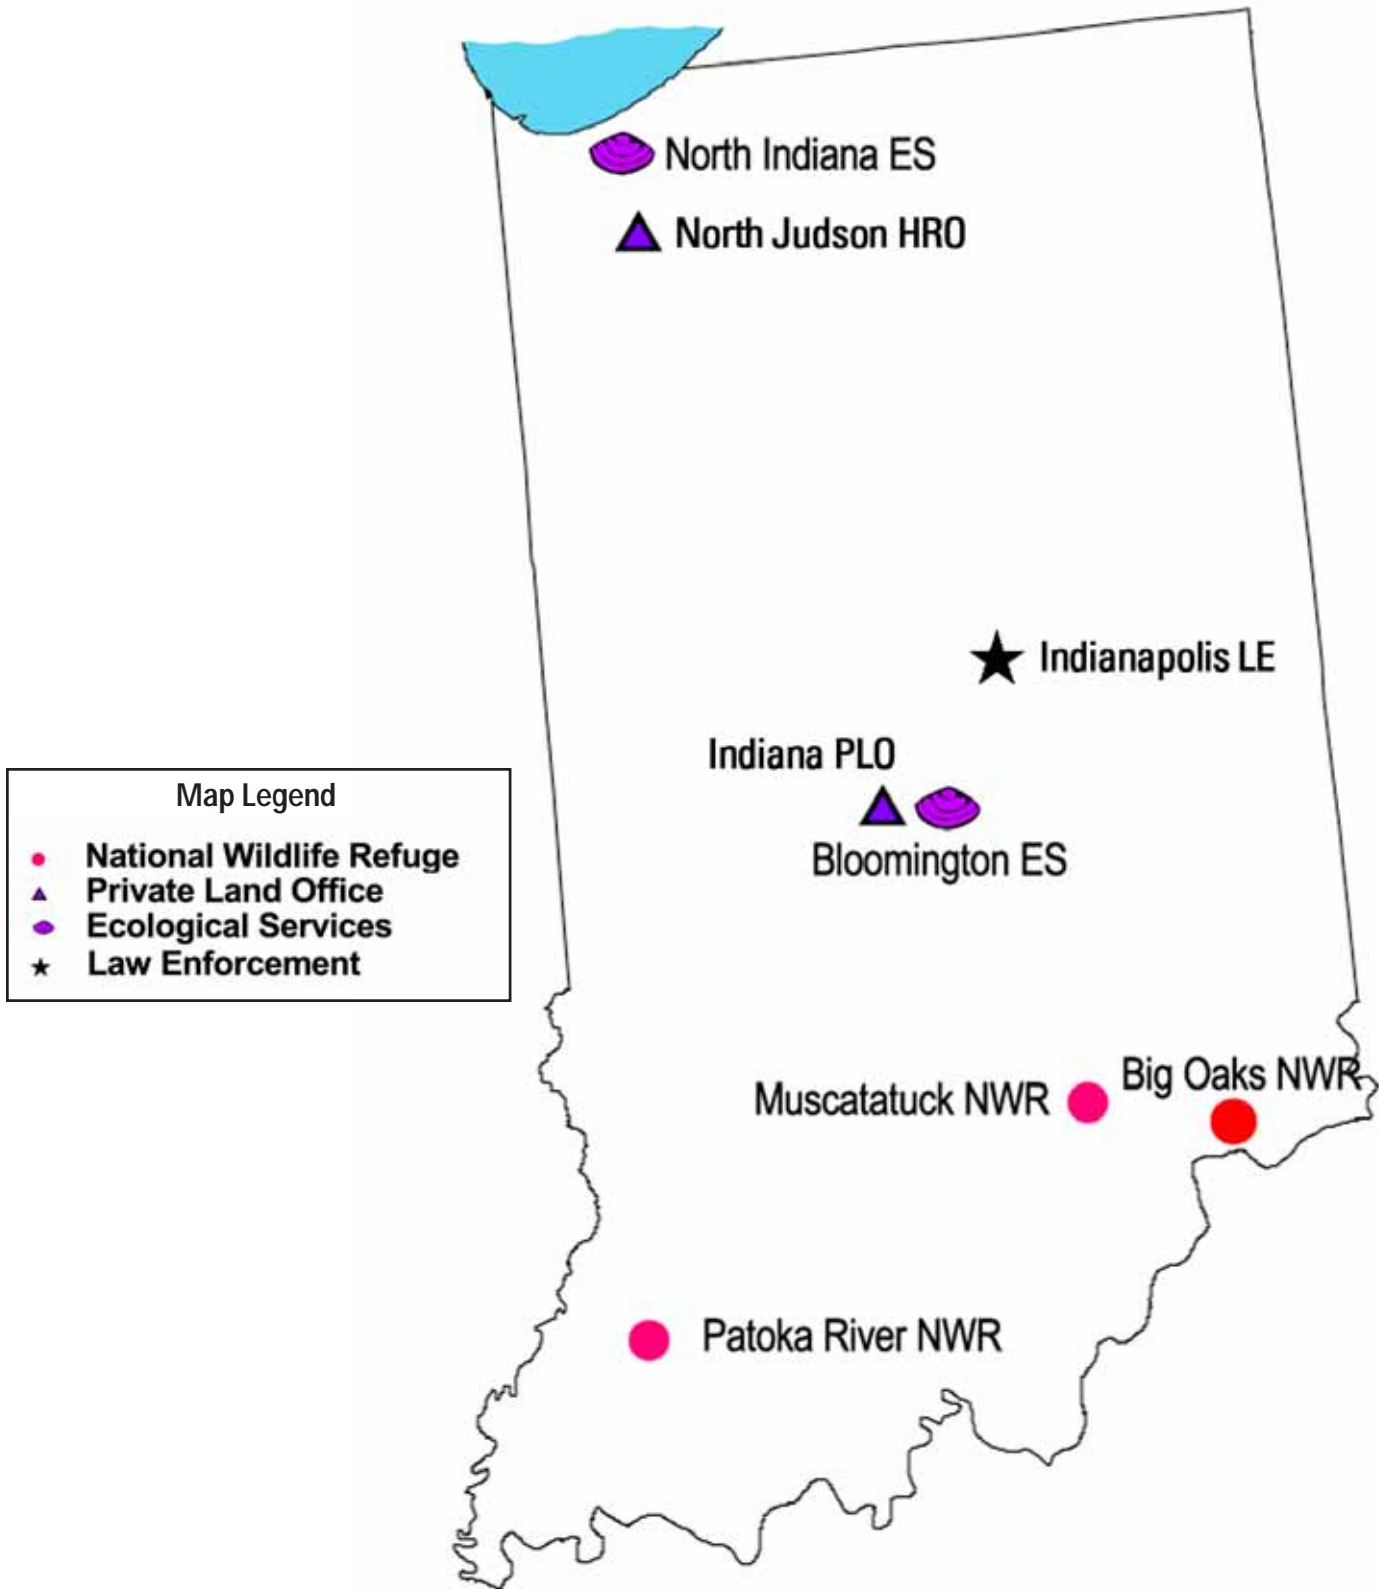

### Aquatic Nuisance Species

A partnership of state, federal and private groups is working together to control the invasion of aquatic nuisance species in Illinois' waterways. Recognized as threats to native fish, wildlife, and plants, as well as to the economy, non-native species such as Asian carp, round goby, and zebra mussels threaten the character of the state's waterways as well as the Great Lakes. Efforts to stop the advance of Asian carp toward Lake Michigan and to halt the downstream movement of round goby to major rivers systems — notably the Mississippi River — include intensive monitoring and installation of an electronic barrier on the Chicago Sanitary and Ship Canal.

# Indiana

## *Fish and Wildlife Service Highlights*

### Quick Facts

#### 2004 Indiana State Facts

- The Service employs more than 30 people in Indiana
- The Fiscal Year 2004 Resource Management budget for Service activities in Indiana totaled \$2.6 million
- Three National Wildlife Refuges in Indiana total more than 63,000 acres
- In 2004, more than 94,000 people visited national wildlife refuges in Indiana to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

In 2004 Indiana received:

- \$4.9 million for sport fish restoration
- \$3.5 million for wildlife restoration and hunter education

### Indiana Bat Conservation

Conserving the endangered Indiana bat is a high priority for the Service in Indiana. Strides are being made in cooperative efforts, including a Habitat Conservation Plan that allows expansion, development, and highway construction in and around Indianapolis International Airport in areas used by Indiana bats. The HCP calls for permanent preservation of bat habitat along with habitat restoration to ensure the species' continued survival near the airport. The state recently received a Service grant for \$587,250 to begin preliminary work on a statewide Habitat Conservation Plan for the Indiana bat on 10 state forests. The proposed HCP will be the first to address Indiana bat management concerns on actively managed forests, providing a positive model for other states and forest managers.

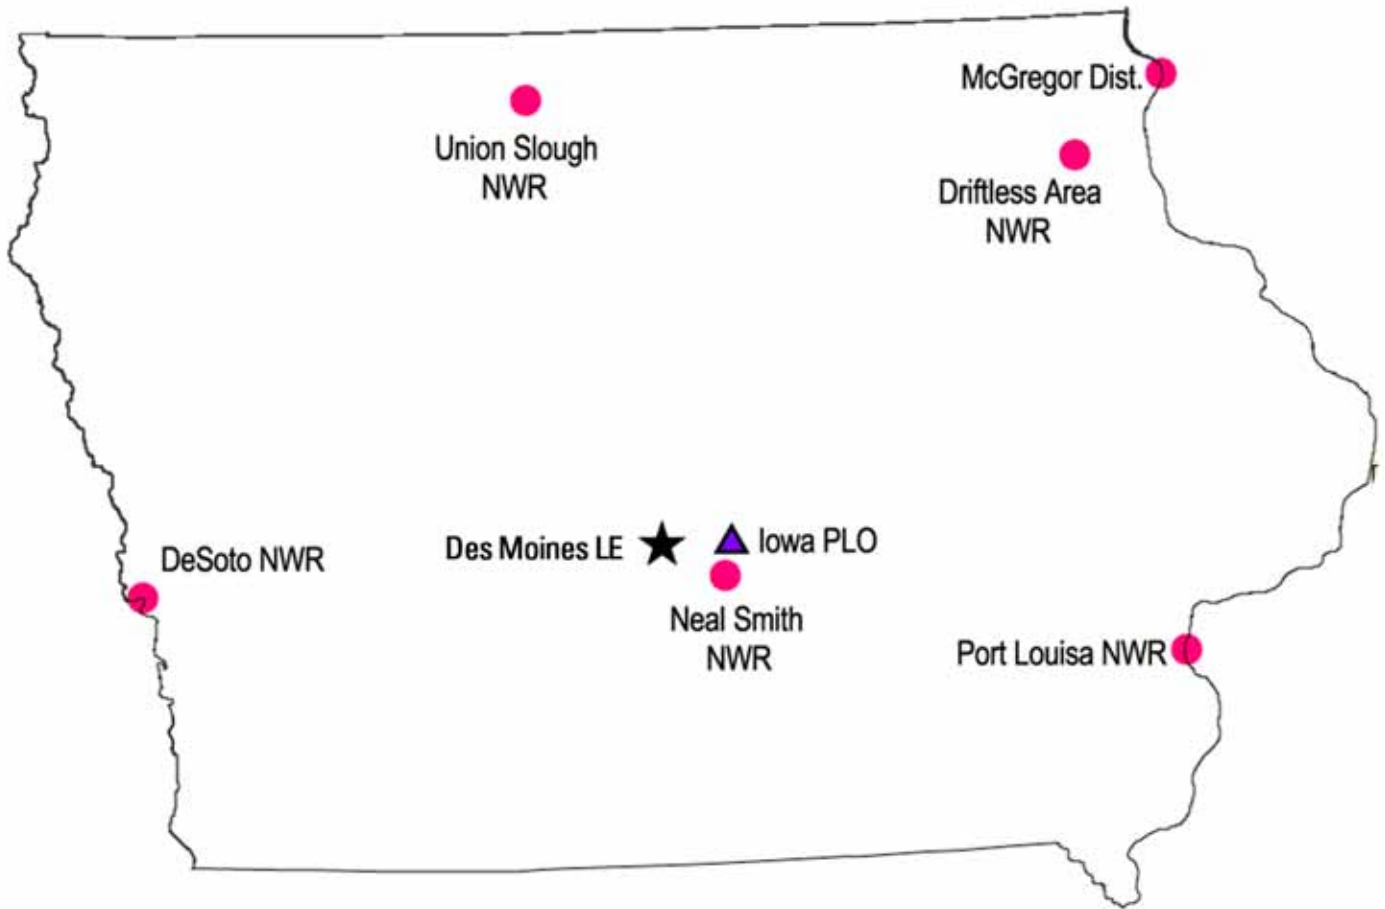

### Patoka River National Wildlife Refuge

Established in 1994, Patoka River NWR in southwest Indiana may someday encompass about 22,000 acres of bottomland hardwoods. At Patoka, the focus is on partnerships to restore habitat and clean up acid mine drainage in area waterways. The refuge works closely with the extremely effective South Fork Citizens' Committee on acid mine drainage issues in the watershed. The group works under the Clean Streams Initiative and its efforts are considered among the most effective in that arena.

### Quick Facts

#### 2004 Iowa State Facts

- The Service employs more than 60 people in Iowa
- The Fiscal Year 2004 Resource Management budget for Service activities in Iowa totaled \$5.1 million
- Six National Wildlife Refuges and one Wetland Management District in Iowa total more than 109,000 acres
- In 2004, more than 612,000 people visited national wildlife refuges in Iowa to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

In 2004 Iowa received:

- \$6.2 million for sport fish restoration
- \$3.3 million for wildlife restoration and hunter education

### DeSoto's Sunken Treasure

Located in Missouri Valley, Iowa, DeSoto NWR is home to a premier archaeological collection of 200,000 artifacts excavated from the buried hull of the steamboat Bertrand, which sank on the Missouri River in 1865. The wreck was discovered on the refuge in 1968. Visitors can view hundreds of artifacts recovered from the wreck at the refuge visitor center.

### Great Rivers, Restored Prairie Mark Iowa Refuges

Two hundred years ago a vast prairie ecosystem stretched unbroken throughout the Midwestern United States and into Canada. The tallgrass prairie ecosystem encompassed parts of 14 states including nearly all of Iowa.

Deep organic soils formed by the cyclic degradation of prairie roots left a rich legacy to modern agriculture: the most fertile soil in the world. As a result, 99 percent of the original prairie landscape in Iowa succumbed to the plow and other forms of development in a matter of a few decades.

Neal Smith National Wildlife Refuge,

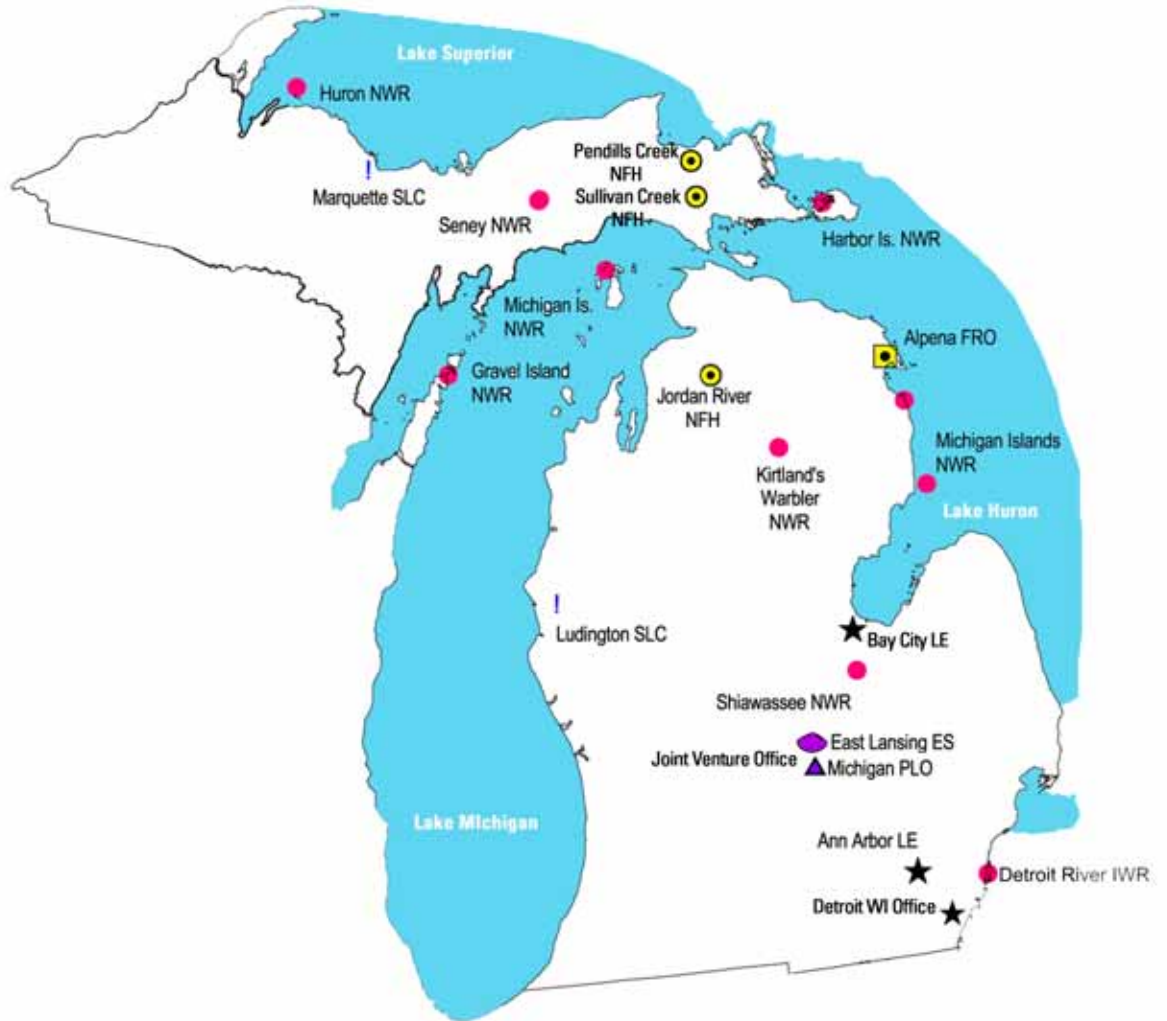

located just west of Des Moines, is working to re-create more than 8,000 acres of Iowa's native tallgrass prairie and oak savanna. Similar prairie restoration efforts are being mounted at the 3, 300-acre Union Slough NWR near Algona, in northern Iowa.

The Service also manages McGregor District of the Upper Mississippi River National Wildlife and Fish Refuge, Driftless NWR and Port Louisa NWR on the Mississippi River in eastern Iowa, and DeSoto NWR along the Missouri River in northwest Iowa.

Located along the Mississippi River Flyway, the Port Louisa and the McGregor District refuges were established to protect migratory birds. Key goals of these refuges are to conserve and enhance the quality and diversity of fish and wildlife and their habitats; and to restore floodplain functions in the river corridor.

## Quick Facts

### 2004 Michigan State Facts

- The Service employs more than 200 people in Michigan
- The Fiscal Year 2004 Resource Management budget for Service activities in Michigan totaled \$6.4 million

### National Wildlife Refuge Facts

- Seven National Wildlife Refuges and one Wetland Management District in Michigan total more than 113,000 acres
- In 2004, more than 143,000 people visited national wildlife refuges in Michigan to hunt, fish, participate in interpretive programs and view wildlife

### National Fish Hatchery Facts

- Six National Fish Hatcheries provide lake trout for Michigan's great lakes waters
- Three National Fish Hatcheries in Michigan provide many public opportunities for environmental education

### Contacting Service Offices

See tables at the end of this document

## U.S. Fish & Wildlife Service

# Michigan

## *Fish and Wildlife Service Highlights*

### National Fish Hatcheries

Three National Fish Hatcheries devoted to restoring lake trout to the Great Lakes stocked 3.8 million fish in Lakes Michigan, Superior and Huron.

### Sea Lamprey Control Stations

Staff at two Biological Stations work to control sea lamprey populations in the Great Lakes.

### Federal Aid to State Fish and Wildlife Programs

Sport Fish Restoration Act funds were used to develop one of the most extensive "harbors of refuge" programs in the world. The intent of this program is to ensure that, in case of an emergency, no boater is more than 15 shoreline miles from a safe port while boating on the Great Lakes. Funds awarded under the Act have played a major role in helping Michigan construct, expand and upgrade this harbor system.

### Offshore Lake Trout Stocking

The Service has stocked more than 22 million yearling lake trout into lakes Huron and Michigan in the past seven years using the M/V *Togue*, which travels more than 1,000 miles during the months of April, May and June from its home port in Cheboygan, Mich. The *Togue* was built in 1975 as a shrimp trawler and operated for 12 years before being confiscated in Florida by the Coast Guard for carrying contraband. The Service acquired it in 1989 and retrofitted it for stocking lake trout in the Great Lakes. Despite

continual maintenance since then, the *Togue* has deteriorated, and a replacement vessel, the M/V *Spencer F. Baird* (named for the founder of the U.S. Commission of Fish and Fisheries, the predecessor of the Fish and Wildlife Service), is expected to be operational in 2006. The *Baird* has been specifically designed for lake trout stocking and will also have sampling capabilities to support hatchery product evaluation programs.

### Detroit River International Wildlife Refuge

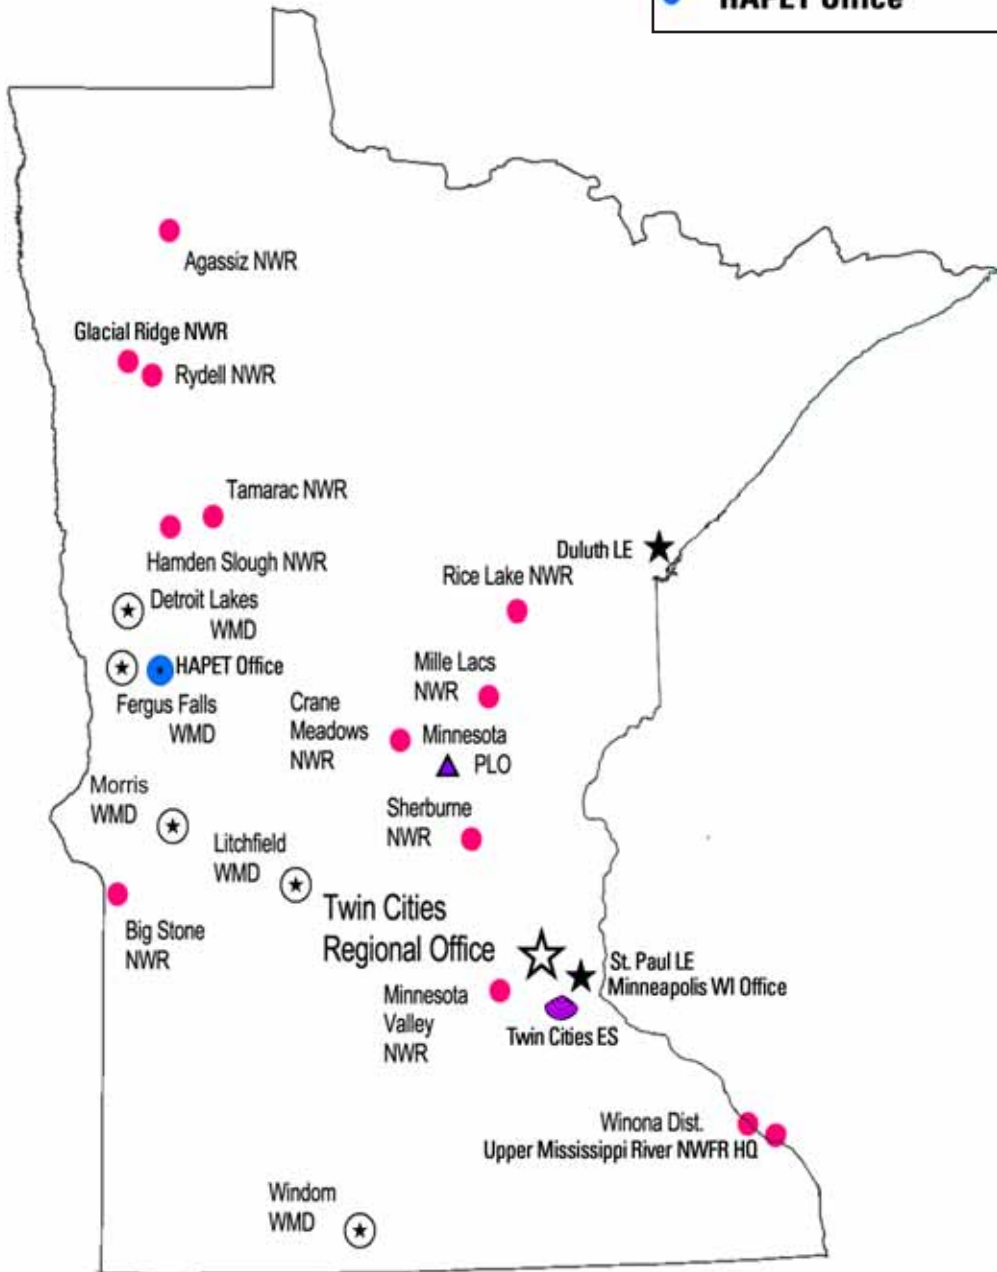

North America's first international wildlife refuge was established in 2001 and its first Refuge Manager hired in 2003. The refuge has undertaken comprehensive conservation planning, which will conserve, protect and restore habitat for 29 species of waterfowl, 65 kinds of fish and 300 species of migratory birds on more than 5,000 acres along the lower Detroit River in Michigan and Canada. The refuge is a result of an unprecedented partnership of government agencies, businesses, conservation groups, landowners and private citizens on both sides of the border.

## *Fish and Wildlife Service Highlights*

### Quick Facts

#### 2004 Minnesota State Facts

- The Service employs more than 450 people in Minnesota, and about half of those are at the Regional Office at Ft. Snelling.
- The Fiscal Year 2004 Resource Management budget for Service activities in Minnesota totaled \$30.5 million
- 13 National Wildlife Refuges totaling more than 207,000 acres
- Eight Wetland Management Districts totaling more than 332,000 acres (including easements)
- In 2004, more than 4.4 million people visited national wildlife refuges and wetland districts in Minnesota to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

- In 2004 Minnesota received:
  - \$11.2 million for sport fish restoration
  - \$6.2 million for wildlife restoration and hunter education

### Glacial Ridge National Wildlife Refuge

The nation's newest national wildlife refuge, Glacial Ridge NWR, is located in northwestern Minnesota and is an example of the Service's commitment to partnerships for on-the-ground conservation efforts. The Nature Conservancy in October 2004 transferred more than 2,300 acres of native prairie and wetlands to the Service as the first piece of the 35,000-acre Glacial Ridge NWR. The donated land is a portion of the 24,140 acres the Conservancy owns within the refuge.

Since 2000, the Conservancy and more than 30 partners have been working together to restore thousands of acres of northern tallgrass prairie and wetlands at the site. It is the largest tallgrass prairie and wetlands reconstruction project in the nation. Establishing this refuge ensures public recreational access and protects important habitat for migratory waterfowl and ground nesting birds.

### Protecting Endangered Species

The Twin Cities Ecological Services Field Office works to conserve and protect the 16 federally listed endangered, threatened or candidate species in Minnesota. Actions to save these species from extinction result

in improved water quality, preservation and restoration of natural areas, clean up of contaminants, and restoration of degraded rivers and streams.

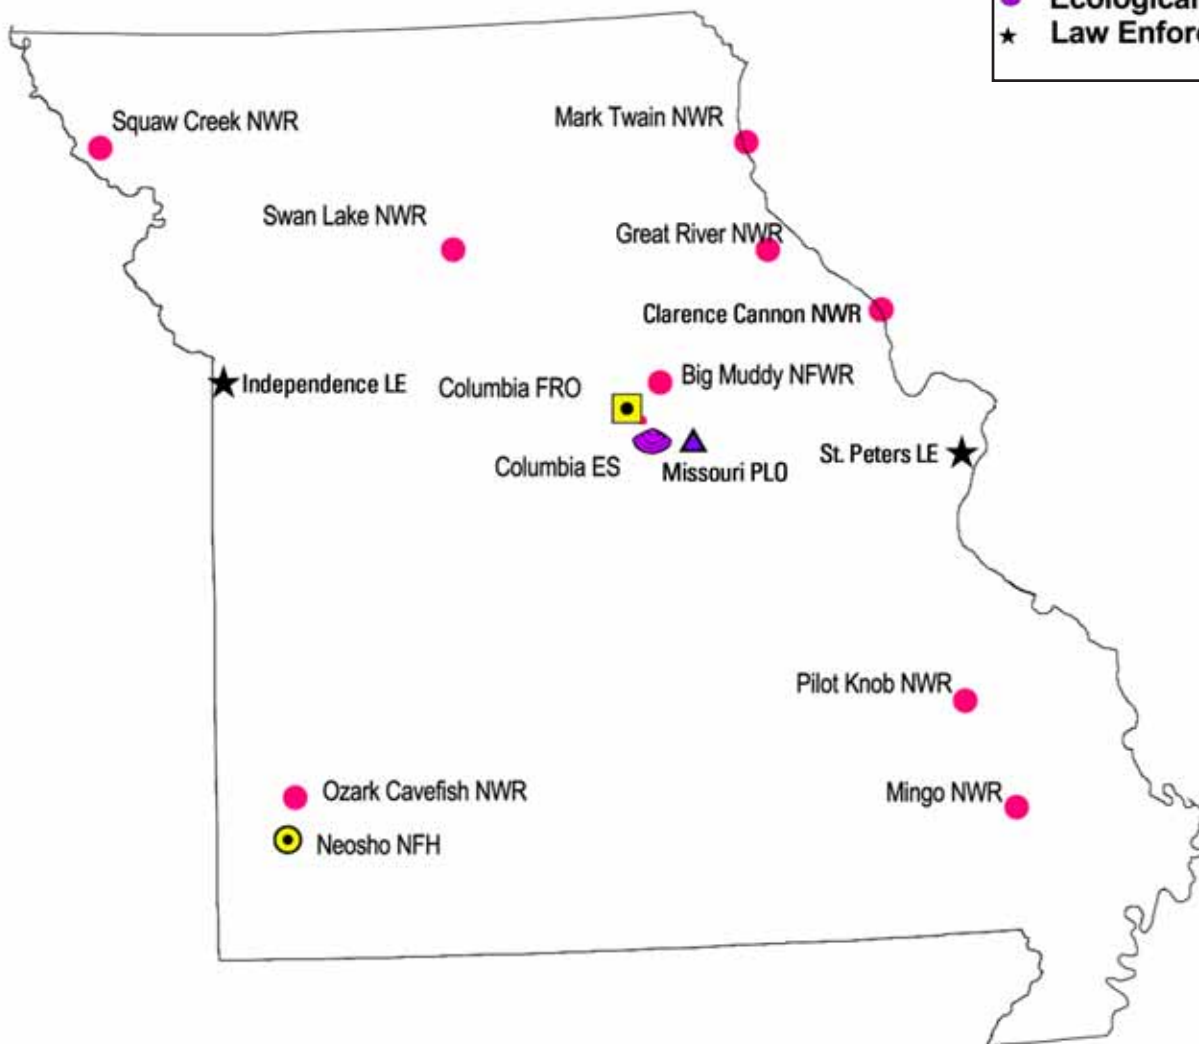

The Service leads recovery work for the winged mapleleaf, an endangered species considered to be one of the rarest freshwater mussels in North America. The Twin Cities Ecological Services Field Office works with researchers from the University of Minnesota, Minnesota Department of Natural Resources, USGS, the La Crosse Fishery Resource Office, and National Park Service. Recent accomplishments include identifying channel catfish and blue catfish as suitable hosts, undertaking river studies to ensure artificial propagation and reintroduction follows the mussels' natural cycle, and monitoring range expansion of invasive zebra mussels.

## *Fish and Wildlife Service Highlights*

### Quick Facts

#### 2004 Missouri State Facts

- Employment: The Service employs more than 60 people in Missouri
- The Fiscal Year 2004 Resource Management budget for Service activities in Missouri totaled \$6.2 million
- Ten National Wildlife Refuges in Missouri total more than 70,000 acres
- In 2004, more than 239,000 people visited national wildlife refuges in Missouri to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

- In 2004 Missouri received:
  - \$8.4 million for sport fish restoration
  - \$6.4 million for wildlife restoration and hunter education

### Missouri River Endangered Species

The Columbia Field Office helped develop a biological opinion on the impacts of Missouri River dams and navigation operations on endangered and threatened species. The Service provided the U.S. Army Corps of Engineers with an assessment of threats to endangered species — including the pallid sturgeon and least tern — and provided recommendations to minimize impacts as river operations continue.

### Conserving Mississippi River Wetlands

The Columbia Field Office continues to provide input to the Corps of Engineers on the impacts of a proposed flood control project along the Mississippi River that would jeopardize the state's last remaining wetland connected to the river. The Service has provided information on expected impacts of the project and alternative ways to accomplish project purposes while conserving irreplaceable wetland habitat for fish and wildlife.

### Bagnell Dam

The Columbia Field Office is participating in a review of the Osage Hydroelectric Relicensing Project, specifically Bagnell Dam, which created Lake of the Ozarks. The

office participates in stakeholder meetings and works closely with the Missouri Department of Conservation and others to address the loss of endangered freshwater mussels below the dam.

### Keeping Communication Open

The Columbia Missouri Field Office reviews 300 to 500 cellular communication tower projects each year. The Columbia Office has come up with a streamlined process to review projects so that delays are avoided while impacts to migratory birds are considered. The streamlined process has provided an effective outreach and education tool that is paying off in a noticeable reduction in the number of cell towers posing threats to migratory birds. Feedback indicates communications companies are building more migratory bird friendly cell towers in Missouri as a direct result of Columbia's streamlined review and concurrence process.

## U.S. Fish & Wildlife Service

# Ohio

## *Fish and Wildlife Service Highlights*

### Quick Facts

#### 2004 Ohio State Facts

- The Service employs 26 people in Ohio
- The Fiscal Year 2004 Resource Management budget for Service activities in Ohio totaled \$2 million

#### National Wildlife Refuge Facts

- Three National Wildlife Refuges in Ohio total more than 8,800 acres
- In 2004, more than 268,000 people visited national wildlife refuges in Ohio to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

In 2004 Ohio received:

- \$10.2 million for sport fish restoration
- \$4.4 million for wildlife restoration and hunter education

Wildlife Restoration Act funds have helped Ohio meet its wildlife management goals through significant land acquisitions. One of these acquisitions is the Tri-Valley Wildlife Area, located in Muskingum County. This 16,200-acre reclaimed strip mine was purchased for \$4.5 million and will provide increased recreational activities for the public and additional habitat for wildlife.

### Threatened Snake Returns to Lake Erie Island

Researchers and biologists in 2002 confirmed that the Lake Erie water snake, a threatened species, has returned to Green Island—the first confirmed sighting in more than 20 years. Managed by the Ohio Division of Wildlife as a wildlife refuge, 17-acre Green Island is one of the limestone islands in western Lake Erie on which water snakes were found in the 1930s and 1940s. Surveys in the 1980s and 1990s found no water snakes, but on a visit to the island this July, researchers from Northern Illinois University and Fish and Wildlife Service employees captured 10 Lake Erie water snakes and implanted them with tracking tags. They also observed nine more snakes that were not captured.

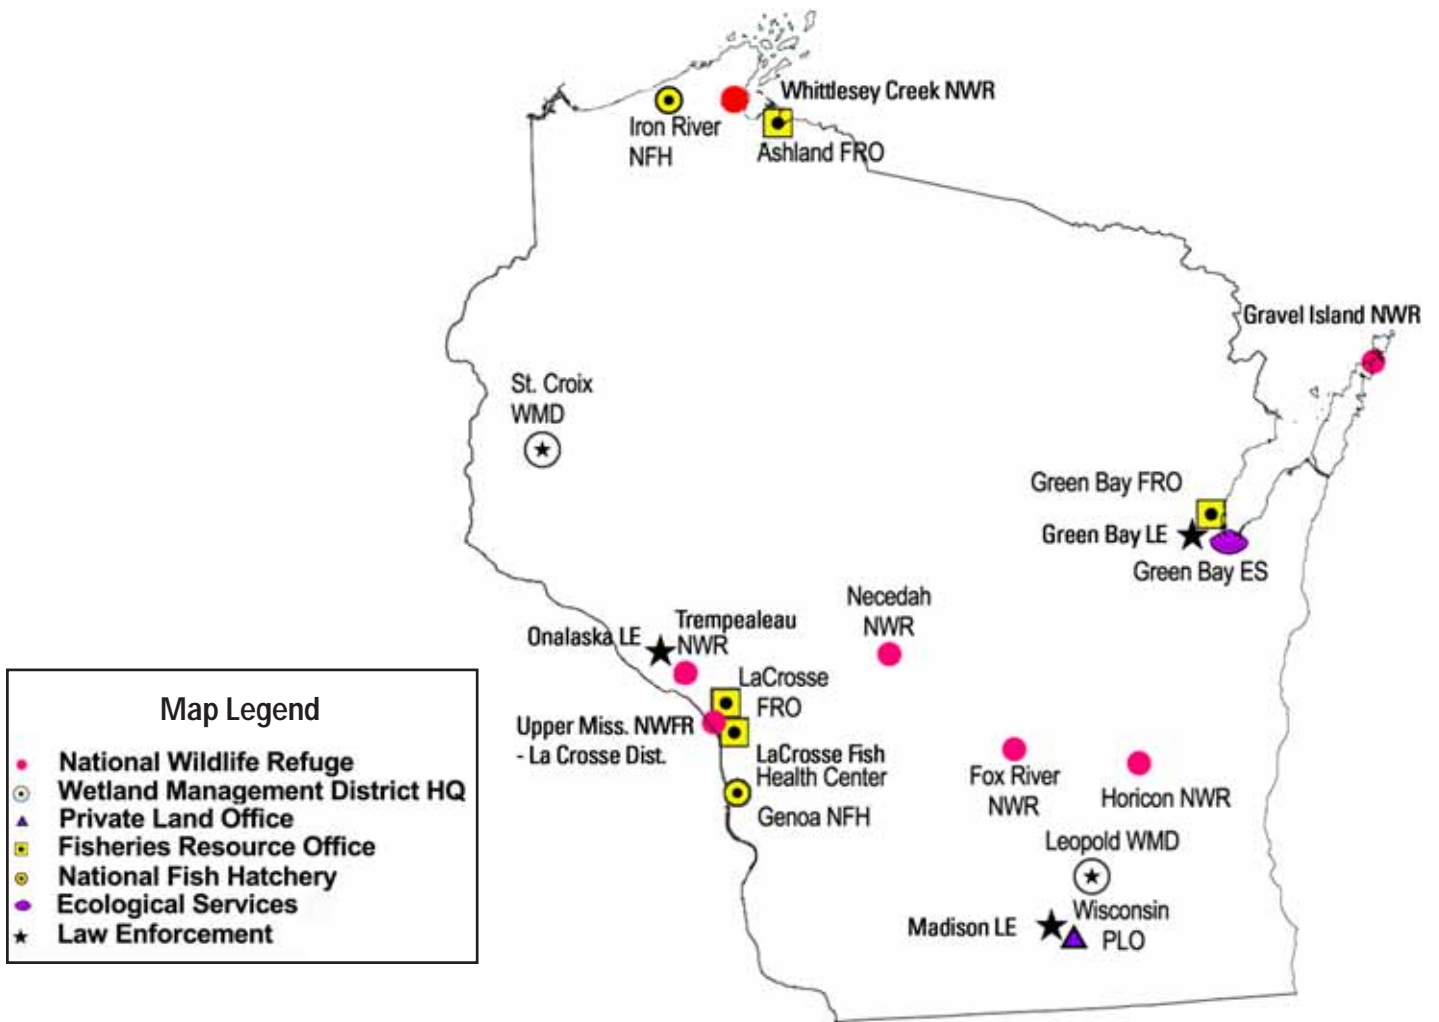

### Ottawa NWR Draws Birds, Visitors, Dollars to Ohio

More than 260,000 visitors flocked to Ottawa National Wildlife Refuge in 2004, many of them to see the songbirds, waterfowl and other bird species that use the refuge and the adjacent state-owned Magee Marsh as stopovers during their long migrations. Visitors to the refuge and the marsh, who pump some \$5.6 million into the local economy each year, are rewarded with miles of hiking trails, many of them disabled accessible, and the opportunity to observe and photograph birds on a refuge that was recently named as a “birding hotspot” by Birder’s World magazine. Construction on a new visitors center/office will begin in 2005.

# Service Facilities in Wisconsin

# Wisconsin

## *Fish and Wildlife Service Highlights*

### Quick Facts

#### 2004 Wisconsin State Facts

- The Service employs more than 160 people in Wisconsin.
- Fiscal Year 2004 Resource Management budget for Service activities in Wisconsin totaled \$10.6 million

#### National Wildlife Refuge Facts

- Eight National Wildlife Refuges and two Wetland Management Districts in Wisconsin total more than 177,000 acres
- In 2004, more than 800,000 people visited national wildlife refuges in Wisconsin to hunt, fish, participate in interpretive programs and view wildlife

#### Contacting Service Offices

See tables at the end of this document

### Federal Assistance to State Fish and Wildlife Programs

In 2004 Wisconsin received:

- \$13.5 million for sport fish restoration
- \$7.7 million for wildlife restoration and hunter education

### Endangered Cranes Summer at Wisconsin Refuge

Necedah National Wildlife Refuge continues to serve as the summer home for members of the only migrating flock of whooping cranes in the eastern United States. In 2001, a flock made its first migration to Florida's Chassahowitzka NWR, and by September 2004, a fourth group of whoopers had gone south. Cranes are led on their first fall migration by ultralight aircraft. They are raised and trained to follow the ultralights at Necedah NWR and now number over 45 birds.

### Protecting Endangered Species

The Green Bay Ecological Services Field Office works to conserve and protect the 19 federally listed endangered, threatened, or candidate species in Wisconsin. Actions to save these species from extinction result in improved water quality, preservation and restoration of natural areas, clean up of contaminants, and restoration of degraded rivers and streams.

### Menominee Indian Tribe Celebrates First Sturgeon Season in More than a Century

The Menominee Indian Tribe of Wisconsin, the U.S Fish and Wildlife Service and the Wisconsin Department of Natural Resources celebrated the first chance for tribal members to harvest lake sturgeon in more than a century.

When two dams were placed downstream on the Wolf River in the 1880s and 1920s, lake sturgeon could no longer move upstream onto the reservation. To allow for harvest of sturgeon once again on the reservation, the Service has stocked more than 56,000 lake sturgeon into Legend Lake since 1994 to establish a sturgeon fishery. Annual fishery assessments now indicate that there are substantial numbers of lake sturgeon over 40 inches in length to provide a limited fishery season for tribal members.

# Midwest Region *Regional Office*

## Quick Facts

### Office Facts
