ABSTRACT

Survey of Income and Program Participation (SIPP) 2001 Panel, Wave 7 Topical Module Microdata File [machine-readable data file] / conducted by the U.S. Bureau of the Census. -Washington: The Bureau [producer and distributor], 2005.

Type of File:

Microdata; unit of observation is an individual.

Universe Description:

The universe is the resident population of the United States, excluding persons living in institutions and military barracks.

Subject-Matter Description:

The file contains data primarily from the topical module portion of the questionnaire. However, for purposes of matching persons to the core file, which was released separately, the beginning of the file contains identifying information as well as some basic demographic and social characteristics that are also contained in the core file. The identifying information includes sample unit, household address, and entry address identification. Demographic and social characteristics include age, sex, race (White; Black; American Indian, Eskimo, and Aleut; Asian or Pacific Islander), ethnic origin (34 categories including 9 Spanish origin categories), marital status, and education. Data in this topical module file include annual income & retirement account, taxes, retirement & pension plan coverage, home health care, and children's well-being.

The sample consists of 4 rotation groups, each interviewed in a different month from February 2003 to May 2003. For each group the reference period for reporting labor force activity and income is the four calendar months preceding the interview month.

SIPP is a longitudinal survey where each sampled household and each descendent household is reinterviewed at 4-month intervals for 9 interviews or "waves." This file contains the results of the **seventh** interview. Unique codes are included on each record to allow linking together the same persons from the preceding and subsequent waves.

Geographic Coverage:

United States. Codes are included for 45 individual States and the District of Columbia, **although the sample was not designed to produce State estimates**. Areas in the SIPP sample in five States are identified in two groups for confidentiality reasons. The file identifies a subsample of metropolitan residents, along with codes for selected metropolitan statistical areas (MSA's) and consolidated metropolitan statistical areas (CMSA's).

Technical Description:

File Structure: Rectangular. Each logical record for a sampled person includes information on the household and family of which the person was a part during each month of the reference period, as well as characteristics of the person.

File Size: 68,694 logical records; 1752 character logical record length.

File Sort Sequence of Sample Units: Sampling unit identification number by entry address ID and person number within sampling unit.

Reference Materials:

Survey of Income and Program Participation (SIPP) 2001 Panel, Wave 7 Topical Module Microdata File Technical Documentation. The documentation includes this abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on SIPP.

Survey of Income and Program Participation Users' Guide. *The Users' Guide* contains a general overview of the file as well as chapters on survey design and content, structure and use of cross-sectional files, linking waves and reliability of the data. It is available at <http://www.sipp.census.gov/sipp/pubs.html>

Related Reports Online and in Print:

Related reports include working papers, compilations of papers presented at annual meetings of the American Statistical Association, articles appearing in the *Journal of Economic and Social Measurement*, and reports in the P-70 series of the Current Population Reports. These reports are available online in PDF in the Publications Library at <http://www.census.gov/prod/www/titles.html> and in some cases in printed form from the Customer Services Center. Forthcoming reports will be cited in the *Census Product Update*, an online newsletter issued every two weeks. To subscribe or to view past issues, go to <http://www.census.gov/mp/www/cpu.html>

Related Machine-Readable Data Files:

SIPP files from all Waves of the 1984 through 1993 Panels, 1996 Panel, and 2001 Panel are available from the Customer Services Center. Files (1990 forward) may be downloaded from the Federal Electronic Research and Review Extraction Tool (FERRET) at <http://www.ferret.bls.census.gov/cgi-bin/ferret>

File Availability:

You can order the file on disc from the Customer Services Center at (301) 763-INFO (4636) or through our online sales catalog (click "Catalog" on the Census Bureau's home page). This file also may be downloaded from the Federal Electronic Research and Review Extraction Tool (FERRET) at <http://www.ferret.bls.census.gov/cgi-bin/ferret>

FILE INFORMATION

Matching Topical Module File with Core File

Since the core and topical module data are released as separate files, it may be necessary to match the two files. The two files contain the following information for linking purposes.

SSUID	Scrambled sample unit identifier
SPANEL	Panel year
SWAVE	Wave of data collection
SROTATION	Rotation of data collection
TFIPSST - FIPS	State code for the fifth month
EOUTCOME	Interview status code for the fifth month
SHHADID	Household address ID in the fourth reference month
SINTHHID	Household address ID of person in interview month
RFID	Family ID number in month four
RFID2	Family ID excluding related subfamily members
EPPIDX	Person index
EENTAID	Address ID of household where person entered sample
EPPNUM	Person number
EPOPSTAT	Population status based on age in fourth reference month
EPPINTVW	Person's interview status at time of interview
EPPMIS4	Person's fourth month interview status
ESEX	Sex of this person
ERACE	Race of this person
EORIGIN	Origin of this person
EFINWGT	Person weight
ERRP	Household relationship
EMS	Marital status
EPNMON	Person number of mother
EPNDAD	Person number of father
EPNGUARD	Person number of guardian
EPNSPOUS	Person number of spouse
RDESGPNT	Designated parent or guardian flag
TAGE	Age as of last birthday at the end of the fourth month
EEDUCATE	Highest degree received or grade completed

Geographic Coverage

State codes are shown except for five States which are identified in two groups. A subsample of metropolitan residents is identified along with codes for selected metropolitan statistical areas (MSA's) and consolidated metropolitan statistical areas (CMSA's). **The sample was not designed to produce State or MSA/CMSA level estimates.** State codes are primarily useful in relating a respondent's reciprocity of benefits to thresholds which may vary from State to State. MSA/CMSA codes may be used in relating respondent characteristics with contextual variables.

Identification Number System

The SIPP identification scheme is designed to uniquely identify individuals in each wave, provide a means of linking the same individuals over time, and group individuals into households and families over time.

The various components of the identification scheme are listed below:

SSUID	Sample Unit Identification Number
SINTHHID	Address ID
EENTAID	Entry Address ID
EPPPNUM	Person Number

The sample unit identification number was created by scrambling together the PSU, segment, and serial numbers used for Census Bureau administrative purposes. This identifier is constructed the same way on each wave regardless of moves, to enable matching from wave to wave.

The two-digit address ID code identifies each household associated with the same sample unit identification number. The first digit of the address ID code indicates the wave in which that address was first assigned for interview. The second digit sequentially numbers multiple households that have the same serial number. The address ID code is 11 for all sample addresses that are the same as in Wave 1. As SIPP sample persons move to new addresses, new address ID codes are assigned. Any new address to which sample unit members moved during Wave 4 is numbered in the 40's.

The person ID is a five-digit number consisting of the two-digit entry address ID and a three-digit person number. Person numbers 101, 102, etc., are assigned in Wave 1; 201, 202, etc., are assigned to persons added to the roster in Wave 2, and so forth. This five-digit number is not changed or updated, regardless of moves.

The sampling unit serial number and address ID code uniquely identifies each household in any given wave. The sampling unit serial number can link all households in subsequent waves back to the original Wave 1 household.

Topcoding of Income Variables

To protect against the possibility that a user might recognize the identity of a SIPP respondent with very high income, income from every source is "topcoded" so that no individual income amounts above \$150,000 are revealed. While the data dictionary indicates a topcode of 50,000 for monthly income, this topcode will rarely be used. In most cases the monthly income is shown as an individual dollar amount of \$12,500, with \$12,500 actually representing "\$12,500 or more." (the \$150,000 annual income topcode is \$12,500 multiplied by 12 months). Individual monthly amounts above \$12,500 may occasionally be shown if the respondent's income varied considerably from month to month, as long as the average does not exceed \$12,500. For example, if a respondent's income from a single job were concentrated in only one of the four reference months, a figure as high as \$50,000 could be shown. (Income from interest or property have lower topcodes).

Summary income figures on the person, family, and household records are simple sums of the components shown on the file after topcoding, and are not independently topcoded. Thus, a person with high income from several sources (jobs, businesses, property) could have aggregate monthly income well over the topcode for each source. Families and households with a number of high income members could theoretically have aggregate income shown well over \$150,000, though well below the \$1.5 million shown as the highest allowable value in the data dictionary.

The user is cautioned against trying to make much use of the occasional monthly figures above \$12,500, except in calculating aggregates or observing patterns across the 4-month period for a single individual, family, or household. Those units with higher monthly amounts shown are a biased sample of high income units, more likely to include units with income from multiple sources than other units with equally high aggregate income which comes from a single source.

INDEX TO 2001 WAVE 7 TOPICAL MODULE FILES

Key to Concept Labels

AIR - Annual Income and Retirement Account
 CW - Children's Well-Being
 FA - Family Variables
 HH - Household Variables
 IC - Informal Caregiving
 PE - Person, Demographic, and Coverage Variables
 PR - Pension Plan & Retirement Coverage
 SU - Sample Unit Variables
 TAX - Taxes
 WW - Weighting Variables

HOW TO USE THE DATA DICTIONARY

The Data Dictionary describes the file contents and provides locations for each variable (record layout of the public-use computer tape file.) The first line ("D" Line) of each data item description gives the variable name, size of the data field, and the begin position of that field. The components include a short mnemonic or field name for use with software packages; field size; starting position; and a description of field contents with possible values.

The next few lines contain descriptive text and any applicable notes. Categorical value codes and labels are given where needed. Comment notes marked by an (*) are provided throughout for the rest of the dictionary components. Comments should be removed from the machine-readable version of the data dictionary before using it to help access the data file.

The first line of each data item description begins with the character "D" (left-justified, two characters). The "D" flag indicates lines in the data dictionary containing the name, size and begin position of each data item. The second line of each data item description begins with the character "T" (left-justified, two characters). The "T" flag indicates lines in the data dictionary containing the category code and short description of the variable. The line beginning with the character "U" describes the universe for that item. Lines containing categorical value codes and labels follow next and begin with the character "V". The special character (.) denotes the start of the value labels. Two examples of data item descriptions follow:

```
D RNOTAKE      2      813
T LF: Reason couldn't start job
  Why couldn't ... have started a job?
U All persons 15+ at the end of the
  reference period who were unable to start
  a job during weeks on layoff or looking
  for work.
  EPOPSTAT = 1 and RTAKJOB = 2
V      -1 .Not in universe
V      1 .Waiting for a new job to begin
V      2 .Own temporary illness
V      3 .School
V      4 .Other
```

```
D RRRSN        2      1218
T GI: Reason for receipt of Railroad
  Retirement pay
  For what reason or reasons did ...
  receive Railroad Retirement pay during
  the reference period? ISS Code 2
U All persons 15 to 69 who receive
  disability income and/or persons 15+ at
  the end of the reference period who
  receive retirement income and/or survivor
  benefits.
V      -1 .Not in universe
V      1 .Disability
V      2 .Retirement
V      3 .Survivor
V      4 .Disability and retirement
V      5 .Disability and survivor
V      6 .Retirement and survivor
V      7 .Disability, retirement, and
  .survivor
V      8 .No payment received
```

D E1PENTYP 2 543
 T PR: Asks which type of pension plan
 PR12 PR200 The following question is
 about the plan you would consider to
 be your most important retirement plan
 on this job. There are several types of
 retirement plans. In the first
 type of plan, your benefit is defined by
 a formula usually involving your
 earnings and years on the job.
 In the second type of plan, contributions
 made by you and/or your employer go
 into an individual account for you.
 The third type of plan shares some
 characteristics with the above two
 plans. In this type of plan, your
 employer contributes a value equal to a
 percent of each of your earnings
 each year and there is a rate of
 return on that contribution. This type of
 plan is sometimes called a cash
 balance plan. What type of plan are
 you in? Universe=All respondents age 15
 and over who held a job or owned a business
 as of the last day of the reference period
 (RMNJBBSS>0), and whose employer/business
 offers pension or retirement plans, and who
 are included in a pension plan (EINCPENS =
 1), and who are covered by one or more than
 one plan (EMULTPEN > 1)

SOURCE AND ACCURACY STATEMENT

for the 2001 Public Use Files from the
Survey of Income and Program Participation¹

SOURCE OF DATA

The data were collected in the 2001 panel of the Survey of Income and Program Participation (SIPP). The population represented (the population universe) in the 2001 SIPP is the civilian noninstitutionalized population living in the United States. The institutionalized population, which is excluded from the population universe, is composed primarily of the population in correctional institutions and nursing homes (91 percent of the 4.1 million institutionalized people in Census 2000). The population includes persons living in group quarters, such as dormitories, rooming houses, and religious group dwellings. Crew members of merchant vessels, Armed Forces personnel living in military barracks, and institutionalized persons, such as correctional facility inmates and nursing home residents, were not eligible to be in the survey. Also, United States citizens residing abroad were not eligible to be in the survey. Foreign visitors who work or attend school in this country and their families were eligible; all others were not eligible to be in the survey. With the exceptions noted above, persons who were at least 15 years of age at the time of the interview were eligible to be in the survey.

The 2001 panel of the SIPP sample is located in 322 Primary Sampling Units (PSUs), each consisting of a county or a group of contiguous counties. Within these PSUs, living quarters (LQs) were systematically selected from lists of addresses prepared for the 1990 decennial census to form the bulk of the sample. To account for LQs built within each of the sample areas after the 1990 census, a sample containing clusters of four LQs was drawn of permits issued for construction of residential LQs up until shortly before the beginning of the panel.

In jurisdictions that do not issue building permits or have incomplete addresses, we systematically sampled expected clusters of four LQs which were listed by field personnel and then subsampled in the field. In addition, we selected sample LQs from a supplemental frame that included LQs identified as missed in the 1990 census.

Sample households within a given panel are divided into four random subsamples of nearly equal size. These subsamples are called rotation groups and one rotation group is interviewed each month. Each household in the sample was scheduled to be interviewed at 4 month intervals over a period of roughly 3 years beginning in February 2001. The reference period for the questions is the 4-month period preceding the interview month. In general, one cycle of four interviews covering the entire sample, using the same questionnaire, is called a wave.

In Wave 1, we fielded a sample consisting of 88 reduction groups (88 comparable representative subsamples) which resulted in an average sampling interval of approximately 2,420 housing units. In this wave, we obtained interviews from occupants of about 35,100 of the 40,500 eligible living quarters. We found most of the remaining 15,400 living quarters in the panel to be vacant, demolished, converted to

¹ For questions or further assistance with the information provided in this document contact Jennifer A. Guarino of the Demographic Statistical Methods Division on (301) 763-6445 or via the e-mail using jennifer.a.guarino@census.gov.

nonresidential use, or otherwise ineligible for the survey. However, we did not interview approximately 5,400 of the 15,400 living quarters in the panel because the occupants, (1) refused to be interviewed, (2) could not be found at home, (3) were temporarily absent, or (4) were otherwise unavailable. Thus, occupants of about 87 percent of all eligible living quarters participated in the first interview of the panel.

Due to budget constraint, we cut the sample in Wave 2 by 13 reduction groups which resulted in an average sampling interval of approximately 2,840 housing units. We did not cut the sample in the remaining waves (Wave 3 to Wave 9). For interviews in Wave 2 to Wave 9, only original sample persons (those in Wave 1 sample households which survived the sample cut in Wave 2 and interviewed in Wave 1) and persons living with them were eligible to be interviewed. We followed original sample persons if they moved to a new address, unless the new address was more than 100 miles from a SIPP sample area. Then, we attempted telephone interviews. Based on these follow-up criteria, we interviewed about 28,100 living quarters of the approximately 30,500 eligible living quarters for Wave 2, about 27,500 living quarters of the approximately 30,900 eligible living quarters for Wave 3, about 27,200 living quarters of the approximately 31,100 eligible living quarters for Wave 4, about 26,800 living quarters of the approximately 31,300 eligible living quarters for Wave 5, about 26,600 living quarters of the approximately 31,400 eligible living quarters for Wave 6, about 26,500 living quarters of the approximately 31,500 eligible living quarters for Wave 7, about 26,000 living quarters of the approximately 31,600 eligible living quarters for Wave 8, about 25,500 living quarters of the approximately 31,700 eligible living quarters for Wave 9. In each of these waves, we did not interview some of the eligible living quarters because the occupants either directly or indirectly refused our interview in the same manner described for Wave 1 or moved to an unknown address. The rates of non-interviewed living quarters due to direct or indirect refusal were 6.2% for Wave 2, 8.4% for Wave 3, 9.5% for Wave 4, 10.9% for Wave 5, 11.6% for Wave 6, 12.3% for Wave 7, 13.3% for Wave 8, and 14.7% for Wave 9. The rates of non-interviewed living quarters due to moving to an unknown address were 1.7% for Wave 2, 2.7% for Wave 3, 3.2% for Wave 4, 3.6% for Wave 5, 3.7% for Wave 6, 3.8% for Wave 7, 4.5% for Wave 8, and 4.8% for Wave 9.

The public use files include core and supplemental (topical module) data. Core questions are repeated at each interview over the life of the panel. Topical modules include questions which are asked only in certain waves. The 2001 panel topical modules are given in Table 1.

Table 2 indicates the reference months and interview months for the collection of data from each rotation group for the 2001 panel. For example, Wave 1 rotation group 1 of the 2001 panel was interviewed in February 2001 and data for the reference months October 2000 through January 2001 were collected. This source and accuracy statement can also be accessed through the U.S. Census Bureau website at “http://www.sipp.census.gov/sipp/sourceac/S&A01_w1tow9_cross_puf.pdf.”

Estimation. We used several stages of weight adjustments in the estimation procedure to derive the SIPP cross-sectional person level weights. We gave each person a base weight (**BW**) equal to the inverse of probability of selection of a person’s household. We applied two noninterview adjustment factors. One factor adjusted the weights of interviewed persons in interviewed households to account for households which were eligible for the sample but which field representatives could not interview at the first interview (F_{N1}). The second factor compensated for person noninterviews occurring in subsequent interviews (F_{N2}). We used a Duplication Control Factor (**DCF**) which adjusts for subsampling done in the field when the number of sample units is much larger than expected. We applied a Mover’s Weight

(**MW**), which adjusts for persons in the SIPP universe who move into sample households after Wave 1. The last factor applied is the Second Stage Adjustment Factor (F_{2s}). This factor adjusts estimates to population controls and causes husbands' and wives' weights to be equal. See the next section on population controls for more information on how they are obtained.

Population Controls. This survey's estimation procedure adjusts weighted sample results to agree with independently derived population estimates of the civilian noninstitutional population of the United States. We control to independent population estimates in an attempt to reduce our mean square error by partially correcting for undercoverage. To obtain the controls, we take the CPS weights and do a "March type" family equalization. That is, we assign wives' weights to husbands and then proportionally adjust the weights of persons by month, rotation group, race, sex, age, and by the marital and family status of householders. Using these weights with CPS data, the controls for SIPP are obtained. These are prepared annually to agree with the most current set of population estimates that are released as part of the Census Bureau's population estimates and projections program.

The population controls for the nation are distributed by demographic characteristics in two ways:

- age, sex, and race (Non Black, Black) and
- age, sex, and Hispanic origin.

The estimates begin with the latest decennial census as the base and incorporate the latest available information on births and deaths along with the latest estimates of net international migration.

The net international migration component in the population estimates includes a combination of:

- legal migration to the U.S.,
- emigration of foreign born and native people from the U.S.,
- net movement between the U.S. and Puerto Rico,
- estimates of temporary migration, and
- estimates of net residual foreign-born population, which include unauthorized migration.

Because the latest available information on these components lag the survey date, to develop the estimate for the survey date, it is necessary to make short-term projections of these components.

The final cross-sectional weight is $Fw_c = BW \times DCF \times F_{n1} \times F_{2s}$ for Wave 1 and is

$Fw_c = IW \times F_{n2} \times F_{2s}$ for Waves 2+, where IW is either $BW \times DCF \times F_{n1}$ or MW .

James (1995) and Siegel (1995a) describe SIPP cross-sectional weighting in greater detail.

Researchers both inside and outside the Census Bureau conducted evaluations of SIPP weighting methodology and researched alternative methodologies. Several improvements to SIPP weighting methods were implemented beginning with the 1996 panel. They are described below.

- We dropped the first stage factor (F_{1s}) from cross-sectional weighting. This factor adjusted for differences between the Census count of population and an estimate of that count based on Census data for sample PSUs. James (1994) found that it did not reduce variance as was previously believed. Jabine, et al (1990) describe the first stage factor used in earlier panels.
- We are using additional variables in nonresponse adjustment. We added high/low poverty stratum code to the Wave 1 nonresponse adjustment, and we added household income, geographic

division, and number of imputations for selected income and asset items to the nonresponse adjustment for Waves 2+. Research by Rizzo, et al (1994) and by Folsom and Witt (1994) pointed out the potential of the latter three variables in reducing nonresponse bias.

- We redefined nonresponse adjustment cells for Waves 2+ weighting. We formed the nonresponse cells by successively partitioning data from five panels by whichever variable most reduced the bias of the household income to poverty threshold ratio. We used data from a sixth panel to evaluate the results. We calculated the nonresponse bias of six variables at Waves 2 and 7 for both the new cells and the original cells using initial weights and data from the most recent interview in the calculations. The new cells had lower bias for five of the six variables (Siegel, 1995b).

Research was conducted on a number of promising weighting improvements. Allen and Petroni (1994) reported on an adjustment for mover attrition. Folsom and Witt (1994) and Rizzo, et al (1994) studied alternative nonresponse adjustments using response propensity models. Each study computed weights using an alternative methodology. The researchers then compared estimates of various items to benchmarks. The benchmarks came from administrative records and survey data with less nonresponse than the SIPP. The comparisons did not provide strong evidence of lower bias using the alternative weighting methods.

Additional Methodology

Use of Weights. Each household and each person within each household, on each core wave file has four weights. These four weights are reference month specific and therefore can be used only to form reference month estimates. Reference month estimates can be averaged to form estimates of monthly averages over some period of time.

Example, using the proper weights, one can estimate the monthly average number of households in a specified income range over November and December 2001. To estimate monthly averages of a given measure (such as, total, mean) over a number of consecutive months, sum the monthly estimates and divide by the number of months.

To form an estimate for a particular month, use the reference month weight for the month of interest, summing over all persons or households with the characteristic of interest whose reference period includes the month of interest. Multiply the sum by a factor to account for the number of rotations contributing data for the month. This factor equals four divided by the number of rotations contributing data for the month. For example, December 2000 data is only available from rotations 1, 2, and 3 for Wave 1 of the 2001 panel (See Table 2), so a factor of 4/3 must be applied.

When estimates for months with less than four rotations worth of data are constructed from a wave file, factors greater than 1 must be applied, as above. However, when core data from consecutive waves are used together, data from all four rotations may be available, in which case the factors are equal to 1.

These core wave files contain no weight for characteristics that involve a persons's or household's status over two or more months (such as, number of households with a 50 percent increase in income between December 2000 and January 2001).

Producing Estimates for Census Regions and States. The total estimate for a region is the sum of the state estimates in that region. Using this sample, estimates for individual states are subject to very high variance and may not be state representative due to the nature of the sample design. Therefore, estimates for individual states are not recommended. The state codes on the file are primarily of use in linking respondent characteristics with appropriate contextual variables (for example, state-specific welfare criteria) and for tabulating data by user-defined groupings of states.

ESTIMATES

SIPP estimates are based on a sample; they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaire, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: nonsampling and sampling. We are able to provide estimates of the magnitude of SIPP sampling error, but this is not true of nonsampling error. Found in the next sections are descriptions of sources of SIPP nonsampling error, followed by a discussion of sampling error, its estimation, and its effect in data analyses.

Nonsampling Error. Nonsampling errors can be attributed to many sources:

- inability to obtain information about all cases in the sample
- definitional difficulties
- differences in the interpretation of questions
- inability or unwillingness on the part of the respondents to provide correct information
- inability to recall information, errors made in the following: collection such as in recording or coding the data, processing the data, estimating values for missing data
- biases resulting from the differing recall periods caused by the interviewing pattern used
- and undercoverage.

Quality control and edit procedures were used to reduce errors made by respondents, coders and interviewers. More detailed discussions of the existence and control of nonsampling errors in the SIPP can be found in the *SIPP Quality Profile, 1998 SIPP Working Paper Number 230, issued May 1999*.

Undercoverage in SIPP results from missed living quarters and missed persons within sample households. It is known that undercoverage varies with age, race, and sex. Generally, undercoverage is larger for males than for females and larger for Blacks than for non-Blacks. Ratio estimation (second stage weight adjustment) to independent age-race-sex population controls partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that persons in missed households or missed persons in interviewed households have characteristics different from those of interviewed persons in the same age-race-sex group. Further, the independent population controls used have been adjusted for undercoverage in the Census.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. The Table below shows SIPP coverage ratios for age-sex-race groups for one month-February 2001 prior to the weighting adjustment. The SIPP coverage ratios exhibit some variability from month to month, but these are a typical set of coverage

ratios. Other Census Bureau household surveys (like the Current Population Survey) experience similar coverage.

Comparability with Other Estimates. Caution should be exercised when comparing data from this with data from other SIPP products or with data from other surveys. The comparability problems are caused by such sources as the seasonal patterns for many characteristics, different nonsampling errors, and different concepts and procedures. Refer to the *SIPP Quality Profile* for known differences with data from other sources and further discussions.

Sampling Variability. Standard errors indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The standard errors for the most part measure the variations that occurred by chance because a sample rather than the entire population was surveyed.

SIPP Coverage Ratios for February 2001

USES AND COMPUTATION OF STANDARD ERRORS

Confidence Intervals. The sample estimate and its standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Hypothesis Testing. Standard errors may also be used for hypothesis testing, a procedure for distinguishing between population characteristics using sample estimates. The most common types of hypotheses tested are 1) the population characteristics are identical versus 2) they are different. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

To perform the most common test, compute the difference $X_A - X_B$, where X_A and X_B are sample estimates of the characteristics of interest. A later section explains how to derive an estimate of the standard error of the difference $X_A - X_B$. Let that standard error be S_{DIFF} . If $X_A - X_B$ is between -1.6 times S_{DIFF} and $+1.6$ times S_{DIFF} , no conclusion about the characteristics is justified at the 10 percent significance level. If, on the other hand, $X_A - X_B$ is smaller than -1.6 times S_{DIFF} or larger than $+1.6$ times S_{DIFF} , the observed difference is significant at the 10 percent level. In this event, it is commonly accepted practice to say that the characteristics are different. Of course, sometimes this conclusion will be wrong. When the characteristics are the same, there is a 10 percent chance of concluding that they are different.

Note that as more tests are performed, more erroneous significant differences will occur. For example, at the 10 percent significance level, if 100 independent hypothesis tests are performed in which there are no real differences, it is likely that about 10 erroneous differences will occur. Therefore, the significance of any single test should be interpreted cautiously.

Note Concerning Small Estimates and Small Differences. Because of the large standard errors involved, there is little chance that estimates will reveal useful information when computed on a base smaller than 200,000. Care must be taken in the interpretation of small differences since even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Calculating Standard Errors for SIPP Estimates. There are three main ways we calculate the Standard Errors for SIPP Estimates. They are as follows:

- Replicate Weighting Methods,
- Generalized Variance parameters (denoted as a and b),
- Simplified tables using the a and b parameters.

SIPP uses the Replicate Weighting Method to produce Generalized Variance parameters. Using the Generalized Variance parameters, we create simplified tables.

Standard Error Parameters and Tables and Their Use. Most SIPP estimates have greater standard errors than those obtained through a simple random sample because PSUs are sampled and clusters of living quarters are sampled for the SIPP in the area and new construction frames. To derive standard errors that would be applicable to a wide variety of estimates and could be prepared at a moderate cost, a number of approximations were required. Estimates with similar standard error behavior were grouped together by characteristics at the person level and characteristics of households (including unrelated persons). Two parameters (denoted a and b) were computed for each characteristic in order to approximate the standard error behavior. These a and b parameters vary according to wave and characteristic as well as the demographic subgroup of the group to which the estimate applies. Because the actual standard error behavior was not identical for all characteristics and groups, the standard errors computed using these parameters provide an indication of the order of magnitude of the standard error estimate for a specific group. Table 3 provides tables of base a and b parameters by wave to be used for the 2001 panel estimates. There are four sets of parameters in Table 3: the first set of parameters per item is given to be used for calculations based on persons or households interviewed during Wave 1 the second set is for Waves 2 and 3, the third set is for Wave 4 to Wave 6, and the fourth set is for Wave 7 to Wave 9. Table 9 provides the base generalized variance a and b parameters for calculating 2001 topical module variances.

Table 2 lists the reference months for each interview month. Use Table 4 (if needed) to select the adjustment factor appropriate to the wave. Multiply this factor by the a and b base parameters of Table 3 to produce a and b parameters for the variance estimate for a specific subgroup and reference period. For example, the base a and b parameters for total number of households are -0.00003286 and 3546 , respectively. Using Table 4 for Wave 1, the factor for November 2000 is 2 *since only 2 rotation months of data are available*. So the a and b parameters for the variance estimate of a white household characteristic in November 2000 based on Wave 1 are $-0.00003286 \times 2 = -0.00006572$ and $3546 \times 2 = 7,092$, respectively.

Similarly, the factor for the last quarter of 2000 is 1.8519 (Table 4) since the only data available are the 6 rotation months from Wave 1 (namely, as indicated in Table 2, rotation 1 provides three rotation months, rotation 2 provides two rotation months, and rotation 3 provides one rotation month of data.) So the a and b parameters for the variance estimate of a white household characteristic in the last quarter of 2000 are $-0.00003286 \times 1.8519 = -0.00006085$ and $3546 \times 1.8519 = 6,567$, respectively.

The a and b parameters may be used to calculate the standard error for estimated numbers and percentages. Because the actual standard error behavior was not identical for all estimates within a group, the standard errors computed from these parameters provide an indication of the order of magnitude of the standard error for any specific estimate. Methods for using these parameters for computation of

approximate standard errors are given in the following sections.

For those users who wish further simplification, we have also provided base standard errors for estimates of total and estimates of percentages in Tables 5 through 8. Note that these base standard errors only apply when data from all four rotations are used and must be adjusted by an f factor provided in Table 3. The standard errors resulting from this simplified approach are less accurate. Methods for using these parameters and tables for computation of standard errors are given in the following sections.

The procedures described below apply only to reference month estimates or averages of reference month estimates. Refer to the section "Use of Weights" for a more detailed discussion of the construction of estimates.

Variance stratum codes and half sample codes are included on the tapes (data sets) to enable the user to compute the variances directly and more accurately by methods such as balanced repeated replications (BRR). William G. Cochran provides a list of references discussing the application of this technique. (See Sampling Techniques, 3rd Ed., New York: John Wiley and Sons, 1977, p. 321.)

Standard Errors of Estimated Numbers. The approximate standard error, s_x , of an estimated number of persons, households, families, unrelated individuals and so forth, can be obtained in two ways. Both apply when data from all four rotations are used to make the estimate. However, only the second method (formula 2) should be used when less than four rotations of data are available for the estimate. Note that neither method should be applied to dollar values.

The standard error may be obtained by the use of the formula

$$s_x = fs \tag{1}$$

where f is the appropriate f factor from Table 3, and s is the base standard error on the estimate obtained by interpolation from Table 5 or 6. Alternatively, s_x may be approximated by the formula

$$s_x = \sqrt{ax^2 + bx} \tag{2}$$

from which the base standard errors in Tables 7 and 8 were calculated. Here x is the size of the estimate and a and b are the parameters from Table 4 which are associated with the characteristic being estimated (and the wave which applies). Use of formula 2 will generally provide more accurate results than the use of formula 1.

Illustration.

Suppose SIPP estimates based on Wave 1 of the 2001 panel show that there were 1,700,000 black households with monthly household income above \$4,000 in January 2001. The appropriate parameters and factor from Table 3 and the appropriate general standard error from Table 5 are

$$a = -0.00019168 \quad b = 2,495 \quad f = 0.84 \quad s = 76,800$$

Using formula 1, the approximate standard error is

$$s_x = (0.84)(76,800) = 64,512$$

Using formula 2, the approximate standard error is

$$\sqrt{(-0.00019168)(1,700,000)^2 + (2,495)(1,700,000)} = 60,725$$

Using the standard error based on formula 2, the approximate 90-percent confidence interval as shown by the data is from 1,600,107 to 1,799,893. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90% of all samples.

Standard Error of a Mean. A mean is defined here to be the average quantity of some item (other than persons, families, or households) per person, family or household. For example, it could be the average monthly household income of females age 25 to 34. The standard error of a mean can be approximated by formula 3 below. Because of the approximations used in developing formula 3, an estimate of the standard error of the mean obtained from this formula will generally underestimate the true standard error. The formula used to estimate the standard error of a mean \bar{x} is

$$s_{\bar{x}} = \sqrt{\left(\frac{b}{y}\right) s^2} \tag{3}$$

where y is the size of the base, s^2 is the estimated population variance of the item and b is the parameter associated with the particular type of item.

The population variance s^2 may be estimated by one of two methods. In both methods, we assume x_i is the value of the item for unit "i." (Unit may be person, family, or household). To use the first method, the range of values for the item is divided into "c" intervals. The upper and lower boundaries of interval j are Z_{j-1} and Z_j , respectively. Each unit is placed into one of "c" groups such that $Z_{j-1} < x_i \leq Z_j$.

The estimated population variance, s^2 , is given by the formula:

$$s^2 = \sum_{j=1}^c p_j m_j^2 - \bar{x}^2, \tag{4}$$

where p_j is the estimated proportion of units in group j , and $m_j = (Z_{j-1} + Z_j) / 2$. The most representative value of the item in group j is assumed to be m_j . If group “c” is open-ended, or there is no upper interval boundary exists, then an approximate value for m_c is

$$m_c = \frac{3}{2} Z_{c-1}.$$

The mean, \bar{x} can be obtained using the following formula:

$$\bar{x} = \sum_{j=1}^c p_j m_j$$

In the second method, the estimated population mean, \bar{x} , and variance, s^2 are given by

$$\begin{aligned} \bar{x} &= \frac{\sum_{i=1}^n w_i x_i}{\sum_{i=1}^n w_i} \\ s^2 &= \frac{\sum_{i=1}^n w_i x_i^2}{\sum_{i=1}^n w_i} - \bar{x}^2, \end{aligned} \tag{5}$$

where there are n units with the item of interest and w_i is the final weight for unit “I”. (Note that $\sum w_i = y$ in formula 3.)

Illustration.

Suppose that based on Wave 1 data, the distribution of monthly cash income for persons age 25 to 34 during the month of January 2001 is given in Table 10.

Using formula 4 and the mean monthly cash income of \$2,530 the approximate population variance, s^2 , is

$$\begin{aligned} s^2 &= \left(\frac{1,371}{39,851} \right) (150)^2 + \left(\frac{1,651}{39,851} \right) (450)^2 + \dots + \\ &\quad \left(\frac{1,493}{39,851} \right) (9,000)^2 - (2,530)^2 = 3,159,887. \end{aligned}$$

Using formula 3 and the appropriate base b parameter from Table 3, the estimated standard error of a mean \bar{x} is

$$s_{\bar{x}} = \sqrt{\left(\frac{4,263}{39,851,000}\right) (3,159,887)} = \$18.39$$

Standard error of an aggregate. An aggregate is defined to be the total quantity of an item summed over all the units in a group. The standard error of an aggregate can be approximated using formula 6.

As with the estimate of the standard error of a mean, the estimate of the standard error of an aggregate will generally underestimate the true standard error. Let y be the size of the base, s^2 be the estimated population variance of the item obtained using formula (4) or (5) and b be the parameter associated with the particular type of item. The standard error of an aggregate is

$$s_x = \sqrt{(b) (y) s^2} \tag{6}$$

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more, e.g., the percent of people employed is more reliable than the estimated number of people employed. When the numerator and denominator of the percentage have different parameters, use the parameter (and appropriate factor) of the numerator. If proportions are presented instead of percentages, note that the standard error of a proportion is equal to the standard error of the corresponding percentage divided by 100.

There are two types of percentages commonly estimated. The first is the percentage of persons, families or households sharing a particular characteristic such as the percent of persons owning their own home. The second type is the percentage of money or some similar concept held by a particular group of persons or held in a particular form. Examples are the percent of total wealth held by persons with high income and the percent of total income received by persons on welfare.

For the percentage of persons, families, or households, the approximate standard error, $s_{(x,p)}$, of the estimated percentage p can be obtained by the formula

$$s_{(x,p)} = f s \tag{7}$$

when data from all four rotations are used to estimate p .

In this formula, f is the appropriate f factor from Table 3 (for the appropriate wave) and s is the base standard error of the estimate from Table 7 or 8.

Alternatively, it may be approximated by the formula

$$s_{(x,p)} = \sqrt{\frac{b}{x} (p) (100-p)} \quad (8)$$

from which the standard errors in Tables 7 and 8 were calculated. Here x is the size of the subclass of social units which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter associated with the characteristic in the numerator. Use of this formula will give more accurate results than use of formula 7 above and should be used when data from less than four rotations are used to estimate p .

Illustration.

Suppose that, in the month of January 2001, 6.7 percent of the 16,812,000 persons in nonfarm households with a mean monthly household cash income of \$4,000 to \$4,999, were black. Using formula 8 and the b parameter of 4,475 from Table 3 and a factor of 1 for the month of January 2001 from Table 4, the approximate standard error is

$$\sqrt{\frac{4,475}{(16,812,000)} (6.7) (100-6.7)} = 0.41 \text{ percent}$$

Consequently, the 90 percent confidence interval as shown by these data is from 6.03 to 7.37 percent.

For percentages of money, a more complicated formula is required. A percentage of money will usually be estimated in one of two ways. It may be the ratio of two aggregates:

$$p_I = 100 (X_A / X_N)$$

or it may be the ratio of two means with an adjustment for different bases:

$$p_I = 100 (\hat{p}_A \bar{X}_A / \bar{X}_N)$$

where x_A and x_N are aggregate money figures, \bar{x}_A and \bar{x}_N are mean money figures, and \hat{p}_A is the estimated number in group A divided by the estimated number in group N. In either case, we estimate the standard error as

$$s_I = \sqrt{\left(\frac{\hat{P}_A \bar{x}_A}{\bar{x}_N}\right)^2 \left[\left(\frac{s_p}{\hat{P}_A}\right)^2 + \left(\frac{s_A}{\bar{x}_A}\right)^2 + \left(\frac{s_B}{\bar{x}_N}\right)^2\right]}, \quad (9)$$

where s_p is the standard error of \hat{P}_A , s_A is the standard error of \bar{x}_A and s_B is the standard error of \bar{x}_N . To calculate s_p , use formula 8. The standard errors of \bar{x}_N and \bar{x}_A may be calculated using formula 3.

It should be noted that there is frequently some correlation between \hat{P}_A , \bar{x}_N , and \bar{x}_A . Depending on the magnitude and sign of the correlations, the standard error will be over or underestimated.

Illustration.

Suppose that in January 2001, 9.8% of the households own rental property, the mean value of rental property is \$72,121, the mean value of assets is \$78,734, and the corresponding standard errors are 0.19 %, \$5799, and \$2867, respectively. In total there are 86,790,000 households. Then, the percent of all household assets held in rental property is

$$= 100 \left((0.098) \frac{72121}{78734} \right) = 9.0\%$$

Using formula (9), the appropriate standard error is

$$s_I = \sqrt{\left(\frac{(0.098)(72121)}{78734}\right)^2 \left[\left(\frac{0.0019}{0.098}\right)^2 + \left(\frac{5799}{72121}\right)^2 + \left(\frac{2867}{78734}\right)^2\right]}$$

$$= 0.008 = 0.8\%$$

Standard Error of a Difference. The standard error of a difference between two sample estimates is approximately equal to

$$s_{(x-y)} = \sqrt{s_x^2 + s_y^2} \quad (10)$$

where s_x and s_y are the standard errors of the estimates x and y . The estimates can be numbers, percents, ratios, etc. The above formula assumes that the correlation coefficient between the

characteristics estimated by x and y is zero. If the correlation is really positive (negative), then this assumption will tend to cause overestimates (underestimates) of the true standard error.

Illustration.

Suppose that SIPP estimates show the number of persons age 35-44 years with monthly cash income of \$4,000 to \$4,999 was 3,186,000 in the month of January 2001 and the number of persons age 25-34 years with monthly cash income of \$4,000 to \$4,999 in the same time period was 2,619,000. Then, using parameters from Table 3 and formula 2, the standard errors of these numbers are approximately 115,689 and 105,029, respectively. The difference in sample estimates is 567,000 and using formula 10, the approximate standard error of the difference is

$$\sqrt{(115,689)^2 + (105,029)^2} = 156,253$$

Suppose that it is desired to test at the 10 percent significance level whether the number of persons with monthly cash income of \$4,000 to \$4,999 was different for persons age 35-44 years than for persons age 25-34 years. To perform the test, compare the difference of 567,000 to the product $1.645 \times 156,253 = 257,036$. Since the difference is greater than 1.645 times the standard error of the difference, the data show that the two age groups are significantly different at the 10 percent significance level.

Standard Error of a Median. The median quantity of some item such as income for a given group of persons, families, or households is that quantity such that at least half the group have as much or more and at least half the group have as much or less. The sampling variability of an estimated median depends upon the form of the distribution of the item as well as the size of the group. To calculate standard errors on medians, the procedure described below may be used.

An approximate method for measuring the reliability of an estimated median is to determine a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.) The following procedure may be used to estimate the 68-percent confidence limits and hence the standard error of a median based on sample data.

1. Determine, using either formula 7 or formula 8, the standard error of an estimate of 50 percent of the group.
2. Add to and subtract from 50 percent the standard error determined in step 1.
3. Using the distribution of the item within the group, calculate the quantity of the item such that the percent of the group with more of the item is equal to the smaller percentage found in step 2. This quantity will be the upper limit for the 68-percent confidence interval. In a similar fashion, calculate the quantity of the item such that the percent of the group with more of the item is equal to the larger percentage found in step 2. This quantity will be the lower limit for the 68-percent confidence interval.

4. Divide the difference between the two quantities determined in step 3 by two to obtain the standard error of the median.

To perform step 3, it will be necessary to interpolate. Different methods of interpolation may be used. The most common are simple linear interpolation and Pareto interpolation. The appropriateness of the method depends on the form of the distribution around the median. If density is declining in the area, then we recommend Pareto interpolation. If density is fairly constant in the area, then we recommend linear interpolation. Note, however, that Pareto interpolation can never be used if the interval contains zero or negative measures of the item of interest. Interpolation is used as follows. The quantity of the item such that p percent have more of the item is

$$X_{pN} = \exp\left[\left(\frac{\ln\left(\frac{pN}{N_1}\right)}{\ln\left(\frac{N_2}{N_1}\right)}\right) \ln\left(\frac{A_2}{A_1}\right)\right] A_1 \quad (11)$$

if Pareto Interpolation is indicated and

$$X_{pN} = \left[\frac{pN - N_1}{N_2 - N_1} (A_2 - A_1) + A_1 \right] \quad (12)$$

if linear interpolation is indicated, where

- N is the size of the group,
- A_1 and A_2 are the lower and upper bounds, respectively, of the interval in which X_{pN} falls
- N_1 and N_2 are the estimated number of group members owning more than A_1 and A_2 , respectively
- exp refers to the exponential function and
- Ln refers to the natural logarithm function

Illustration.

To illustrate the calculations for the sampling error on a median, we return to Table 10, and suppose that the income tabulated for this group is for January 2001. The median monthly income for this group is \$2,158 in January 2001. The size of the group is 39,851,000.

1. Using formula 8 (with $b = 4,263$ for Wave 1), the standard error of 50 percent on a base of 39,851,000 is about 0.5 percentage points.
2. Following step 2, the two percentages of interest are 49.5 and 50.5.

3. By examining Table 10, we see that the percentage 49.5 falls in the income interval from 2000 to 2499. (Since 55.5% receive more than \$2,000 per month, the dollar value corresponding to 49.5 must be between \$2,000 and \$2,500). Thus, $A_1 = \$2,000$, $A_2 = \$2,500$, $N_1 = 22,106,000$, and $N_2 = 16,307,000$.

In this case, we decided to use Pareto interpolation. Therefore, the upper bound of a 68% confidence interval for the median is

$$\$2,000 \exp \left[\left(\ln \left(\frac{(.495)(39,851,000)}{22,106,000} \right) / \ln \left(\frac{16,307,000}{22,106,000} \right) \right) \ln \left(\frac{2,500}{2,000} \right) \right] = \$2174$$

Also by examining Table 10, we see that 50.5 falls in the same income interval. Thus, A_1, A_2, N_1 and N_2 are the same. We also use Pareto interpolation for this case. So the lower bound of a 68% confidence interval for the median is

$$\$2,000 \exp \left[\left(\ln \left(\frac{(.505)(39,851,000)}{22,106,000} \right) / \ln \left(\frac{16,307,000}{22,106,000} \right) \right) \ln \left(\frac{2,500}{2,000} \right) \right] = \$2142$$

Thus, the 68-percent confidence interval on the estimated median is from \$2142 to \$2174. An approximate standard error is

$$\frac{\$2174 - \$2142}{2} = \$16$$

Standard Errors of Ratios of Means and Medians. The standard error for a ratio of means or medians is approximated by:

$$s_{\frac{x}{y}} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{s_y}{y}\right)^2 + \left(\frac{s_x}{x}\right)^2 \right]} \quad (13)$$

where x and y are the means or medians, and s_x and s_y are their associated standard errors. Formula 13 assumes that the means are not correlated. If the correlation between the population means estimated by x and y are actually positive (negative), then this procedure will tend to produce overestimates (underestimates) of the true standard error for the ratio of means.

Standard Errors Using SAS or SPSS. Standard errors and their associated variance, calculated by SAS or SPSS statistical software package, do not accurately reflect the SIPP's complex sample design. Erroneous conclusions will result if these standard errors are used directly. We provide adjustment factors by characteristics that should be used to correctly compensate for likely under-estimates. The factors called DEFF available in Table 3, must be applied to SAS or SPSS generated variances. The square root of DEFF can be directly applied to similarly generated standard errors. These factors approximate design effects which adjust statistical measures for sample designs more complex than simple random sample.

Table 4 - Factors to be Applied to Table 3 Base Parameters to Obtain Parameters for Various Reference Periods

Number of Available Rotation Months³	Factor
Monthly Estimate	
1	4.0000
2	2.0000
3	1.3333
4	1.0000
Quarterly Estimate	
6	1.8519
8	1.4074
9	1.2222
10	1.0494
11	1.0370
12	1.0000

³ The number of available rotation months for a given estimate is the sum of the number of rotations available for each month of the estimates.

Table 5 - Base Standard Errors of Estimated Numbers (in thousands) of Households, Families, and Households of Unrelated Residents

Size of Estimate	Base Standard Error	Size of Estimate	Base Standard Error
200	27	25,000	264
300	33	30,000	281
500	42	40,000	303
750	52	50,000	314
1,000	60	60,000	314
2,000	84	70,000	303
3,000	103	75,000	293
5,000	131	80,000	280
7,500	159	90,000	242
10,000	181	100,000	180
15,000	216	105,000	129

- Notes: (1) This table is developed based on Wave 1. To account for sample attrition, multiply the base standard error by a factor of 1.09 for estimates including data from Wave 2 and/or Wave 3, a factor of 1.13 for estimates including data from Wave 3 and/or Wave 4 and/or Wave 6, and a factor of 1.17 for estimates including data from Wave 7 and/or Wave 8 and/or Wave 9.
- (2) Multiply the base standard error in this table by an appropriate f factor provided in Table 3 to obtain the final standard error estimate.

Table 6 - Base Standard Errors of Estimated Numbers (in Thousands) of People

Size of Estimate	Base Standard Errors	Size of Estimate	Base Standard Errors
200	38	90,000	657
300	46	100,000	675
500	59	110,000	688
750	73	120,000	697
1,000	84	130,000	703
2,000	118	140,000	705
3,000	145	150,000	703
5,000	186	160,000	698
7,500	227	170,000	690
10,000	261	180,000	677
15,000	316	190,000	661
25,000	401	200,000	640
30,000	435	210,000	614
40,000	492	220,000	583
50,000	539	230,000	546
60,000	577	240,000	501
70,000	609	250,000	446
75,000	623	260,000	376
80,000	636	275,500	208

Notes: (1) This table is developed based on Wave 1. To account for sample attrition, multiply the base standard error by a factor of 1.09 for estimates including data from Wave 2 and/or Wave 3, a factor of 1.13 for estimates including data from Wave 3 and/or Wave 4 and/or Wave 6, and a factor of 1.17 for estimates including data from Wave 7 and/or Wave 8 and/or Wave 9.

(2) Multiply the base standard error in this table by an appropriate f factor provided in Table 3 to obtain the final standard error estimate.

Table 7 - Base Standard Errors of Estimated Percentages of Households, Families, and Households of Unrelated Residents

Base of Estimated Percentage (in Thousands)	Estimated Percentages					
	≤1 or ≥99	2 or 98	5 or 95	10 or 90	25 or 75	50
200	1.34	1.88	2.93	4.03	5.82	6.72
300	1.09	1.54	2.39	3.29	4.75	5.49
500	0.85	1.19	1.85	2.55	3.68	4.25
750	0.69	0.97	1.51	2.08	3.00	3.47
1,000	0.60	0.84	1.31	1.80	2.60	3.00
2,000	0.42	0.59	0.93	1.27	1.84	2.12
3,000	0.35	0.49	0.76	1.04	1.50	1.73
5,000	0.27	0.38	0.59	0.81	1.16	1.34

15,000	0.15	0.22	0.34	0.47	0.67	0.78
25,000	0.12	0.17	0.26	0.36	0.52	0.60
30,000	0.11	0.15	0.24	0.33	0.48	0.55
40,000	0.09	0.13	0.21	0.29	0.41	0.48
50,000	0.08	0.12	0.19	0.25	0.37	0.42
60,000	0.08	0.11	0.17	0.23	0.34	0.39
70,000	0.07	0.10	0.16	0.22	0.31	0.36
75,000	0.07	0.10	0.15	0.21	0.30	0.35
80,000	0.07	0.09	0.15	0.20	0.29	0.34
90,000	0.06	0.09	0.14	0.19	0.27	0.32
100,000	0.06	0.08	0.13	0.18	0.26	0.30
105,000	0.06	0.08	0.13	0.18	0.25	0.29

- Notes: (1) This table is developed based on Wave 1. To account for sample attrition, multiply the base standard error by a factor of 1.09 for estimates including data from Wave 2 and/or Wave 3, a factor of 1.13 for estimates including data from Wave 3 and/or Wave 4 and/or Wave 6, and a factor of 1.17 for estimates including data from Wave 7 and/or Wave 8 and/or Wave 9..
- (2) Multiply the base standard error in this table by an appropriate f factor provided in Table 3 to obtain the final standard error estimate.

Table 8 - Base Standard Errors of Estimated Percentages of People

Base of Estimated Percentage (in Thousands)	Estimated Percentages					
	≤1 or ≥99	2 or 98	5 or 95	10 or 90	25 or 75	50
200	1.87	2.63	4.09	5.63	8.13	9.39
300	1.53	2.15	3.34	4.60	6.64	7.67
600	1.08	1.52	2.36	3.25	4.69	5.42
1,000	0.84	1.18	1.83	2.52	3.64	4.20
2,000	0.59	0.83	1.29	1.78	2.57	2.97
5,000	0.37	0.53	0.82	1.13	1.63	1.88
7,500	0.31	0.43	0.67	0.92	1.33	1.53
10,000	0.26	0.37	0.58	0.80	1.15	1.33
15,000	0.22	0.30	0.47	0.65	0.94	1.08
20,000	0.19	0.26	0.41	0.56	0.81	0.94
25,000	0.17	0.24	0.37	0.50	0.73	0.84
30,000	0.15	0.21	0.33	0.46	0.66	0.77
50,000	0.12	0.17	0.26	0.36	0.51	0.59
75,000	0.10	0.14	0.21	0.29	0.42	0.48
100,000	0.08	0.12	0.18	0.25	0.36	0.42
125,000	0.07	0.11	0.16	0.23	0.33	0.38
150,000	0.07	0.10	0.15	0.21	0.30	0.34
200,000	0.06	0.08	0.13	0.18	0.26	0.30
225,000	0.06	0.08	0.12	0.17	0.24	0.28
250,000	0.05	0.07	0.12	0.16	0.23	0.27
260,000	0.05	0.07	0.11	0.16	0.23	0.26
275,500	0.05	0.07	0.11	0.15	0.22	0.25

- Notes: (1) This table is developed based on Wave 1. To account for sample attrition, multiply the base standard error by a factor of 1.09 for estimates including data from Wave 2 and/or Wave 3, a factor of 1.13 for estimates including data from Wave 3 and/or Wave 4 and/or Wave 6, and a factor of 1.17 for estimates including data from Wave 7 and/or Wave 8 and/or Wave 9.
- (2) Multiply the base standard error in this table by an appropriate f factor provided in Table 3 to obtain the final standard error estimate.

-HH01A-

There are situations in which people provide regular unpaid care or assistance to a family member or friend who has a long-term illness or a disability.

During the past month, did you provide any such care or assistance to a family member or friend living here or living elsewhere?

INCLUDE ONLY UNPAID CARE ACTIVITIES. INCLUDE ONLY THOSE CARE ACTIVITIES MADE NECESSARY BY THE ILLNESS OR DISABILITY OF THE RECIPIENT.

- (1) Yes
- (2) No

-HH02-

Did you provide such care or assistance to someone living here in the past month?

- (1) Yes
- (2) No

-HH03-

During the past month, for how many persons living here did you provide care or assistance?

_____ Number

-HH04-

For which person(s) in this household did you provide regular unpaid care or assistance? [Please list only the two persons for whom you provided the most assistance or care in the past month].

IF THERE IS ONLY ONE ENTRY, ENTER "N" AFTER THAT ENTRY.

-HH05A-

What is your relationship to ...?

- (1) Spouse
- (2) Partner
- (3) Child
- (4) Grandchild
- (5) Parent
- (6) Brother/sister
- (7) Other relative
- (8) Nonrelative

-HH06A-

For how many years have you provided care or assistance to ...?

ENTER "0" IF LESS THAN 1 YEAR.

_____ Years

-HH07A-

Now think about last month, what kind of care or assistance did you give to ...?

Did you:

- (1) Yes (2) No

- a. Help ... dress, eat, bathe, or get to the bathroom?
- b. Help with medical needs such as taking medicines or changing bandages?
- c. Help ... keep track of bills, checks, or other financial matters?
- d. Help by taking ... shopping or to the doctor's office?
- e. Help in any other way? specify

-HH07A1-

Please specify "OTHER" care or assistance provided.

-HH08A-

On average, how many hours a week did you usually spend providing care or assistance for ... in the past month?

_____ Hours

-HH09A-

Did ... receive similar unpaid care or assistance from anyone other than you in the past month?

- (1) Yes
 - (2) No
-

-HH10A-

Think about the unpaid care and assistance provided by other person(s) in the past month, on average, how many hours per week did ... usually receive care or assistance?

_____ Hours

-HH12A-

Sometimes people receive professional home health care services such as visits by nurses or therapists or home health aides. Did ... receive professional home health care services in the past month?

- (1) Yes
 - (2) No
-

-HH12A1-

In terms of professional care or assistance from home health care services, how many hours per week did ... usually receive in the past month?

_____ Hours

-HH05B-

What is your relationship to ...?

- (1) Spouse
- (2) Partner
- (3) Child
- (4) Grandchild
- (5) Parent
- (6) Brother/sister
- (7) Other relative
- (8) Nonrelative

-HH06B-

For how many years have you provided care or assistance to ...?

ENTER "0" IF LESS THAN 1 YEAR.

_____ Years

-HH07B-

Now think about last month, what kind of care or assistance did you give to ...?

Did you:

- (1) Yes (2) No

- a. Help ... dress, eat, bathe, or get to the bathroom?
- b. Help with medical needs such as taking medicines or changing bandages?
- c. Help ... keep track of bills, checks, or other financial matters?
- d. Help by taking ... shopping or to the doctor's office?
- e. Help in any other way? specify

-HH07B1-

Please specify "OTHER" care or assistance provided.

-HH08B-

On average, how many hours a week did you usually spend providing care or assistance for ... in the past month?

_____ Hours

-HH09B-

Did ... receive similar unpaid care or assistance from anyone other than you in the past month?

- (1) Yes
 - (2) No
-

-HH10B-

Think about the unpaid care and assistance provided by other person(s) in the past month, on average, how many hours per week did ... usually receive care or assistance?

_____ Hours

-HH12B-

Sometimes people receive professional home health care services such as visits by nurses or therapists or home health aides. Did ... receive professional home health care services in the past month?

- (1) Yes
 - (2) No
-

-HH12B1-

In terms of professional care or assistance from home health care services, how many hours per week did ... usually receive in the past month?

_____ Hours

-HH13-

During the past month, did you provide any unpaid care or assistance to any persons who lived outside of your home?

INCLUDE ONLY UNPAID CARE OR ASSISTANCE ACTIVITIES. INCLUDE ONLY THOSE ACTIVITIES MADE NECESSARY BY THE ILLNESS OR DISABILITY OF THE RECIPIENT.

- (1) Yes
- (2) No

-HH14-

For how many persons living outside of your home did you provide care or assistance in the past month?

_____ Number

-HH15-

What was the name(s) of the person(s) outside your home for whom you provided care or assistance? [Please list only the two persons for whom you provided the most assistance in the past month].

IF THERE IS ONLY ONE ENTRY, ENTER "N" AFTER THAT ENTRY.

1st Person's Name _____

2nd Person's Name _____

-HH16A-

What is your relationship to ?

- (1) Spouse
- (2) Partner
- (3) Child
- (4) Grandchild
- (5) Parent
- (6) Brother/sister
- (7) Other relative
- (8) Nonrelative

-HH17A-

For how many years have you provided care or assistance to ...?

ENTER "0" IF LESS THAN 1 YEAR.

_____ Years

-HH18A-

In what type of residence did ... live in the past month? Was it a house or apartment, or was it some type of care facility?

- (1) House or apartment
- (2) Care facility
- (3) Other, specify

-HH18A1-

Please specify "OTHER" type of residence.

-HH19A-

What kind of assistance did you give to ...?

Did you:

(1) Yes (2) No

- a. Help ... dress, eat, bathe, or get to the bathroom?
- b. Help with medical needs such as taking medicines or changing bandages?
- c. Help ... keep track of bills, checks, or other financial matters?
- d. Help by taking ... shopping or to the doctor's office?
- e. Other assistance? specify

-HH19A1-

Please specify "OTHER" type of assistance.

-HH20A-

On average, how many hours a week did you usually spend providing care or assistance for ...?

_____ Hours

-HH21A-

During the past month, did ... receive similar unpaid care or assistance from any other persons?

(1) Yes
(2) No

-HH21A1-

Think about the last month, how many hours per week of unpaid care or assistance did ... usually receive from that person(s)?

-HH23A-

During the past month, did you regularly spend time with ...in order to provide companionship and emotional support because of this illness or disability?

- (1) Yes
- (2) No

-HH24A-

Sometimes people receive professional home health care services such as visits by nurses or therapists or home health aides. Did ... receive professional health care or assistance during the past month?

- (1) Yes
- (2) No

-HH24A1-

In terms of professional care or assistance from home health care services, how many hours per week did ... usually receive in the past month?

_____ Hours

-HH16B-

What is your relationship to ?

- (1) Spouse
- (2) Partner
- (3) Child
- (4) Grandchild
- (5) Parent
- (6) Brother/sister
- (7) Other relative
- (8) Nonrelative

-HH17B-

For how many years have you provided care or assistance to ...?

ENTER "0"; IF LESS THAN 1 YEAR.

_____ Years

-HH18B-

In what type of residence did ... live in the past month? Was it a house or apartment, or was it some type of care facility?

- (1) House or apartment
 - (2) Care facility
 - (3) Other, specify
-

-HH18B1-

Please specify "OTHER" type of residence.

-HH19B-

What kind of assistance did you give to ...?

Did you:

- (1) Yes (2) No

- a. Help ... dress, eat, bathe, or get to the bathroom?
 - b. Help with medical needs such as taking medicines or changing bandages?
 - c. Help ... keep track of bills, checks, or other financial matters?
 - d. Help by taking ... shopping or to the doctor's office?

-

-HH21B1-

Think about the last month, how many hours per week of unpaid care or assistance did ... usually receive from that person(s)?

-HH23B-

During the past month, did you regularly spend time with ...in order to provide companionship and emotional support because of this illness or disability?

- (1) Yes
 - (2) No
-

-HH24B-

Sometimes people receive professional home health care services such as visits by nurses or therapists or home health aides. Did ... receive professional health care or assistance during the past month?

- (1) Yes
- (2) No

-HH24B1-

In terms of professional care or assistance from home health care services, how many hours per week did ... usually receive in the past month?

____ Hours

End of Informal Caregiving Topical Module

SIPP 2001 Panel Wave 7
Children's Well-Being Topical Module

-STATUS-

Are you available to answer some questions about the children in the household?

- (1) Yes
 - (2) No
-

-STATUS1-

Are you available to answer these questions?

- (1) Yes
 - (2) No
-

-APPT-

When would be a good time to contact you to answer these questions?

-LEAD-IN-

Now we are going to ask you a few questions about your children.

-CW3a-

Other than members of (child's name) immediate family, has (child's name) **EVER** been cared for regularly in any Head Start, day care, or pre-school programs or by any family day care providers or babysitters?

****NOTE: AN "IMMEDIATE FAMILY MEMBER" CAN BE ANY RELATIVE THE RESPONDENT CONSIDERS TO BE PART OF THEIR IMMEDIATE FAMILY.****

- (1) Yes
 - (2) No
-

-CW3b-

How old was (child's name) when he/she was **FIRST** cared for by someone other than you or an immediate family member on a regular basis?

___ Years
___ Months

-CW3c-

Thinking back to that time, for how many hours each **WEEK** was (child's name) usually cared for by someone else?

_____ Number of hours

-CW4a-

Has (child's name) ever lived apart from you, for any reason, for a **MONTH OR MORE**?

- (1) Yes
 - (2) No
-

-CW4b-

Thinking about these instances, did you send this child to live with someone else because he/she were not able to keep (child's name) with you?

- (1) Yes
- (2) No
- (3) Sometimes yes, sometimes no

****NOTE: CATEGORY (3) TO BE USED ONLY IF CHILD LIVED APART FROM RESPONDENT MORE THAN ONE TIME.****

-CW4c-

Did this happen at any time during the **PAST 12 MONTHS**?

- (1) Yes
 - (2) No
-

-CW5-

About how many times in the **PAST MONTH** did you or any family member take (child's name) on any kind of outing - out to the park, to church, to a playground, to visit with friends or relatives, etc.?

_____ Number of times
(N) None

-CW6a-

About how many times in the **PAST WEEK**, in total, did any family member read stories to (child's name)?

****NOTE: THE TOTAL SHOULD INCLUDE THE COMBINED NUMBER OF TIMES THAT THE MOTHER, FATHER, AND ALL OTHER FAMILY MEMBERS READ TO THE CHILD. IF TWO OR MORE PEOPLE READ TO THE CHILD TOGETHER, COUNT IT ONLY ONCE.****

_____ Number of times
(N) None

-CW6b-

About how many times in the **PAST WEEK** did you read to (child's name)?

****NOTE: INCLUDE ALL THE TIMES THE DESIGNATED PARENT READ TO THE CHILD AND THE TIMES THE DESIGNATED PARENT WAS PRESENT WHEN SOMEONE ELSE READ TO THE CHILD.****

_____ Number of times
(N) None

-CW6c-

And, about how many times in the **PAST WEEK** did you read to (child's name)?

****NOTE: INCLUDE ALL THE TIMES THE FATHER READ TO THE CHILD AND THE TIMES HE WAS PRESENT WHEN SOMEONE ELSE READ TO THE CHILD.****

_____ Number of times
(N) None

-CW7a-

Are there family rules for (child's name) about what television programs he/she can watch?

- (1) Yes
 - (2) No
-

-CW7b-

Are there family rules about how early or late (child's name) may watch television?

- (1) Yes
 - (2) No
-

-CW7c-

Are there family rules about how many hours (child's name) may watch television?

- (1) Yes
 - (2) No
-

-CW8a-

In a **TYPICAL WEEK LAST MONTH**, how many **DAYS** did you eat **BREAKFAST** with (child's name)?

_____ Days
(N) None

-CW8b-

In a **TYPICAL WEEK LAST MONTH**, how many **DAYS** did you eat **DINNER** with (child's name)?

_____ Days

(N) None

-CW8c-

In a **TYPICAL WEEK LAST MONTH**, how many **DAYS** did you eat **BREAKFAST** with (child's name)?

_____ Days

(N) None

-CW8d-

In a **TYPICAL WEEK LAST MONTH**, how many **DAYS** did you eat **DINNER** with (child's name)?

_____ Days

(N) None

-CW9a-

How often do you and (child's name) talk or play with each other for 5 minutes or more, just for fun?

(READ CATEGORIES)

- (1) Never
 - (2) About once a week (or less)
 - (3) A few times a week
 - (4) One or two times a day
 - (5) Many times each day
-

-CW9b-

How often do you and (child's name) talk or play with each other for 5 minutes or more, just for fun?

(READ CATEGORIES)

- (1) Never
 - (2) About once a week (or less)
 - (3) A few times a week
 - (4) One or two times a day

Enter (B) to backup

-PR10_PR180-

Is the plan something like a 401(k) plan, where workers contribute to the plan and their contributions are tax deferred?

- (1) Yes
- (2) No

-PR11_PR190-

Some workers participate in more than one retirement plan. For example, they might have a regular pension plan and also have some kind of retirement savings plan.

How many different pension or retirement plans do you have on this job?

_____Number of plans

-PR12_PR200-

The following question is about the plan you would consider to be your most important retirement plan on this job. There are several different types of retirement plans.

In the first type, your benefit is defined by a formula usually involving your earnings and years on the job.

In the second type of plan, contributions made by you and/or your employer go into an individual account for you.

The third type of plan shares some characteristics with the above two plans. In this type of plan, your employer contributes a value equal to a percent of each of your earnings each year and there is a rate of return on that contribution. This type of plan is sometimes called a cash balance plan.

Which type of plan are you in?

- (1) Plan based on earnings and years on the job
- (2) Individual account plan
- (3) Cash Balance Plan

-PR13_PR210-

What is your second most important plan on this job?

- (1) Plan based on earnings and years on the job
- (2) Individual account plan
- (3) Cash Balance Plan

-PR14_PR220-

The following series of questions refer to your (most important) plan.

Do you contribute any money to this plan, for example, through payroll deductions?

- (1) Yes
- (2) No

-PR14A_PR220A-

In some plans like 401(k) plans the money you contribute is tax-deferred. Are your contributions to this plan tax-deferred?

- (1) Yes
- (2) No

-PR14B_PR220B-

If were to leave your job(s) now or within the next few months, could you eventually receive some benefits from this plan when you reach retirement age?

- (1) Yes
- (2) No

-PR14C_PR220C-

If you left your job(s) now, could you get a lump-sum payment from this plan when you left?

- (1) Yes
- (2) No

-PR15_PR230-

How many years have you been included in this plan?

_____ Years

-PR16_PR231-

Will your benefits from this plan be either increased or decreased because you participate in the Social Security program?

- (1) Yes
- (2) No
- (3) Do not participate in Social Security

-PR17_PR232-

How much has your employer(s) contributed to your plan within the last year?

-PR18_PR233-

As of the end of (reference month 4), what was the total amount of money in your account?

Did you withdraw the money voluntarily, or did the plan require you to withdraw it?

- (1) Voluntarily
- (2) Required to withdraw

-PR59_PR530-

What was the total amount of the lump sum or rollover?

-PR60_PR540-

What is your best estimate of the lump sum or rollover amount?

READ ALL CATEGORIES.

- (1) Less than \$5,000
- (2) \$5,000 to \$10,000
- (3) \$10,001 to \$25,000
- (4) \$25,001 to \$50,000
- (5) \$50,001 to \$75,000
- (6) \$75,001 or more

-PR61_PR550-

Did you actually receive the money, or was it directly rolled over into another plan or to an IRA?

- (1) Actually received
- (2) Directly rolled over

-PR62_PR560-

After receiving the lump sum payment, did you then roll any of the money over into another retirement plan or into an IRA?

- (1) Yes
- (2) No

-PR63_PR570-

Did you roll it over into another plan on your job, an individual annuity, an IRA, or some other type of plan?

- (1) Plan on job
- (2) Individual annuity
- (3) IRA
- (4) Other

-PR64_PR571-

Did you roll over the entire amount or just part of it?

- (1) Entire amount
- (2) Partial amount

-PR65_PR580-

People who receive lump sums may spend or invest the money in many different ways. How did you use the money from the lump sum you received?

ENTER ALL THAT APPLY. ENTER "N" AFTER LAST ENTRY.

- (01) Invested in an IRA, annuity, or other retirement program
- (02) Put it into a savings account or CDs
- (03) Invested in other financial instruments (stocks, mutual funds, bonds, money market funds)
- (04) Invested in land, other real properties
- (05) Invested in own or family business or farm
- (06) Used for housing (purchase, paid off mortgage, home improvements/repairs)
- (07) Paid bills, loans, or other debts

- (08) Bought a car, boat, furniture, or other consumer items
- (09) Vacation, travel, or recreation
- (10) Paid expenses while laid off
- (11) Moving or relocation expenses
- (12) Medical or dental expenses
- (13) Paid or saved for education
- (14) General or everyday expenses
- (15) Gave to family members or charities
- (16) Paid taxes
- (17) Saved for retirement expenses
- (18) Saved or invested in other ways
- (19) Spent in other ways

-PR66_PR600-

Earlier you said you received some pension or retirement income other than Social Security during the period from (reference month 1) through (reference month 4). Will you continue to receive these benefits for the rest of your life, or will it be just a limited number of payments, or was it just a single lump sum payment?

ENTER ALL THAT APPLY.
ENTER "N"; AFTER LAST ENTRY.

- (1) Rest of life
- (2) Limited number of payments
- (3) Lump-sum payment

-PR67_PR610-

Did you receive this income from more than one pension plan?

- (1) Yes
- (2) No

-PR68_PR620-

How many different plans did you receive this income from?

-PR69_PR640-

The following questions refer to the pension or retirement plan that pays the largest amount of lifetime benefits. The following questions refer to the benefits you are receiving in a limited number of payments. The following questions refer to the benefits you received as a lump-sum payment. Does this pension benefit come from a job or business that you held in the past, or does it come from a job or business held by your former spouse?

- (1) Respondent's job
 - (2) Respondent's former spouse's job
 - (3) Other
-

-PR70_PR650-

In what year did you begin receiving this pension?

_____ Year

-PR71_PR660-

Was the amount of this pension payment based on years of service and pay, or on the amount of money held in an individual account for you?

- (1) Years of service and pay
 - (2) Amount in individual account
-

-PR72_PR670-

Were reduced benefits taken in order to elect a survivor's option?

- (1) Yes
 - (2) No
 - (3) No survivor's option offered
-

-PR73_PR680-

Has the amount of your pension ever increased for any reason?

- (1) Yes
 - (2) No
-

-PR74_PR690-

Does your pension plan provide for automatic cost-of-living adjustments known as COLA's?

- (1) Yes
 - (2) No
-

-PR75_PR700-

Did the amount of your pension payment ever decrease for any reason?

- (1) Yes
- (2) No

-PR76_PR710-

How much did you receive from this plan each month when you first began receiving the pension payment?

-PR77_PR720-

How much do you currently receive EACH MONTH from this plan?

-PR78_PR730-

Now I have some questions about your most recent lump sum payment. Did this payment come from a job or business you held in the past, or did it come from a job or business held by your former spouse?

- (1) Respondent's former job
- (2) Respondent's former spouse's job
- (3) Other

-PR79_PR740-

Have you ever retired from a job or business?

- (1) Yes
- (2) No

-PR80_PR750-

Have you ever worked for pay as much as five years or more?

- (1) Yes
- (2) No

-PR81_PR751-

Did you retire from a job or from a business?
Was your longest employment on a job or in a business?
Did this pension benefit come from a job or from a business?

- (1) Job
 - (2) Business
-

-PR82_PR760-

(The next questions are about the job from which you received this pension or retirement income./The next questions are about the job from which you received this most recent lump-sum payment./The next questions are about the job from which you retired.
The next questions are about the job on which you worked the longest.)

What type of organization was that?

- (1) A Government organization (including Armed Forces)
- (2) A Private for profit Company
- (3) A non-profit organization including tax-exempt and charitable organizations
- (4) A family business or farm?

-PR83_PR770-

Was that Federal Government, State Government, Local Government, or active duty Armed Forces?

- (1) Federal Government (civilian)
- (2) State Government
- (3) Local Government (county, city, township)
- (4) Active duty Armed Forces

-PR84_PR780-

What was the main function or activity of the government organization that you worked for ?

-PR85_PR781-

Did you work as a paid or unpaid employee for the family business or farm?

- (1) For pay
- (2) Unpaid worker

-PR86_PR790-

What kind of business or industry was that?

READ IF NECESSARY:

What did they make or do where you worked?

-PR87_PR810-

Was it mainly?

- (1) Manufacturing
- (2) Wholesale Trade
- (3) Retail Trade
- (4) Service
- (5) Some other kind of business?

-PR88_PR820-

What kind of work were you doing on that job, that is, what was your occupation?

For example: Bookkeeper, Plumber, Press operator

-PR89_PR830-

What were your usual activities or responsibilities on that job?

For example: Keeping account books, repairing pipes, operating printing presses

-PR90_PR840-

Did your employer operate in more than one location?

- (1) Yes
- (2) No

-PR91_PR850-

How many people were employed at the location where you worked?

- (1) less than 10
 - (2) 10 to 24
 - (3) 25 to 49
 - (4) 50 to 99
 - (5) 100 to 249
 - (6) 250 to 499
 - (7) 500 to 999
 - (8) 1,000 or more
-

-PR92_PR860-

About how many people were employed by that employer at all locations?
About how many people were employed by that employer?

- (1) less than 10
- (2) 10 to 24
- (3) 25 to 49
- (4) 50 to 99
- (5) 100 to 249
- (6) 250 to 499
- (7) 500 to 999
- (8) 1,000 or more

-PR93_PR870-

When you worked for that employer, were you covered under a union or employee association contract?

- (1) Yes
- (2) No

-PR94_PR880-

How many hours per week did you usually work at that job?

_____ Hours

-PR95_PR890-

How many weeks during the year did you usually work at that job? Include paid vacation and sick leave as work time.

SIPP 2001 Wave 7 Evaluation Report: Child Well-Being Topical Module

Introduction

This memorandum presents basic tabulations used to evaluate the Child Well-Being Topical Module from the Wave 7 interview of the 2001 Survey of Income and Program Participation (SIPP). The data from this topical module were collected February through May 2003. The child well-being data were collected for 18,413 children ages 0 to 17 years linked to 9,925 designated parents.¹ For purposes of analyses in this report, the majority of data are presented with children as the unit of analysis, i.e., each child is an observational unit, as responses were obtained for all children in the household. Data are also presented for the designated parents in Table 2.

The survey universe of children from this module is compared with data from the March 2003 Current Population Survey (CPS), the 1996 Panel Wave 12 (conducted December 1999 through March 2000), the 1996 Wave 6 (December 1997 through March 1998), and the 1992 Panel Wave 9 and 1993 Panel Wave 6 combined Child Well-Being topical modules which were conducted in Fall 1994. Table 1 provides age, sex, and race comparisons. Population distributions from Wave 7 of the 2001 SIPP Panel closely replicate those from the March 2003 CPS, generally within 1 to 2 percentage points by age, race, and sex. One slightly higher difference (2.7 percentage points) occurred for White non-Hispanic children under age 6 in the SIPP compared to the March 2003 CPS.

The difference, however, was less than between the 1996 SIPP Panel Wave 12 and the March 2000 CPS (4.8 percentage points).

Allocation Rates

Allocation rates for selected child well-being items by race and Hispanic origin are presented in Table 2. Rates are presented for questions concerning children as well as for questions asking designated parents' views on their children and neighborhood. The allocation rates for Wave 7 are, for the most part, lower than SIPP 1996, Wave 12. The percents for Wave 7 vary from the mid-teens to mid-twenties with an occasional higher rate. The lower allocation rate in Wave 7 as compared with 1996 Wave 12 may be because the topical module was moved to a wave with relatively few topical modules (Annual Income and Retirement Accounts; Taxes, Retirement and Pension Plan Coverage; and Home Health Care).

¹ The designated parent includes biological, step, and adoptive parents, and may also include other relatives or nonrelatives acting as a guardian for the child in the absence of the parents. In married-couple families, the mother is the designated parent. If the mother is not available for an interview, the father or husband may provide the mother's information as a proxy respondent. In single-parent families, the resident parent is the designated parent. If neither parent is in the household, the guardian is the designated parent.

Allocation rates were generally higher for Blacks than Whites, by an average of about 7 percentage points. However, allocation rates found between Hispanics and White non-Hispanics were smaller, differing by about 1.5 percentage points.

Reasonableness of the Child Well-Being Data

Table 3 compares child well-being data from 2001 Wave 7 (2003 data) with the 1996 Waves 12 and 6 (2000 and 1998 data) and the combined 1992 and 1993 waves (1994 data). The 2000 and 1998 data were in the published report, P70-89, "A Child's Day: 2000 (Selected Indicators of Child Well-Being) or in its detailed tables on the Internet. The 1994 data were published in P70-68, "A Child's Day: Home, School, and Play (Selected Indicators of Child Well-Being). A major comparability difference between items in 1994 and the latter years (2003, 2000, and 1998) is that the 1994 data were not allocated.

Data for 2003 (2001, Wave 7) are comparable with 2000 data (1996 Wave 12).

Caution should be exercised when making comparisons between the 1994 SIPP data and the data from all other years (Table 3). Aside from the allocation issue, differences in responses may also arise from seasonal variations between the surveys. In addition, the variable EDAYCARE in the 2001 and 1996 SIPP Panels is not directly comparable with a similar question on ever being in child care which was collected in 1994. In each survey, the two questions were worded exactly the same: "Other than members of ...'s immediate family, has ... ever been cared for regularly in any Head Start, day care or pre-school programs or by any family day care providers or babysitters?" However, two questions in the 1994 surveys included relatives as day care providers which preceded this question. They were: (1) "Is ... now enrolled in family day care, that is, in the home of a neighbor, friend, or relative on a regular basis? By "regular basis" we mean at least once a week." and (2) "Is ... now being cared for by a babysitter or babysitters in the child's home on a "regular basis" (includes care by relatives other than parents)?" The 1994 data, then, potentially included relatives as child care providers. The total "ever care" percentages shown in Table 3 are a combination of ever being in child care among respondents who said "yes" to any of these three items.

Since EDAYCARE for the 2001 and 1996 panels is not comparable with 1994 data, the variables ECAREMTH (age at first child care) and EHRSCARE (hours per week in first child care) are also not comparable. Also in 1994, an average age at first day care could be obtained from ECAREMTH. An average is not possible from the grouped categories used in the 2001 and 1996 panels. For 2004, we are returning to the style of the 1994 survey and asking for exact months in order to obtain an average age at first child care.

For children ever in child care in 2003, the data show a decrease from 2000 for children under 3 years. For children 3 to 5 years and 6 to 11 years, the data are almost identical.

For children who have ever repeated a grade, the data are also similar.

For children 1 and 2 years, there was a slight increase between 2000 and 2003 in the percent of children who were not read to in the last week. There was an increase in the percent of children

with three types of tv rules since 2000 for children 3 to 5 years and 12 to 17 years. Participation in sports increased for both children 6 to 11 and 12 to 17.

Summary

The 2001 Wave 7 data on child well-being appear to be reasonable. We have confidence that these data are reliable and useful for analysis of the well-being of America's children as long as caution is exercised in comparing data with prior SIPP surveys which have slightly different item wording or conducted in different seasons which might influence children's activities.

Children who have ever repeated a grade /4											
6 to 11 years	24631	1410	5.7	24214	1272	5.3	23835	1377	5.8	18936	
12 to 17 years	24867	2587	10.4	23417	2514	10.7	23205	2803	12.1	17058	

/1 Universe consists of children for whom valid answers were reported.

/2 Data for 1994 include children ever cared for by relatives other than the child's parents. The 2003, 1999/2000, and 1997/98 data do not include relatives.

/3 Questions were asked whether there were rules on type of program watched, time of day programs viewed, and number of hours watched.

/4 Universe consists of children who have ever attended or been enrolled in kindergarten, first grade, or any grade in elementary school.
