¹ Preliminary. ² Includes other items not shown separately. ³ Includes lease and plant fuel. ⁴ Emissions from the electric power sector are distributed to the end-use sectors. ⁵ Includes emissions from geothermal power and nonbiogenic emissions from municipal solid waste.

⁶ Fuel consumption includes energy for combined-heat-and-power plants (CHP), except those plants whose primary business is to sell electricity, or electricity and heat, to the public. ⁷ This includes carbon dioxide from international bunker fuels, both civilian and military, which are excluded from the accounting of carbon dioxide emissions under the United Nations convention.

⁸ Includes pipeline fuel natural gas and compressed natural gas used as vehicle fuel.
