OFFICE OF THE
DIRECTOR

LETTER OF TRANSMITTAL

Dear Mr. President:

It is my honor to transmit to you the Detailed Statistical Tables report, *Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions: Fiscal Year 2003*, in accordance with the National Science Foundation Act of 1950, as amended.

Respectfully yours,

A handwritten signature in black ink, appearing to read 'Arden L. Bement, Jr.'.

DIVISION OF SCIENCE RESOURCES STATISTICS

The Division of Science Resources Statistics (SRS) fulfills the legislative mandate of the National Science Foundation Act to ...

provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources and to provide a source of information for policy formulation by other agencies of the Federal Government...

To carry out this mandate, SRS designs, supports, and directs periodic surveys as well as a variety of other data collections and research projects. These surveys yield the materials for SRS staff to compile, analyze, and disseminate quantitative information about domestic and international resources devoted to science, engineering, and technology.

If you have any comments or suggestions about this or any other SRS product or report, we would like to hear from you. Please direct your comments to:

National Science Foundation

Information and data from the Division of Science Resources Statistics are available on the Web at <http://www.nsf.gov/statistics/>. This report is available in electronic format only. For NSF's Telephonic Device for the Deaf, dial toll-free (800) 281-8749 or (703) 292-5090.

FOREWORD

Institutions of higher education, the major source of the Nation's scientists and engineers, perform about one-half of the Nation's basic research. Therefore, the level, distribution, and characteristics of federal academic support are of much interest to officials at federal, state, and local levels and in nongovernmental sectors.

The National Science Foundation Act of 1950, as amended, requires that the Foundation “. . . initiate and maintain a program for the determination of the total amount of money for scientific and engineering research, including money allocated for the construction of the facilities wherein such research is conducted, received by each educational institution and appropriate nonprofit organization in the United States, by grant, contract, or other arrangement from agencies of the Federal Government, and to report annually thereon to the President and the Congress.”

To fulfill this requirement, the Foundation has utilized the data collection system originally designed by the Committee on Academic Science and Engineering of the Federal Council for Science and Technology. The

Foundation annually collects statistical data from the 18 federal agencies that account for virtually all support for science and engineering (S&E) research and development at educational institutions. Data are also collected on these agencies' obligations to nonprofit institutions.

Since its inception, this survey system has been the sole source of data on federal funding to individual institutions for S&E activities and therefore attracts a wide audience. These data provide information that enables users to examine patterns of support for individual institutions over time and to compare such patterns with those of other institutions.

We are grateful for the continued cooperation of the responsible staff members in the participating agencies, and we appreciate their efforts to assist us in ensuring the quality of their data submissions.

Lynda T. Carlson
Director, Division of Science Resources Statistics
National Science Foundation

ACKNOWLEDGMENTS

The preparation of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions: Fiscal Year 2003 was managed by Richard J. Bennof, Analyst, National Science Foundation (NSF), Division of Science Resources Statistics (SRS), Research and Development Statistics Program (RDS), under the overall direction of John E. Jankowski, Program Director, RDS, with guidance and review provided by Mary J. Frase, Deputy Director, SRS, and Ronald S. Fecso, Chief Statistician, SRS. Rolfe W. Larson and Tanya R. Gore of

the Information and Technology Services Program (ITSP) of SRS provided editorial assistance and final compositions for this report. Peg Whalen, ITSP, oversaw electronic publication. QRC Division of Macro International Inc. (ORC Macro) of Bethesda, MD, under NSF contract number SRS-02-42881, prepared the tables and report copy. ORC Macro staff members who worked on this project were Maggie Carlin, Kevin Greenberg, Jennifer Greer, Gail Henry, Cheryl Lloyd, Donald McMaster, Michael Rossi, Susan Wimmer, and Emily Wuerker.

DETAILED STATISTICAL TABLES: FEDERAL SCIENCE AND ENGINEERING OBLIGATIONS.....	9

GENERAL NOTES

The data presented in these tables cover all categories of direct federal science and engineering (S&E) support for S&E activities to institutions of higher education in the United States. The 18 agencies listed in these tables provide virtually all the federal funding for S&E research and development (R&D) at U.S. universities and colleges. Data are also reported on these agencies' obligations to nonprofit institutions.

The fiscal year (FY) 2003 data in this report were submitted by 18 federal agencies, covering the period October 1, 2002, through September 30, 2003. Because of space constraints, data for nine agencies are often combined and reported in an "other" category in tables that show funding by agency. The nine agencies are the Agency for International Development; Appalachian Regional Commission; Departments of Housing and Urban Development, the Interior, Labor, and Transportation; Nuclear Regulatory Commission; Office of Justice Programs; and Social Security Administration.

The following agencies were included in the other category, because they reported obligations in the variables represented by the table:

Table 9 includes the Departments of Housing and Urban Development, Labor, and Transportation; Agency for International Development; Appalachian Regional Commission; Nuclear Regulatory Commission; Office of Justice Programs; and Social Security Administration.

Table 10 includes the Departments of Labor and Transportation, Appalachian Regional Commission, and Office of Justice Programs.

Tables 12, 13, 14, 16, 24, and 25 include the Departments of Housing and Urban Development, the Interior, Labor, and Transportation; Agency for International Development; Appalachian Regional Commission; Nuclear Regulatory Commission; Office of Justice Programs; and Social Security Administration.

Table 18 includes the Department of Transportation.

Table 21 includes the Departments of Housing and Urban Development, Labor, and Transportation and Office of Justice Programs.

Table 23 includes the Departments of Housing and Urban Development, the Interior, Labor, and Transpor-

tation; Agency for International Development; and Office of Justice Programs.

Table 27 includes the Departments of Housing and Urban Development, Labor, and Transportation; Agency for International Development; Nuclear Regulatory Commission; Office of Justice Programs; and Social Security Administration.

Table 28 includes the Departments of Labor and Transportation; Agency for International Development; Nuclear Regulatory Commission; Office of Justice Programs; and Social Security Administration.

Table 29 includes the Office of Justice Programs.

Table 30 includes the Departments of Housing and Urban Development, Labor, and Transportation; Agency for International Development; Nuclear Regulatory Commission; and Office of Justice Programs.

Table 33 includes the Department of the Interior.

The detailed agency-specific data are available from the National Science Foundation (NSF) upon request. In FY 2003, the 18 agencies reported obligations to 1,109 universities and colleges, 43 academic system offices, and 1,565 independent nonprofit institutions (including 260 research institutes, 120 voluntary hospitals, and 1,185 other independent nonprofit institutions).

Because of rounding, data in the text or tables may not add to the totals or subtotals shown. Reported obligations were rounded to the nearest thousand dollars by the submitting agency.

TECHNICAL NOTES

SCOPE OF SURVEY

Data presented in this report are collected annually through the National Science Foundation's (NSF's) congressionally mandated Survey of Federal Science and Engineering Support to Universities, Colleges, and Non-profit Institutions (federal S&E support survey). The survey originated in 1965, when the Committee on Academic Science and Engineering (CASE) within the Federal Council for Science and Technology established the CASE data collection system to report annually on federal S&E obligations to academic institutions and associated federally funded research and development centers (FFRDCs). Since 1968, CASE data, as well as data on nonprofit institutions, have also served as the basis for an annual report to the President and Congress. This survey is designed to collect information from federal agencies on (1) total S&E program support to academic institutions and (2) research and development (R&D) and R&D plant support to nonprofit institutions. All agencies that report research and development performed by universities and colleges or nonprofit institutions in the NSF Survey of Federal Funds for Research and Development are included in this survey.

A Web-based data collection system (FSSWeb) is used to collect the federal S&E support survey data. FSSWeb is part of NSF's effort to enhance survey reporting and reduce data collection and processing costs by offering respondents direct online reporting and editing. Because the Federal S&E Support data are collected in electronic format, there is no paper instrument. Respondents provide data for each institution using similar data entry screens. The screens change slightly depending on whether the respondent is providing data for academic or nonprofit institutions. The categories of support also are slightly different for Defense and non-Defense agencies. Mock survey instruments have been created to illustrate what information the respondent is asked to provide in FSSWeb. See the Federal S&E Support's survey methodology report for further details on the FSSWeb system.

The Fiscal Year (FY) 2003 data in this report were submitted by 18 Federal agencies, covering the period October 1, 2002, through September 30, 2003.

Agency for International Development
Appalachian Regional Commission
Department of Agriculture
Department of Commerce
Department of Defense
Department of Education
Department of Health & Human Services
Department of Housing and Urban Development
Department of Interior
Department of Labor
Department of Transportation
Department of Energy
Environmental Protection Agency
National Aeronautics & Space Administration
National Science Foundation
Nuclear Regulatory Commission
Office of Justice Programs
Social Security Administration

The data are presented in terms of federal obligations provided for direct support of academic S&E. The data exclude financial support of an indirect nature, such as funds allocated to state agencies, even if the final recipient of such funds are known to be an academic institution. Data on type of institutional control and highest degree granted are not presented in this report but are available upon request (see Data Availability at the end of this section).

Obligations are the amounts for orders placed, contracts awarded, services received, and similar transactions during a given period, regardless of when the funds were appropriated and when future payment of money is required. Obligations differ from expenditures in that funds allocated by federal agencies during one fiscal year may be spent by the recipient institution either partially or entirely during one or more subsequent years.

The obligations listed for individual institutions reflect direct federal S&E support. Thus, amounts subcontracted and subgranted to other institutions are included, but funds received through subrecipient arrangements from prime recipients are excluded.

Obligations are reported to the survey in thousands of dollars. Obligations totaling less than \$500 for any specific activity (e.g., R&D, general support for S&E) are reported as zero.

Obligations are listed as awards to individual institutions within a system (e.g., to the University of California, Los Angeles, rather than to the University of California system as a whole). However, obligations awarded directly to the central administration of a system are listed separately. If the final destination of the funds is not known, the agencies report them as obligations to a system's administrative office from which the funds are distributed to the system's individual institutions.

CHANGES IN REPORTING

Since these data were first collected in 1965, there have been some changes in reporting. The most recent of these include the following:

1. For the FY 2003 survey cycle, the Department of Homeland Security (DHS) was unable to provide S&E obligations (with the exception of the U.S. Coast Guard) broken down into the categories shown in this report. Because the U.S. Coast Guard, formerly part of the Department of Transportation, is now part of DHS, its overall S&E obligation totals are presented below and are not part of the detailed statistical tables.

FY 2003 U.S. Coast Guard

- Total academic S&E: \$2,159,000
- Academic R&D: \$1,824,000
- Academic R&D plant: \$335,000
- Nonprofit R&D: \$924,000

2. Federal academic support in FY 2003 for R&D plant grew by 141 percent, from \$301 million to a record high of \$727 million. The National Institutes of Health (NIH) (within the Department of Health and Human Services) was directly responsible for 90 percent of the academic R&D plant increase. The one-time major investment in academic facilities from NIH (NIH stated that it would not be repeated in FY 2004) was highlighted by increases exceeding \$100 million at both Boston University and the University of Texas Medical Branch at Galveston.

3. Beginning in FY 2000, the National Aeronautics and Space Administration (NASA) reclassified space station as a physical asset and space station research as equipment and transferred funding for the program from R&D to R&D plant. According to NASA, this classification change had a negligible impact on the data reported in this report for FY 2000. However, this classification change was reflected in the FY 2001 academic totals, which showed an R&D plant increase for NASA nearly five times over the FY 2000 R&D plant total (see table 2).
4. Beginning with the FY 1999 survey cycle, the NSF determined that federal agencies would no longer report obligations to academic or nonprofit FFRDCs. Obligations to FFRDCs were deleted from all previous years shown in this report.
5. Beginning with the FY 1996 survey cycle, the NSF determined that federal agencies would no longer report obligations for S&E fields.
6. Since FY 1994, NSF has collected data on Department of Defense (DOD) development dollars in two categories: advanced technology development and major systems development. These categories better differentiate between that part of the federal R&D budget that supports "science and key enabling technologies" (including military and nondefense applications) and that part that primarily concerns "testing and evaluation of large technical systems prior to production" (of mostly defense-related systems).
7. Before FY 1993, NSF published data on a seventh obligations category (see Categories of Support below) covering non-S&E activity. At that time, however, the Department of Education (ED) made major software modifications to the automated system from which its federal S&E data were produced. The revamped coding structure introduced major trend differences for the department's institution data. Consequently, because ED accounted for 91 percent (\$5.9 billion) of the total federal support for non-S&E activities (\$6.5 billion) for FY 1993, NSF no longer publishes non-S&E totals. To explain ED's downward academic R&D trend between FY 1993 and 1994 (from \$95 million to \$49 million), the agency stated that academic R&D programs in FY

1994 either were not funded, did not have an S&E component, or received reductions in funding.

8. During the FY 1987 survey cycle, DOD determined that some funds reported in prior years as R&D obligations to the Johns Hopkins University Applied Physics Lab (APL) were more appropriately classified as “other sciences and engineering.” Data for FY 1984–86 were revised, but DOD was unable to revise data for earlier years. In FY 2003, APL accounted for more than 95 percent of DOD’s total S&E funding of \$348 million to Johns Hopkins.

CATEGORIES OF SUPPORT

The data presented here include all obligations for academic S&E, comprising federal obligations for R&D; R&D plant; facilities and equipment for S&E instruction; fellowships, traineeships, and training grants; general support for S&E; and other S&E activities. These support categories are defined below.

1. R&D includes all direct, indirect, incidental, or related costs resulting from or necessary to performing R&D by private individuals and organizations under grant, contract, or cooperative agreement. Demonstration projects designed to test or prove whether a technology or method is, in fact, workable are considered to be within the scope of R&D if they are designed to produce new information and are accomplished within a given time period. The following activities are excluded from R&D but should be reported under one or more of the other five S&E categories:

- Routine product testing
- Quality control
- Topographical mapping and surveys
- Collection of general-purpose statistics
- Experimental production
- Demonstrations designed to exhibit new technologies or methods or to disseminate information thereon
- Scientific and technical information activities
- R&D facilities and fixed equipment

Research is systematic study directed toward fuller scientific knowledge or understanding of the subject studied. Research is classified as either basic or applied according to the objectives of the sponsoring agency. In basic research, the objective of the

sponsoring agency is to generate knowledge of the underlying foundations of phenomena and of observable facts without specific applications toward processes or products in mind. In applied research, the objective of the sponsoring agency is the creation of knowledge or understanding necessary to determine the means by which a recognized and specific need may be met.

Development is systematic use of knowledge and understanding gained from research directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes.

Research equipment is any item (or interrelated collection of items comprising a system) of nonexpendable tangible property or software having a useful life of more than 2 years and an acquisition cost of \$500 or more that is used wholly or in part for research. Research equipment is included under R&D.

2. R&D plant includes all projects whose principal purpose is to provide support for construction, acquisition, renovation, modification, repair, or rental of facilities, land, works, or fixed equipment for use in scientific or engineering R&D. A facility is to be interpreted broadly to include any physical resource important to the conduct of research or development. All costs—direct, indirect, and related expenditures—are to be included.

If the R&D facilities are part of a larger facility devoted to other purposes as well, the funds should be distributed among the categories of support involved as appropriate. In general, another category that would be involved is category 3 (facilities and equipment for S&E instruction).

Exclude from the R&D plant category expendable research equipment and office furniture and equipment, and all other activities, i.e., those not specifically related to S&E. See the definition of “research equipment” under category 1 (R&D).

3. Facilities and equipment for instruction in S&E include all programs whose principal purpose is to provide support for construction, acquisition, renovation, modification, repair, or rental of facilities, land, works, or equipment for use in instruction in S&E.

If the instructional facilities are part of a larger facility devoted to other purposes as well, the funds should be distributed among the categories of support involved as appropriate. In general, the other category most likely to be involved is category 2 (R&D plant).

4. Fellowships, traineeships, and training grants include all fellowship, traineeship, and training grant programs that are directed primarily toward the development and maintenance of the scientific and technical workforce. The total amounts pertaining to such awards (stipends and cost-of-education allowances) are reported in terms of the institution at which the recipient performs research and/or study.

Excluded are projects that support research and educational institutes, seminars, and conferences such as teacher training activities provided through teacher institutes, short courses, research participation, and in-service seminars; activities aimed at the development of educational techniques and materials for use in S&E training; and programs that provide special opportunities for increasing the scientific knowledge and experience of precollege and undergraduate students. These activities are to be reported either under category 6 (other activities related to S&E) or not reported if they are not S&E related.

5. General support for S&E includes activities that provide support for nonspecific or generalized purposes related to scientific research and education. Such projects are generally oriented toward academic departments, institutes, or institutions as a whole. "General support" implies a spectrum of varying types of support. At one extreme is support provided without any specification of purpose other than that funds be used for scientific activities. Another kind of general support is to be found in projects that provide funds for activity within a specified field of S&E but without specifying an explicit purpose. The distinguishing feature of general support for S&E projects is that they permit a significant measure of freedom as to purpose (research, faculty support, education, institutional support, etc.).

It is intended that among the projects to be reported under the category "general support for S&E" are projects awarded through these agency programs:

- NIH Minority Biomedical Research Support for Undergraduate Colleges
- NIH Minority Biomedical Support Grants

6. Other S&E activities include all academic S&E activities that cannot be meaningfully assigned to one of the five categories previously set forth. Among the types of activities to be included in this category are support for scientific conferences and symposia, teacher institutes, and activities aimed at increasing the scientific knowledge of precollege and undergraduate students.

TYPES OF INSTITUTIONS

The types of institutions covered by this survey are universities and colleges, independent nonprofit institutions, and consortia of both universities and colleges and of independent nonprofit institutions.

UNIVERSITIES AND COLLEGES

Universities and colleges are those institutions of higher education in the United States that offer at least 1 year of college-level study leading toward a degree. The universe of academic institutions for this survey is derived from the higher education institution portion of ED's Integrated Postsecondary Education Data System (sponsored by the National Center for Education Statistics) and the 2004 Higher Education Directory (published by Higher Education Publications, Inc.).

Institutions included are those that received federal S&E support during FY 2003. This support may have been provided to any part of the academic institution—its colleges (e.g., liberal arts) and schools (e.g., agriculture), professional schools, hospitals, agricultural experiment stations, bureaus, offices, and research centers (excluding FFRDCs), whether located on or off the main campus or at branch campuses controlled directly by the parent institution. Further, the institutions included must have a significant degree of academic and administrative autonomy. For example, institutions within a system (a group of institutions having a collective legal status and generally recognized by a state government, a board of education, or other relevant organization) in which a significant degree of autonomy remains at the individual institution level are presented separately; however, obligations to branch campuses are included in the totals for the parent institutions. Obligations to the U.S. Department of Agriculture Graduate School are not included.

INDEPENDENT NONPROFIT INSTITUTIONS

Independent nonprofit institutions are legal entities other than universities and colleges, privately organized

or chartered to serve the public interest, and exempt from most forms of federal taxation. Data presented for nonprofit institutions are obligations for R&D and R&D plant reported by as many as 18 participating agencies.

Coverage of the nonprofit sector in the federal S&E support survey was expanded beginning in the late 1970s to include all types of nonprofit institutions that receive federal R&D funds. For NSF's purposes, these types of institutions are defined as follows:

1. **Research institute:** A separately incorporated, independent nonprofit organization operating under the direction of its own controlling body whose primary function is the performance of R&D in S&E.
2. **Voluntary hospital:** A member of the American Hospital Association not subject to the control of either federal, state, or local governments nor an integral part of any institution of higher education. Note that hospitals that have been set up by research institutes and that, although providing patient care, function primarily as laboratories for research institutes are themselves classified as research institutes.
3. **All other independent nonprofit institutions:**

Professional or technical society or academy of science and engineering: A voluntary association of individuals sharing a common interest in the advancement of knowledge—either within a single field or across a broad spectrum of disciplines—whose major function is to aid and encourage the collection, collation, and dissemination of S&E knowledge for the benefit of its members and the community as a whole.

Private foundation: A nongovernmental nonprofit organization, with a principal fund of its own managed by its own trustees or directors, established to maintain, aid, or facilitate social, educational, charitable, religious, or other activities serving the common welfare. Private foundations include operating foundations that allocate the greater proportion of their R&D budgets to intramural performance and philanthropic foundations that allocate most of their funds to grants and contracts for research to be performed extramurally.

Science exhibitor: A nonprofit organization whose primary goal is to expand scientific literacy within a community by providing exhibits that display and

interpret the latest scientific findings within its field or fields. Included in this category are museums, zoos, botanical gardens, and arboretums.

Trade association: An organization of business competitors in a specific industry or business that is interested primarily in the commercial promotion of products or services. Membership is usually held in the name of a business entity. Activities may fall into one or more of the following areas: business ethics, management practices, standardization, commercial (statistical) research, publication, promotion, and public relations.

Agricultural cooperative: An organization of individuals or business entities that are normally competitors in the production and sale of agricultural products. Activities may fall into one or more of the following areas: collective marketing or purchasing, research, public relations, and improvement of economic conditions for the U.S. farm population.

Consortia: Consortia are organizations formed by the membership of a number of institutions from one or more types of performers (e.g., academic, nonprofit, industrial) in order to promote and support efforts to enhance knowledge in one or more science or engineering disciplines. NSF has identified several consortia and classified them as either academic or nonprofit types based on the predominance of their membership at the time of identification.

DATA COMPARABILITY WITH OTHER DIVISION OF SCIENCE RESOURCES STATISTICS REPORTS

FEDERAL FUNDS FOR RESEARCH AND DEVELOPMENT

Data presented here on R&D and R&D plant by agency sometimes differ significantly from similar data presented in the annual NSF Survey of Federal Funds for Research and Development (or the “federal funds survey”). Much of the difference lies in the two surveys’ treatment of interagency transfers. Interagency transfers of funds obligated to an academic or nonprofit institution are reported here by the agency that actually obligates the funds to the receiving institution. In the federal funds survey, however, obligations are reported by the agency in which the funds originated.

Other differences between the data compiled by the two surveys stem from the following factors:

Agencies involved: In the present survey, data are reported by as many as 18 federal agencies on their S&E obligations to institutions of higher education; these agencies together obligate virtually all federal support to academic R&D. For the federal funds survey, budget data on R&D and R&D plant are gathered from the 30 federal agencies with such programs.

Scope of information: Data collected in the federal S&E support survey pertain only to individual academic and nonprofit institutions. Those collected in the federal funds survey relate to all types of performers. Furthermore, the federal funds survey provides detailed data on the character of work (basic research, applied research, and development); data from the federal S&E support survey are not comparably disaggregated.

Data sources: The two surveys rely on different sources of data and different methods of data collection. For example, data for the federal S&E support survey are generally processed from award files; federal funds survey data are usually derived from agency budget documents.

Preparer interpretations: Several agencies rely on personnel from separate internal offices to respond to the two surveys. These respondents may differ in their interpretation of survey questions. NIH, for example, reports Minority Biomedical Support Grants under “general support for science and engineering” in the federal S&E support survey, but under “research and development” in the federal funds survey.

NATIONAL PATTERNS OF R&D RESOURCES

NSF publishes one other report related to federal R&D funding, *National Patterns of R&D Resources*. This report provides statistics on U.S. R&D expenditures categorized by provider of funds (federal government, nonfederal government, industry, academia, and nonprofit institutions), type of performer (federal government, industry, academia, nonprofit institutions, and FFRDCs), and character of work (basic research, applied research, and development). In the report, R&D expenditure levels from federal sources are based on performer-reported surveys, which differ from federal R&D funding totals reported by the federal agencies that provide those funds. During the past several years, these differences have

widened. The difference in the federal R&D totals appears to be concentrated in the funding of industry R&D by DOD. See *National Patterns of R&D Resources: 2003* (NSF 05-308) for a detailed discussion and documentation of these differences.

DATA AVAILABILITY

Data published in this report are also available on the World Wide Web. Information on file formats and the years for which they are available can be found at <http://www.nsf.gov/statistics/fedsupport/>.

INSTITUTIONAL PROFILES

Selected data items for individual doctorate-granting institutions and schools with S&E departments that grant a master’s degree are available on institutional profiles at <http://www.nsf.gov/statistics/profiles>. An institutional profile consists of data not only from this survey but from NSF’s other two academic S&E surveys: the Survey of Research and Development Expenditures at Universities and Colleges (academic R&D expenditures survey) and NSF-NIH Survey of Graduate Students and Postdoctorates in Science and Engineering (graduate student survey).

WebCASPAR

Institutional researchers can obtain data from several academic S&E resources through the web-based Integrated Science and Engineering Resources Data System (WebCASPAR), which provides access to a wide range of statistical data focusing on U.S. universities and colleges and their S&E resources.

WebCASPAR provides an extensive and growing data library with multiyear statistics on the state of higher education in general and on academic S&E resources specifically. This data library is based on a set of standard institutional and field-of-science definitions across the multiple sources used to develop the database. The WebCASPAR program includes built-in help capabilities to facilitate the use and interpretation of the data.

WebCASPAR data are drawn from a number of sources. All data are available for individual institutions, by state, and at the national level. Longitudinal data from surveys of universities and colleges conducted by NSF’s Division of Science Resources Statistics include the federal S&E support survey, academic R&D expenditures survey, federal funds survey, and graduate student survey cited above. Data from the Integrated Postsecondary Education Data System conducted by the National Center for Education Statistics also are included. Data from

other sources include the National Research Council's assessment of research doctorate programs.

WebCASPAR can be accessed via the World Wide Web at <http://caspar.nsf.gov/webcaspar>.

To obtain accurate historical data, use only the latest detailed statistical tables (covering FY 2003) and not data

published earlier. Data presented in trend tables are assembled from the most recently completed survey cycle. Data for prior years are reviewed for consistency with current year responses and, when necessary, are revised in consultation with agencies and/or institutions. For that reason, references to prior years' data should be restricted to those published in this document.

DETAILED STATISTICAL TABLES: FEDERAL S&E OBLIGATIONS TO UNIVERSITIES AND COLLEGES

Table *Page*

TRENDS

1. Federal obligations for science and engineering to universities and colleges, by type of activity: FY 1963–2003	12
2. Federal obligations for science and engineering to universities and colleges, by type of activity and agency: FY 1963–2003	13
3. Federal obligations for science and engineering to universities and colleges, by geographic division, state, and outlying area: FY 1996–2003	22
4. Federal obligations for science and engineering to the 100 universities and colleges receiving the largest amounts, ranked by the total amount received in FY 2003: FY 1996–2003	24
5. Federal obligations for science and engineering research and development to universities and colleges, by geographic division, state, and outlying area: FY 1996–2003	27
6. Federal obligations for science and engineering research and development to the 100 universities and colleges receiving the largest amounts, ranked by the total amount received in FY 2003: FY 1996–2003	29

8. Federal obligations for science and engineering to universities and colleges and number of recipient institutions, by location and type of activity: FY 2003	34
9. Federal obligations for science and engineering to universities and colleges, by geographic division, state, outlying area, and agency: FY 2003	38
10. Federal obligations for fellowships, traineeships, and training grants to universities and colleges, by geographic division, state, outlying area, and agency: FY 2003	40

100 INSTITUTIONS RANKED IN ORDER OF AMOUNT RECEIVED

11. Federal obligations for science and engineering to the 100 universities and colleges receiving the largest amounts, ranked by total amount received, by type of activity: FY 2003	42
12. Federal obligations for science and engineering to the 100 universities and colleges receiving the largest amounts, ranked by total amount received, by agency: FY 2003	45
13. Federal obligations for science and engineering research and development to the 100 universities and colleges receiving the largest amounts, ranked by total amount received, by agency: FY 2003	49
14. Federal obligations for fellowships, traineeships, and training grants to the 100 universities and colleges receiving the largest amounts, ranked by total amount received, by agency: FY 2003	53

INSTITUTIONAL LISTINGS, BY STATE

15. Federal obligations for science and engineering to universities and colleges, by location, institution, and type of activity: FY 2003	57
16. Federal obligations for science and engineering to universities and colleges, by location, institution, and agency: FY 2003	83
17a. Federal obligations for science and engineering research and development to universities and colleges, by location, institution, and agency: (AID–DOL) FY 2003	116
17b. Federal obligations for science and engineering research and development to universities and colleges, by location, institution, and agency: (DOT–USDA) FY 2003	144
18. Federal obligations for R&D plant to universities and colleges, by location, institution, and agency: FY 2003	169

HISTORICALLY BLACK COLLEGES AND UNIVERSITIES

19. Federal obligations for science and engineering to historically black colleges and universities, ranked by total amount received in FY 2003: FY 1996–2003	177
20. Federal obligations for science and engineering to historically black colleges and universities, ranked by total amount received, by type of activity: FY 2003	180
21. Federal obligations for science and engineering to historically black colleges and universities, ranked by total amount received, by agency: FY 2003	182
22. Federal obligations for science and engineering research and development to historically black colleges and universities, ranked by total amount received in FY 2003: FY 1996–2003	185

<i>Table</i>	<i>Page</i>
23. Federal obligations for science and engineering research and development to historically black colleges and universities, ranked by total amount received, by agency: FY 2003	187

SYSTEMS OF UNIVERSITIES AND COLLEGES

24. Federal obligations for science and engineering to systems of universities and colleges, ranked by total amount received, by agency: FY 2003	190
25. Federal obligations for science and engineering research and development to systems of universities and colleges, ranked by total amount received, by agency: FY 2003	193

FEDERAL S&E OBLIGATIONS TO NONPROFIT INSTITUTIONS

26. Federal obligations for science and engineering research and development and R&D plant to the 100 nonprofit institutions receiving the largest amounts, ranked by total amount received in FY 2003: FY 1996–2003	195
27. Federal obligations for science and engineering research and development and R&D plant to independent nonprofit institutions, by geographic division, state, outlying area, institution, and agency: FY 2003	198
28. Federal obligations for science and engineering research and development and R&D plant to research institutes, ranked by total amount received, by agency: FY 2003	258
29. Federal obligations for science and engineering research and development and R&D plant to voluntary hospitals, ranked by total amount received, by agency: FY 2003	267
30. Federal obligations for science and engineering research and development and R&D plant to other independent nonprofit institutions, ranked by total amount received, by agency: FY 2003	271

FEDERAL S&E OBLIGATIONS TO SELECTED CONSORTIA

31. Federal obligations for science and engineering to consortia of institutions: FY 1996–2003	316
32. Federal obligations for science and engineering to consortia of institutions, by type of activity: FY 2003	317
33. Federal obligations for science and engineering to consortia of institutions, by agency: FY 2003	318

TABLE 1. Federal obligations for science and engineering to universities and colleges, by type of activity: FY 1963–2003
(Dollars in thousands)

* = amount greater than 0 but less than \$50,000; NA = not available; AID = Agency for International Development; ARC = Appalachian Regional Commission; DOC = Department of Commerce; DOD = Department of Defense; DOE = Department of Energy; DOI = Department of Interior; DOL = Department of Labor; DOT = Department of Transportation; ED = Department of Education; EPA = Environmental Protection Agency; GSA = General Services Administration; HHS = Department of Health and Human Services; HUD = Department of Housing and Urban Development; NASA = National Aeronautics and Space Administration; NRC = Nuclear Regulatory Commission; NSF = National Science Foundation; OEO = Office of Economic Opportunity; OJP = Office of Justice Programs; SSA = Social Security Administration; USDA = Department of Agriculture.

S&E = science and engineering.

^a See Technical Notes, "Changes in Reporting".

^b Data shown for FY 1963–74 and 1975–77 represent obligations of Atomic Energy Commission and Energy Research Development Commission, respectively.

^c Data shown for FY 1963–79 represent obligations of the Department of Health, Education, and Welfare.

^d Beginning with FY 1990, the Department of Defense (DOD) research is reported separately from DOD development. DOD states that more than 90 percent of its development obligations reported for universities and colleges are performed at university-administered laboratories that are separate from the academic departments. Furthermore, DOD states that much of its development obligations are for major systems development, that such obligations differ from its obligations for advanced technology development, and that DOD total development obligations are therefore not comparable with development obligations at other federal agencies. Refer to table 17a for DOD obligations to individual institutions, by research and development breakdown.

^e Data collected before this year are not separately identified but are included under "Other S&E activities".

NOTES: Some trend shifts are related to institutional reclassification. Beginning in FY 1978, two laboratories that were formerly considered academically administered federally funded research and development centers became part of their respective institutions: Applied Physics Laboratory (Johns Hopkins University) and Applied Research Laboratory (Pennsylvania State University). Data for these laboratories are included in the academic figures beginning in FY 1978. Similarly, Draper Laboratories separated from the MA Institute of Technology as of FY 1974 to become an independent nonprofit institution; data for this laboratory are included in MIT's figures prior to FY 1974. Because of rounding, detail may not add to totals. Totals in this table do not include the Department of Homeland Security.

DOD = Department of Defense.

na = not applicable.

^a Department of Defense (DOD) research is reported separately from DOD development. DOD states that more than 90 percent of its development obligations reported for universities and colleges are performed at university-administered laboratories that are separate from the academic departments. Furthermore, DOD states that much of its development obligations are for major systems development, that such obligations differ from its obligations for advanced technology development, and that DOD total development obligations are therefore not comparable with development obligations at other federal agencies. Refer to table 17a for DOD obligations to individual institutions, by research and development breakdown.

^b See Technical Notes, "Changes in Reporting".

NOTE: Totals in this table do not include the Department of Homeland Security.

DOC = Department of Commerce; DOD = Department of Defense; DOE = Department of Energy; ED = Department of Education; EPA = Environmental Protection Agency; HHS = Department of Health and Human Services; NASA = National Aeronautics and Space Administration; NSF = National Science Foundation; USDA = Department of Agriculture.

^a Department of Defense (DOD) research is reported separately from DOD development. DOD states that more than 90 percent of its development obligations reported for universities and colleges are performed at university-administered laboratories that are separate from the academic departments. Furthermore, DOD states that much of its development obligations are for major systems development, that such obligations differ from its obligations for advanced technology development, and that DOD total development obligations are therefore not comparable with development obligations at other federal agencies. Refer to table 17a for DOD obligations to individual institutions, by research and development breakdown.

^b See General Notes.

NOTE: Totals in this table do not include the Department of Homeland Security.

AID = Agency for International Development; ARC = Appalachian Regional Commission; DOC = Department of Commerce; DOD = Department of Defense; DOE = Department of Energy; DOI = Department of Interior; DOL = Department of Labor.

^a Department of Defense (DOD) research is reported separately from DOD development. DOD states that more than 90 percent of its development obligations reported for universities and colleges are performed at university-administered laboratories that are separate from the academic departments. Furthermore, DOD states that much of its development obligations are for major systems development, that such obligations differ from its obligations for advanced technology development, and that DOD total development obligations are therefore not comparable with development obligations at other federal agencies.

NOTE: Totals in this table do not include the Department of Homeland Security.

SOURCE: National Science Foundation/Division of Science Resources Statistics, Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions, FY 2003.

DOC = Department of Commerce; DOD = Department of Defense; DOE = Department of Energy; ED = Department of Education; EPA = Environmental Protection Agency; HHS = Department of Health and Human Services; NASA = National Aeronautics and Space Administration; NSF = National Science Foundation; USDA = Department of Agriculture.

^a Beginning with FY 1990, the Department of Defense (DOD) research is reported separately from DOD development. DOD states that more than 90 percent of its development obligations reported for universities and colleges are performed at university-administered laboratories that are separate from the academic departments. Furthermore, DOD states that much of its development obligations are for major systems development, that such obligations differ from its obligations for advanced technology development, and that DOD total development obligations are therefore not comparable with development obligations at other federal agencies. Refer to table 17a for DOD obligations to individual institutions, by research and development breakdown.

^b See General Notes.

NOTES: Tied institutions are listed alphabetically. Totals in this table do not include the Department of Homeland Security.

DOC = Department of Commerce; DOD = Department of Defense; DOE = Department of Energy; ED = Department of Education; EPA = Environmental Protection Agency; HHS = Department of Health and Human Services; NASA = National Aeronautics and Space Administration; NSF = National Science Foundation; USDA = Department of Agriculture.

^a Department of Defense (DOD) research is reported separately from DOD development. DOD states that more than 90 percent of its development obligations reported for universities and colleges are performed at university-administered laboratories that are separate from the academic departments. Furthermore, DOD states that much of its development obligations are for major systems development, that such obligations differ from its obligations for advanced technology development, and that DOD total development obligations are therefore not comparable with development obligations at other federal agencies. Refer to table 17a for DOD obligations to individual institutions, by research and development breakdown.

^b See General Notes.

NOTES: Includes obligations to every individual institution included within each system. Totals in this table do not include the Department of Homeland Security.

SOURCE: National Science Foundation/Division of Science Resources Statistics, Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions, FY 2003.
