2004		20,500	98,600	11,800			140,000	3,470	2,990	595,000
2005		19,400	84,700	9,650			130,000	2,690	2,240	622,000
2006		19,800	75,300	12,300			120,000	3,090	2,500	689,000

<sup>1</sup>Compiled by C.A. DiFrancesco (retired) and D.A. Kramer.

Data are calculated, estimated, or reported. See notes for more information.

## Magnesium Metal Worksheet Notes

### Data Sources

The sources of data for the magnesium metal worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR); Mineral Commodity Summaries (MCS); and Metal Prices in the United States through 1998 (MP98). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data either were not available or were withheld because they are proprietary.

### Primary Production

Production data were for magnesium metal in the United States. Magnesium was first produced commercially in the United States in 1915. Data were from the MR and the MYB. Data were withheld for the years 1974 and 1999–2006 in order to avoid disclosing proprietary data.

### Secondary Production

Secondary production includes old scrap only (scrap including—but not limited to—metal articles that have been discarded after serving a useful purpose). Data were from the MR and the MYB. Blank cells in the worksheet indicate that data were not available for the years 1915–40.

### Imports

Import data report the amount of magnesium metal imported into the United States. Data were from the MR and the MYB. Blank cells in the worksheet indicate that data were not available for the years 1915–17.

### Exports

Export data report the amounts of magnesium metal exported from the United States. Data were from the MR and the MYB. Blank cells in the worksheet indicate that data were not available for the years 1915–27.

### Government Shipments

Government shipment data were for shipments from the government stockpile. Data were from the MR and the MYB. Blank cells in the worksheet indicate that data were not available for the years 1915–62 and 1975–2006.

### Stocks

Stocks data report the amount of magnesium metal held in stocks at the end of the year. Data were from the MR and the MYB. Blank cells in the worksheet indicate that data were not available for the years 1915–42 and 1944–52. Data were withheld for the years 1974 and 1999–2006 in order to avoid disclosing proprietary data.

### Apparent Consumption

Apparent consumption was estimated for the years 1915–98 by using the formula:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRIMARY + SECONDARY)} + \text{IMPORTS} - \text{EXPORTS} \pm \text{GOVERNMENT SHIPMENTS} \pm \text{STOCK CHANGES.}$$

Due to the proprietary nature of the data, apparent consumption was estimated by regression for the years 1974–75 to two significant figures. Rounded apparent consumption from the MCS was used for the years 1999–2006.

### Unit Value (\$/t)

Unit value is the value in dollars of 1 metric ton (t) of magnesium metal apparent consumption. Unit value for 1915–98 was estimated for the United States in actual dollars by using price data from the MP98 for primary magnesium. Unit value for 1999–2006 was from the MYB.

### Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

### World Production

World production data were for primary magnesium produced. Data were from the MR and the MYB. Blank cells in the worksheet indicate that data were not available for the years 1915–36.
