Background

This proposed revision to TSO-C38d includes the latest TSO boilerplate language. This language incorporates a Functionality definition used to specify the Function Hazard Classification. Furthermore, the data required with the TSO application has been slightly modified to include:

a. The minimum operational performance standards defined by RTCA/DO-186A, "Minimum Operational Performance Standards for Airborne Radio Communications, Equipment Operating Within the Radio Frequency Range 117.975-137.00 Mhz," Section 2.0, dated October 20, 1995, including Change 1, dated September 29, 1998, and Change 2, dated March 5, 2002.

b. The minimum requirements of 8.33 kHz channel spacing receivers (Class E) as defined by RTCA/DO-186A, including Changes 1 and 2, while retaining requirements of 25 kHz channel spacing receivers (Class C and D) of TSO-37d.

c. By reference to RTCA/DO 186A, including Changes 1 and 2, addresses electromagnetic compatibility with the Global Navigation Satellite System (GNSS0).

d. The environmental conditions and test procedures specified in RTCA/DO-160D, including Changes 1, 2, and 3.

The basic TSO provide minimum performance standards for VHF radio communications receiver equipment. Incorporated with this standard are equipment characteristics that should be useful to users, designers, manufacturers, and installations of VHF radio communications receiver equipment.
