

Valley at an elevation of approximately 3,000 feet. The proposed project area is accessible by the Walker Ridge Road, a BLM maintained road that runs north from its junction with State Highway 20. The proposed wind power development area application encompasses approximately 8,200 acres of public lands. On June 2, 2003, GE Wind Energy received a site testing and monitoring right-of-way grant from BLM to study the wind power potential of the project area for a period of three years. Five meteorological towers with anemometers to measure wind characteristics are currently installed on Walker Ridge. No private lands would be utilized for the project. The legal description of the land proposed for the wind power development project is available from the contact information in this notice.

Tentatively identified issues of concern may include: threatened, endangered, and sensitive species; visual resources; loss of wildlife habitat; land use conflicts; and avian mortality. An interdisciplinary approach will be used to develop the plan amendment in order to consider a variety of resource issues and concerns identified. Disciplines involved will include specialists with expertise in archaeology, wildlife, outdoor recreation, visual resources, biology, soils, and realty. BLM has preliminarily identified the following, possible planning criteria:

- Comply with applicable laws, Executive Orders, and regulations,
- Consider all alternatives in the context of their consistency with the President's National Energy Policy, BLM's Interim Wind Energy Development Policy, and State of California Renewable Energy Portfolio Standards.

The Plan Amendment and EIS will analyze the Proposed Action and the No Action Alternative. Other alternatives may include modifying proposed tower/turbine locations, road and power cable and line locations, rerouting linear electric power line right-of-way locations, as well as applying mitigating measures to reduce or eliminate impacts.
