

The Fatalities

As of 12/28/2006
25 miners have been
fatally injured.

Best Practices

- Take the **TIME** to work safely. Do not hurry.
- **Plan work tasks to eliminate exposure to all possible hazards.**
- Block machinery components against hazardous motion before performing maintenance work.
- **Provide and maintain safe access to all working places.**
- Persons experienced in examining ground conditions must conduct an inspection in the area prior to work commencing, after blasting, and as conditions warrant throughout the shift.
- **All miners must be trained in and follow safe work procedures.**
- When there is a danger of falling, wear safety belts and lines.
- **Always wear your seatbelt.**
- Stay alert to all of the work occurring around you.

Safety is not a goal, it's a way of life!
