

**minecom**

***The leader in Mine Communications***

**Thank you for the opportunity of  
speaking before you today on the  
subject of -**

# **Wireless Communications and Tracking in a Mining environment**

MCA1000 - VHF  
MCA2000 - UHF  
MCA3000 - 800MHZ  
MCA4000 - 2.4GHZ

**MINECOM**  
the leader in mine communications.

the leaky feeder people™

A brief introduction to

minecom

**minecom** holds  
ISO9001-2000  
quality assurance  
certification from SGS

**minecom** has offices and factories in Australia and South Africa, with distributors located around the world.

**We are represented in the USA by-**

*Pyott-Boone Electronics*

**a world renown company in the field of mining  
electronics equipment**

**MineCom has been  
designing &  
manufacturing products  
for the mining industry  
for the last 19 years**

- **Leaky Feeder Backbones**
- **Wireless Automations Systems**
- **Personnel & Vehicle Tracking Systems**
  - **Block-Light Systems**
  - **Heavy Duty Radios**
  - **Collision Avoidance**
- **Traffic Management Systems**

# **“Redundant Communications to protect a mines Assets”**

# 'ASSET'

One dictionary quotes the following –

**An asset is a resource having economic value that a corporation controls with the expectation that it will provide future benefit.**

## **'People are Assets'**

**....therefore they MUST be protected, so that they can continue to provide 'future benefit' to the corporation they work for**

# 'Redundancy'

Dictionary quotes in relation to *Electronics*

- + Duplication or repetition of elements in electronic equipment to provide alternative functional channels in case of failure
  
- + a system design that duplicates components to provide alternatives in case one component fails

# 'Redundancy'

Dictionary quotes in relation to *Electronics*

- + Repetition of parts, or all of a message, to circumvent transmission errors.
- + Repetition of messages to reduce the probability of errors in transmission

# TENDER

## Mine Communications System

Moncks Mining Corporation requires a 'fully redundant' communications system for their Moncks No. 1 underground coal mine.

The communications system

MUST BE fully redundant

i.e. continue to operate under all conditions, including explosion/rock fall/ cable break

Contact – Ed Jones

Tel:- 804-363-7112

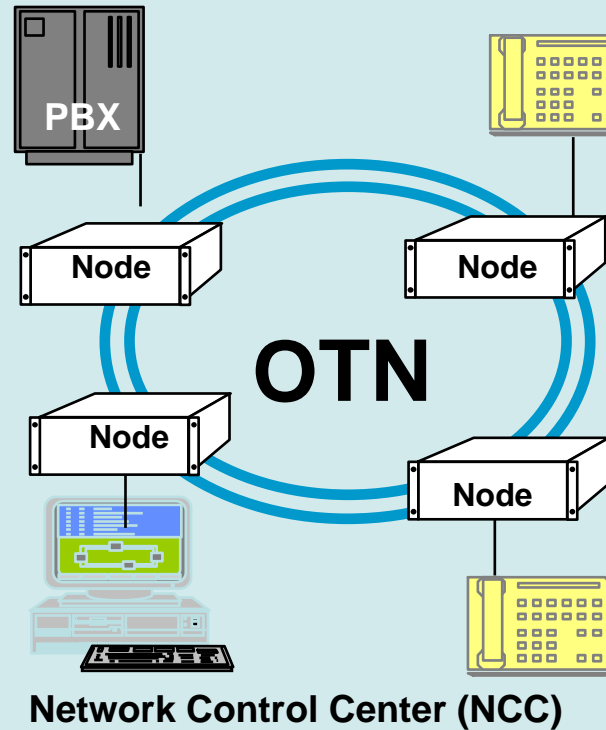

**minecom** introduced  
*RINGFeeder*<sup>®</sup>  
**the first**  
**REDUNDANT**  
**leaky feeder based**  
**communications system**  
**5 years ago**

# Similar to a Fibre Optic Self Healing Ring Architecture

...if the fibre ring was broken, the traffic would be automatically routed around the cable break.

In 2005 mineCOM introduced  
*SMARTReverse*  
the **FIRST**  
**FULLY REDUNDANT**  
leaky feeder based  
communications system

# ***SMARTReverse***

**was originally developed for  
main line rail tunnel networks,  
to provide continuous  
communications under all  
conditions**

**For *SMARTReverse* to be  
'fully redundant'  
there must be at least  
(2) TWO egress points  
into the underground tunnel  
network**

**Secondary egress can be via a –**

- **Return Air Shaft**
- **Skip or Cage shaft**
- **Escape way shaft**
- **Vehicle decline**
- **Bore Hole**

**The bore hole can be as small as 4 inches dia, it only needs to carry one or 2 cables**

SMARTReverse... **NO** - only one egress point

# SMARTReverse.....YES - TWO egress points

# SMARTReverse.....YES - TWO egress points

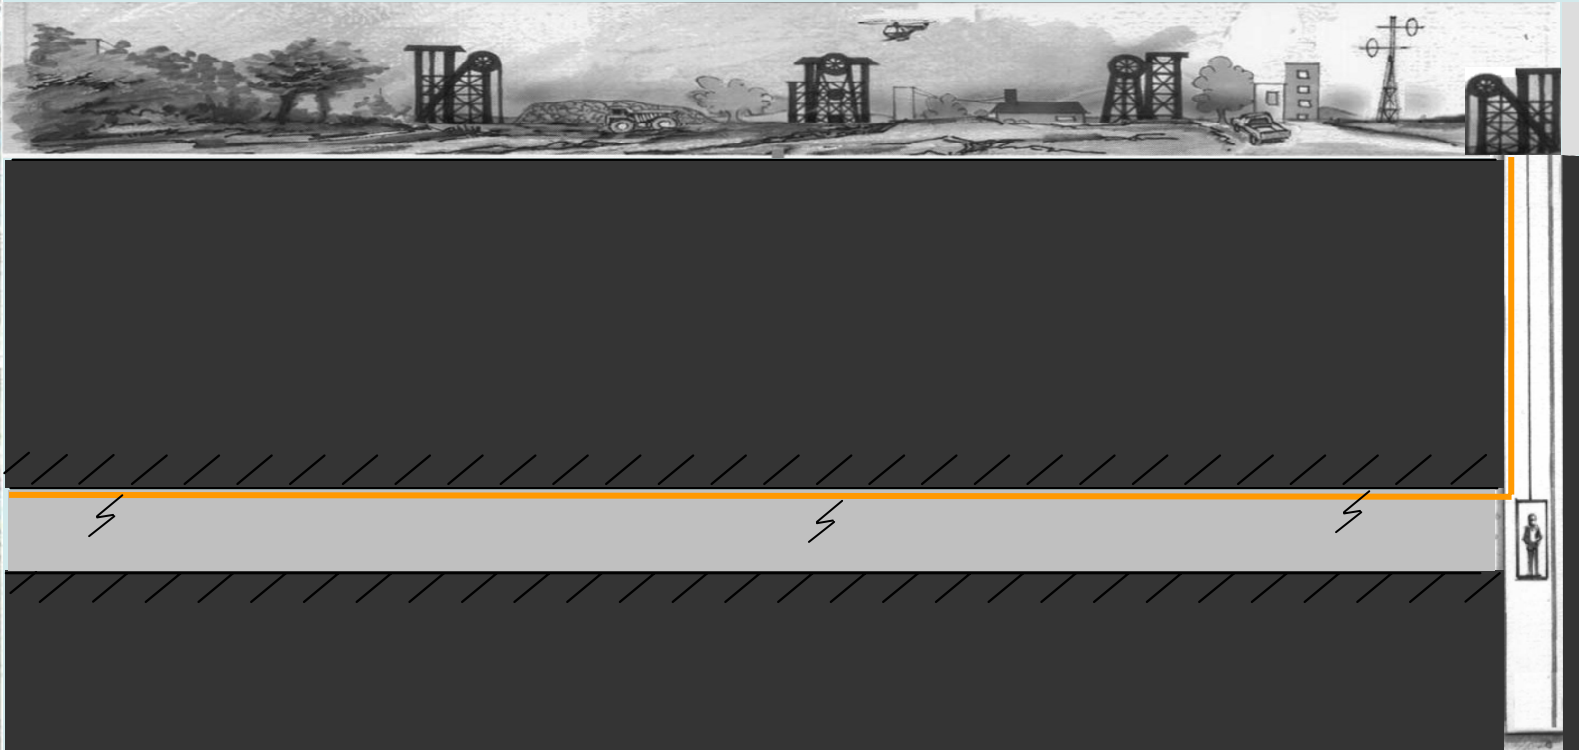

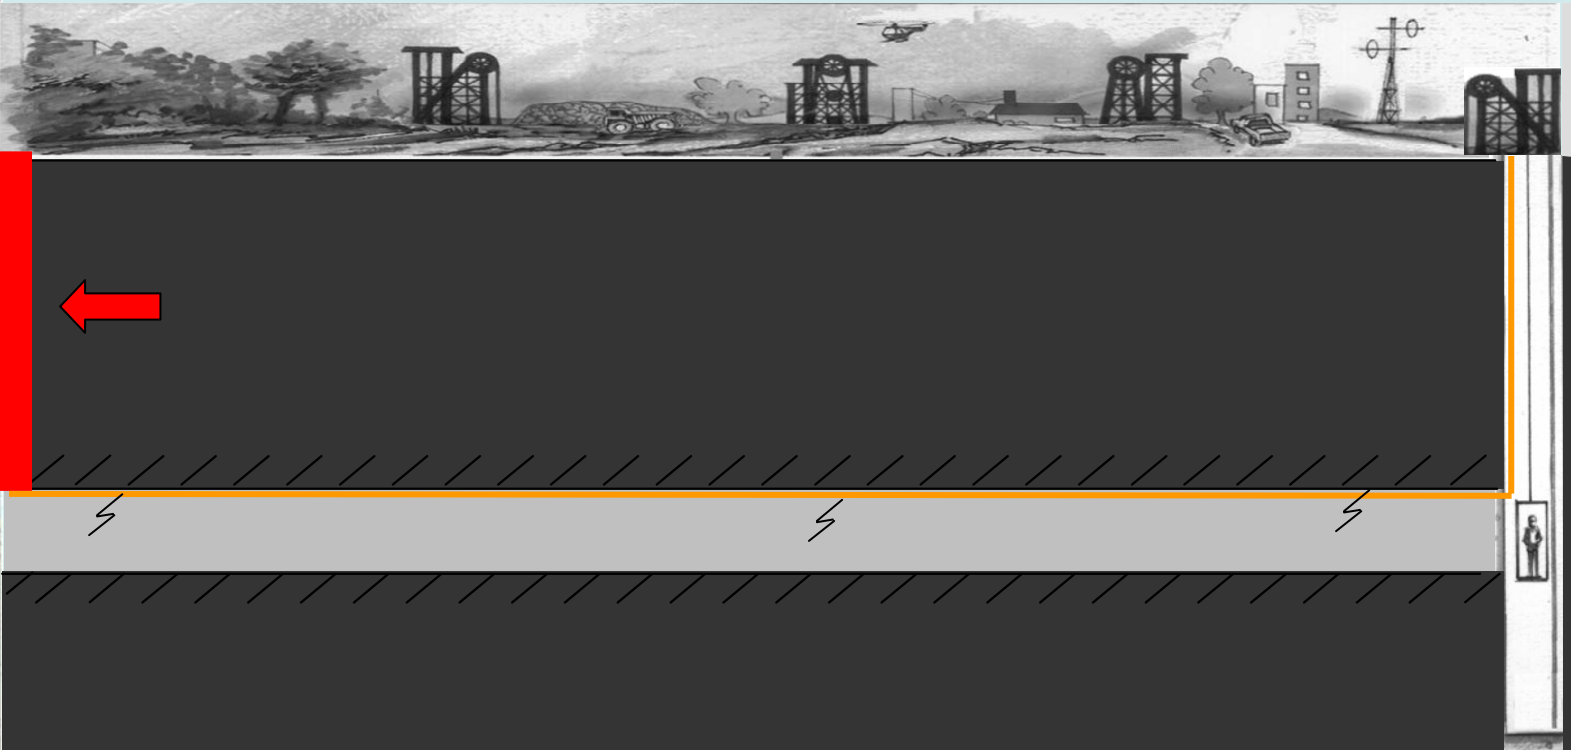

SMARTReverse... **NO** - one egress point only

# With only one egress point SMARTReverse cannot operate in this mine

# Option 1

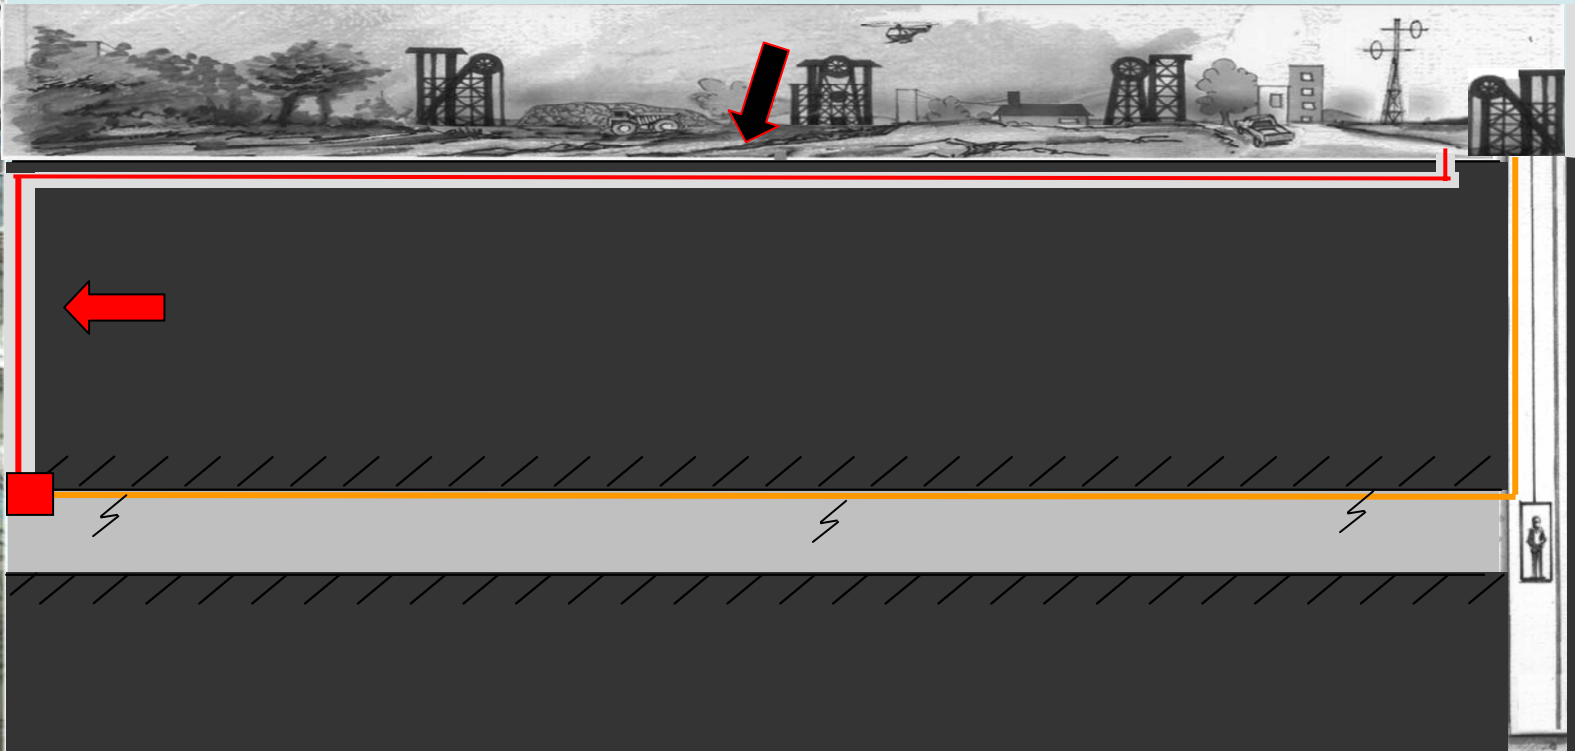

**Drill a 4 inch bore hole from the surface down to the working level to provide the return path for SMARTReverse**

The leaky feeder cable can then be run from the underground to the surface

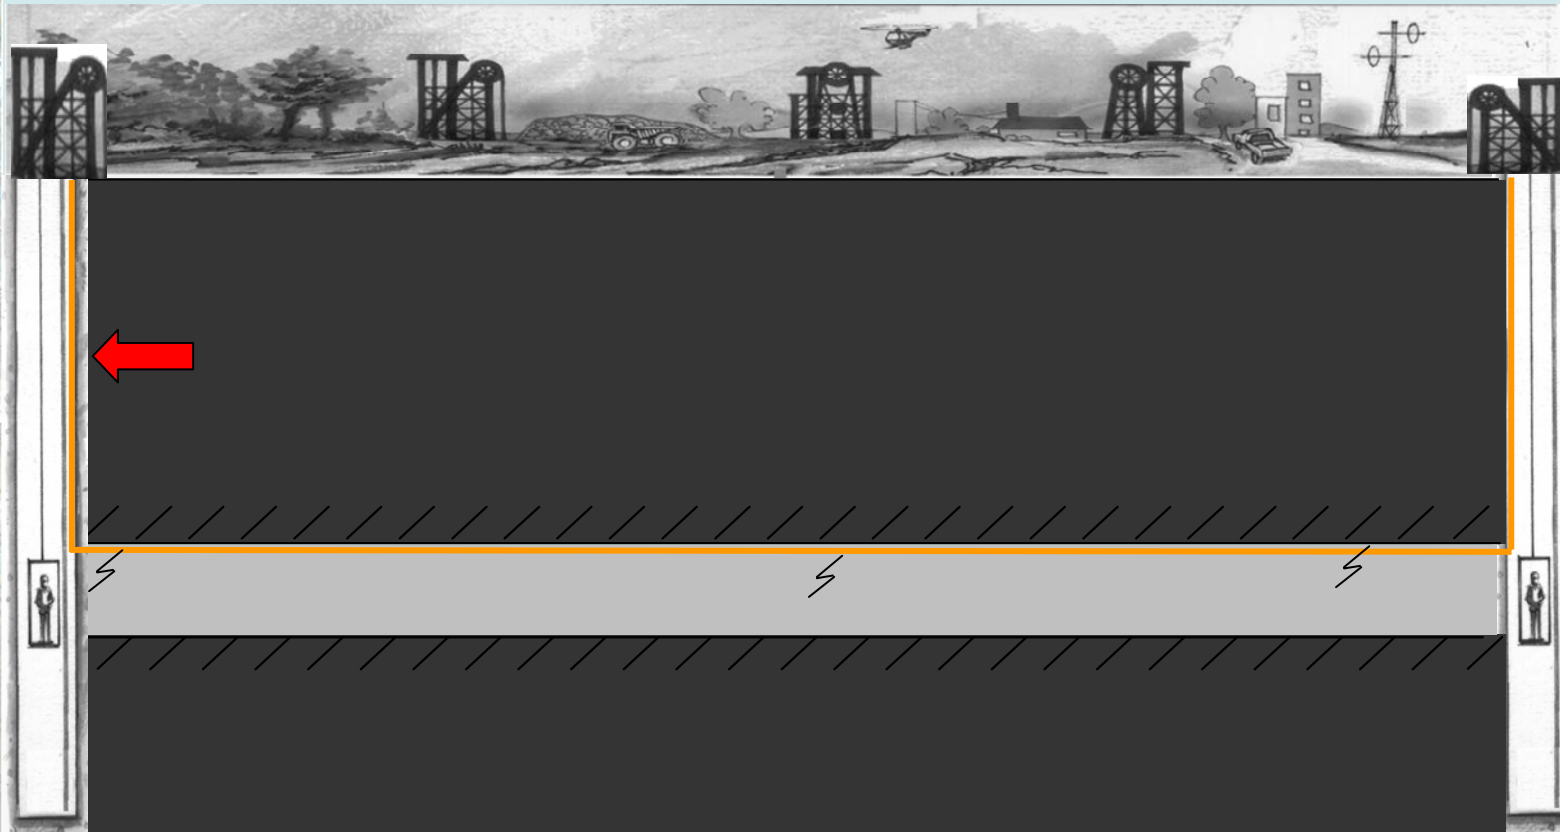

...and could then be run strung from poles back to the main shaft, which would also provide additional surface cover

Alternately the leaky feeder cable could be interfaced to a fibre optic cable (RF to Fibre interface) and run up from underground to the surface

The fibre optic cable could be run in a trench back to the main shaft, however this method would not enhance RF surface coverage

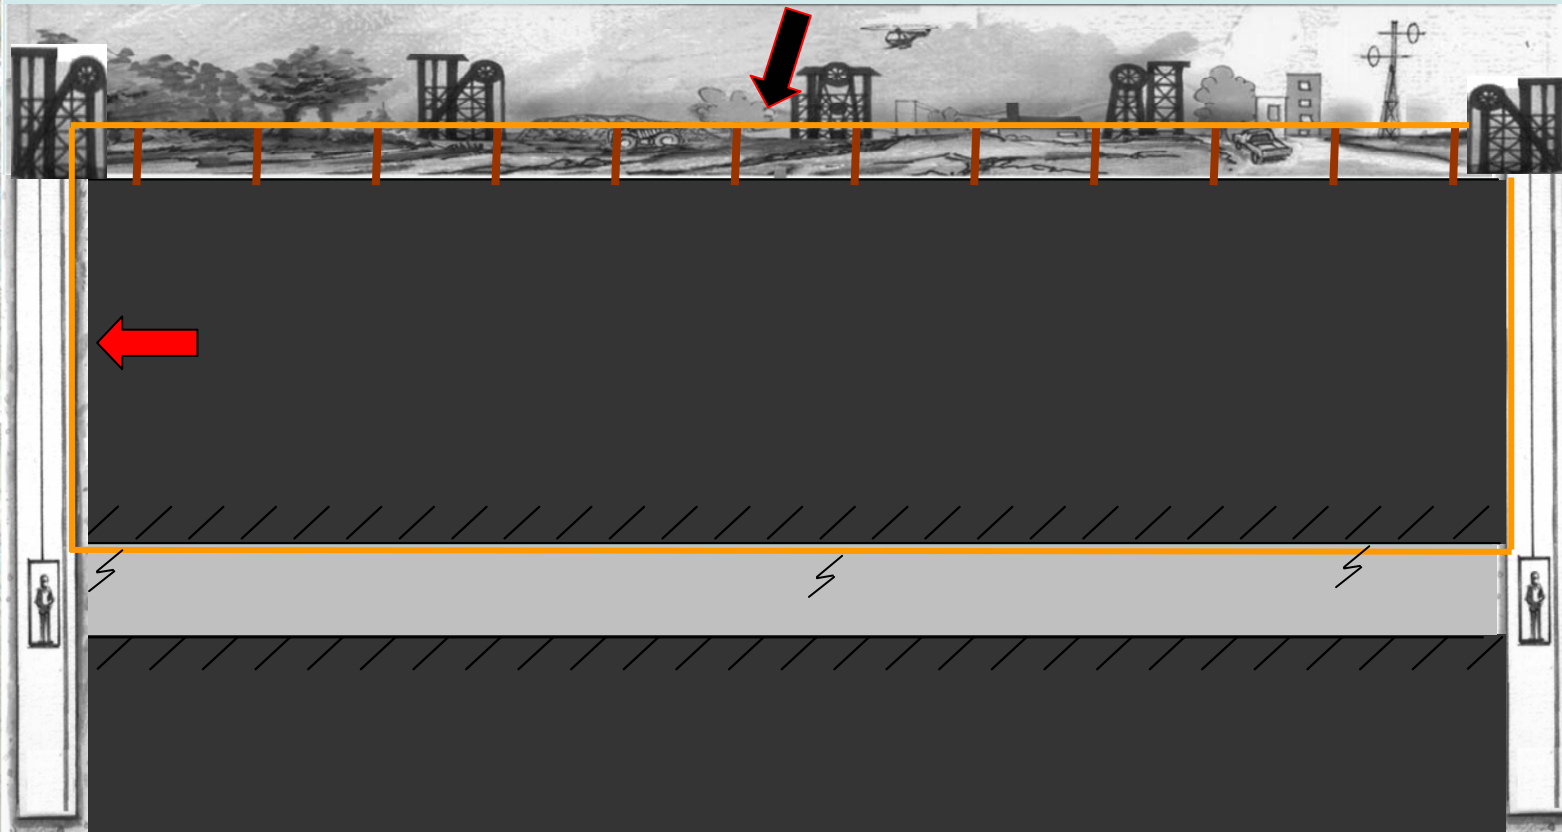

## Option 2

**Utilise second shaft to provide the return path for *SMARTReverse***

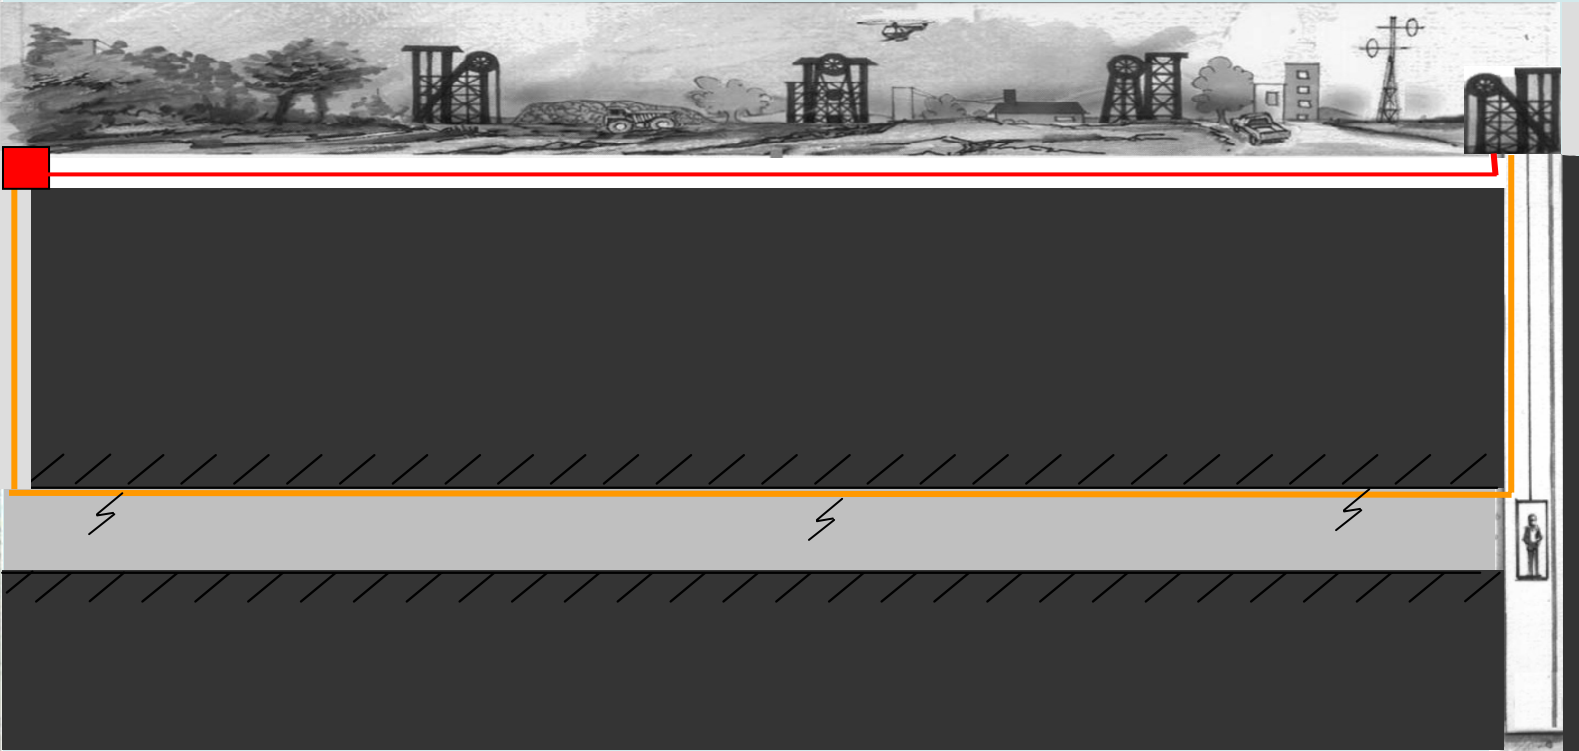

The leaky feeder cable can then be run up the shaft from the underground to the surface

...and could then be run strung from poles back to the main shaft, which would also provide additional surface cover

# SMARTReverse

**OR.....Interface it to the mines fibre optic network**

The *SMARTReverse* return path  
can be via use of a –

- Leaky Feeder cable
- Fiber Optic Cable
- Wireless Link

Even the old faithful -

- Copper Cable (pairs)

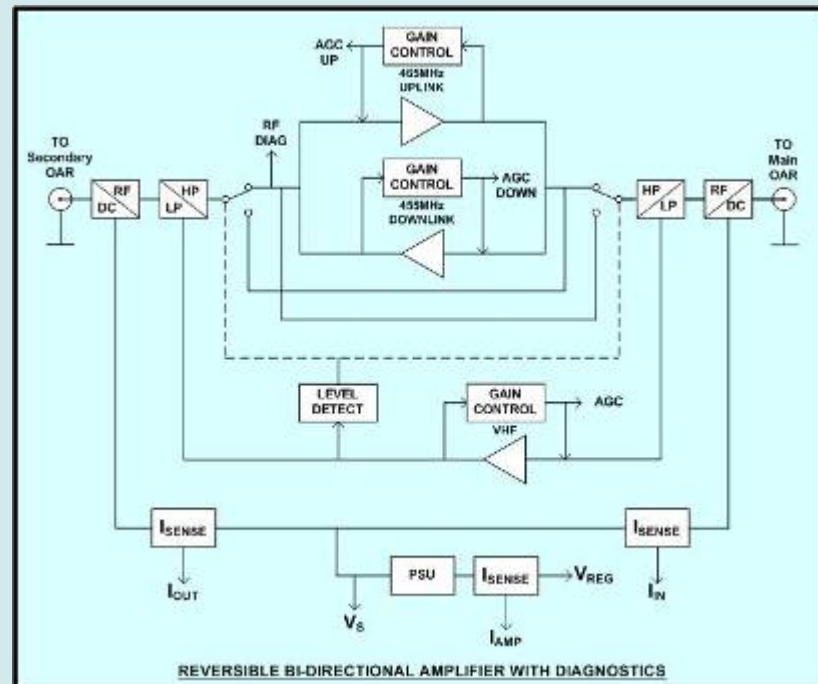

**The minecom *SMARTReverse* is a Reversible Bi-Directional Amplifier using custom-built\* helical filters to provide selectivity & act as duplexers to provide sufficient isolation between the UPLINK and DOWNLINK paths.**

**\* in UHF frequency bands only**

Should the cable be damaged, single pole double throw RF switches, with high isolation characteristics 'electrically reverse' the normal uplink and downlink RF paths of the Amplifier.

REVERSIBLE BI-DIRECTIONAL AMPLIFIER WITH DIAGNOSTICS

***SMARTReverse* is a fault tolerant leaky feeder system that can operate in the harsh mining environment & provide reliable communications ....on both sides of a damaged cable.**

**The direction of the Bi-Directional Amplifier is controlled by the presence, or absence, of a 'control tone', which emanates from the *SMARTReverse* Controller, located in the Head End rack.**

**The *SMARTReverse* 'control tone' is transmitted downlink (@141.745 MHz standard) & is amplified or boosted, as it passes through each individual amplifier.**

**SMARTReverse amplifiers are equipped with ‘drive-by’ diagnostics in the form of ultra bright LED’s indicating the condition of the amplifier to staff as they pass by.**

**An optional, PC based diagnostics package is available to monitor key parameters of the amplifiers and power couplers for remote monitoring of the system from a surface control room.**

**Windows® based software allows control room staff to monitor the health of the system 24 hours a day.**

***SMARTReverse* is presently available in FOUR versions.....**

**MCA1000SR – VHF band.....150 to 175Mhz**

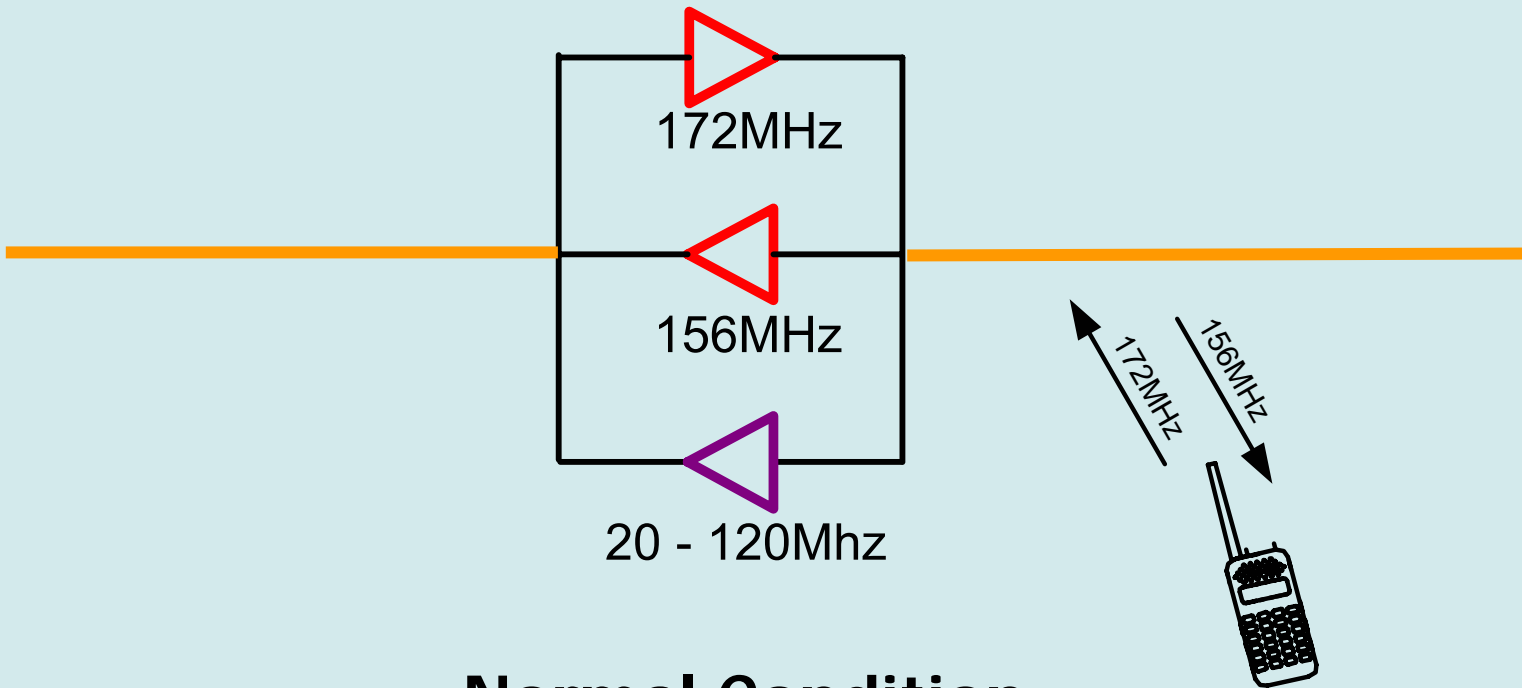

**MCA2000WSR – UHF wide band...400 to 500Mhz**

**MCA2000NSR – UHF narrow band...400 to 500Mhz**

**MCA3000NSR – UHF wide band...800 to 900Mhz**

## SMART

### Products

*Many mines only used their  
leaky feeder  
communications backbone  
for voice communications,  
not realising its full  
capability and true  
potential*

*Since **minecom** introduced its range of '**SMART**' products into the market 5 years ago, mines have been adding additional functionality and services to their leaky feeder backbones....*

# ONE cable carries ALL

**VOICE**

**DATA**

**VIDEO**

**TRACKING**

**TELEMETRY**

**WIRELESS AUTOMATION**

# *SMARTamp* Telemetry

## Control/Monitor

Pumps

Fans

Environmental  
Sensors

Sub Stations

Remote Alarms

Simply cut the cable and install a  
*SMARTamp* Telemetry unit offering -

**8 x Analogue INPUTS**

**8 x Digital INPUTS**

**8 x Digital OUTPUTS**

# Telemetry SMARTamp

...SMARTamp's will continue to operate on **BOTH** sides of a blast or cave in.

# *SMARTCam* Video

## MONITOR – VIEW...

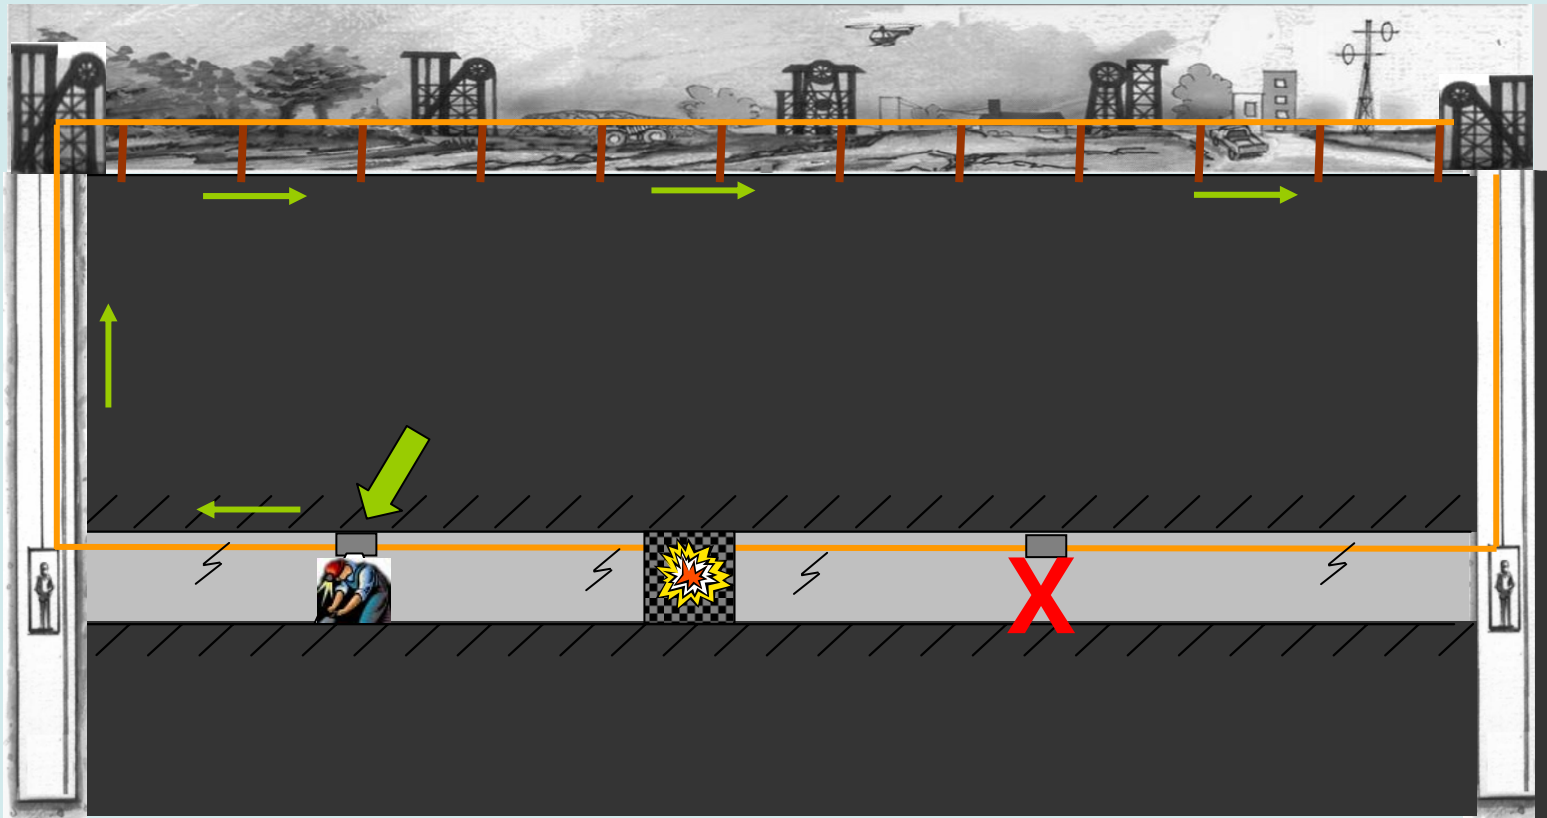

- Assembly Points
- Rescue Chambers
- Conveyor belts
- Sub Stations
- Remote Locations

Simply cut the cable and install a  
*SMARTCam* Video camera unit offering -

Real-Time video B & W, colour or thermal images  
from underground back to the surface

# Video *SMARTCam*

...*SMARTCam*'s will continue to operate on the **DOWN** side of a blast or cave in.

# *SMARTTrak* Tracking

Personnel Tracking  
Vehicle Tracking  
Track Mobile Plant  
& Equipment

Simply cut the cable & install a *SMARTTrak* Tracking unit offering -  
Real-Time tracking/location/direction of personnel & vehicles underground & on the surface

# Tracking & Location *SMARTTrak*

...*SMARTTrak* readers will continue to operate on BOTH sides of the blast/cave in, cable break.

# *SMARTCage* Automation

Two Way Voice  
Communications

Emergency Stop

Monitoring functions

Control functions

Knocker Bell

Shaft Maintenance

**SMARTCage** – provides real time Automation or  
Semi Automation over a Cage and/or Skip

# Automation *SMARTCage*

...SMARTCage will continue to operate on BOTH sides of a blast/cave in.

# minecom offers a range of Passive and Active Tagging Systems

# ePROX

## *Personnel Tracking*

*ePROX electronic Tag Boards used to track the movement of personnel around the mine utilise small electronic tags that do NOT require a battery to power them. A range of models are offered with or without LCD displays.*

# ePROX II

## Personnel Tracking

**Second generation ePROX II Tag Readers with *expanded* range, reads multiple Tags up to 12 meters away simultaneously. ePROX II Tags can be read at speed & DO NOT require a battery to power them. A range of Tag Readers and Tags are offered.**

Up to 12m read range with this antenna

# TeITAG

## Personnel & Vehicle Tracking

*TeITAG* electronic personnel and vehicle tracking system utilise small electronic transmitters (tags) that are powered from a miners caplamp, or small lithium battery to power them. A range of models are offered which can be used for tracking people, vehicles

# LAMPS

## Personnel Tracking

**LAMPS IS approved electronic personnel tracking system utilises small self contained electronic transmitters (tags) that are powered from a small internal lithium battery. Tag readers can be linked by Fibre or Wireless.**

# *Termite II*

A rugged vehicle radio designed for open cab mine vehicles –  
Waterproof – IP66  
Heavy duty, shock proof  
12 or 24VDC powered  
Emergency Evacuation alarm  
Back lite LCD display and keypad

# TermiteFAB

*A rugged wall mounted radio designed for wall mounted installation in underground mine tunnels*

- *Waterproof – IP66*
- *Heavy duty, shock proof*
- *110/240VAC powered.....OR*  
*Leaky feeder cable powered version*
- *Emergency Evacuation alarm*
- *Back lite LCD display and keypad*

# minecom GUARANTEE

**minecom** provides a written guarantee that wherever you install a **minecom** leaky feeder system to an approved design criteria, good quality Voice, Data and Video communications are guaranteed
