ABSTRACT

Survey of Income and Program Participation (SIPP) 1996 Panel, Wave 8 Topical Module Microdata File [machine-readable data file] / conducted by the U.S. Bureau of the Census. -Washington: The Bureau [producer and distributor], 2001.

Type of File:

Microdata; unit of observation is an individual.

Universe Description:

The universe is the resident population of the United States, excluding persons living in institutions and military barracks.

Subject-Matter Description:

The file contains data primarily from the topical module portion of the questionnaire. However, for purposes of matching persons to the core file, which was released separately, the beginning of the file contains identifying information as well as some basic demographic and social characteristics that are also contained in the core file. The identifying information includes sample unit, household address, and entry address identification. Demographic and social characteristics include age, sex, race (White; Black; American Indian, Eskimo, and Aleut; Asian or Pacific Islander), ethnic origin (34 categories including 9 Spanish origin categories), marital status, and education. Data in this topical module file include household relationships, work disability history, education and training history, marital history, fertility history, and migration history.

The sample consists of 4 rotation groups, each interviewed in a different month from August 1998 to November 1998. For each group the reference period for reporting labor force activity and income is the four calendar months preceding the interview month.

SIPP is a longitudinal survey where each sampled household and each descendent household is reinterviewed at 4-month intervals for 12 interviews or "waves." This file contains the results of the **eighth** interview. Unique codes are included on each record to allow linking together the same persons from the preceding and subsequent waves.

Geographic Coverage:

United States. Codes are included for 45 individual States and the District of Columbia, **although the sample was not designed to produce State estimates**. Areas in the SIPP sample in five States are identified in two groups for confidentiality reasons. The file identifies a subsample of metropolitan residents, along with codes for selected metropolitan statistical areas (MSA's) and consolidated metropolitan statistical areas (CMSA's).

Technical Description:

File Structure: Rectangular. Each logical record for a sampled person includes information on the household and family of which the person was a part during each month of the reference period, as well as characteristics of the person.

File Size: 76,978 logical records; 2,040 character logical record length.

File Sort Sequence of Sample Units: Sampling unit identification number by entry address ID and person number within sampling unit.

Reference Materials:

Survey of Income and Program Participation (SIPP) 1996 Panel, Wave 8 Topical Module Microdata File Technical Documentation. The documentation includes this abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on SIPP.

Survey of Income and Program Participation Users' Guide. *The Users' Guide* contains a general overview of the file as well as chapters on survey design and content, structure and use of cross-sectional files, linking waves and reliability of the data. Additional copies are available from Marketing Services Office, Customer Services Center, Bureau of the Census, Washington, DC 20233.

Related Printed Reports:

Related printed reports include working papers, compilations of papers presented at annual meetings of the American Statistical Association, articles appearing in the *Journal of Economic and Social Measurement*, and reports in the P-70 series of the Current Population Reports.

Related Machine-Readable Data Files:

SIPP files from all Waves of the 1984 through 1993 Panels, and 1996 Panel, Waves 1 through 6, and 8 are available from Customer Services Center, Marketing Services Office, Bureau of the Census, Washington, D.C. 20233. Some files (1990 - 1993) may be downloaded in ASCII from the Data Extraction System (DES) SURVEY-ON-CALL at <http://www.census.gov/DES/www/welcome.html> Files (1996 forward) may be downloaded from the Federal Electronic Research and Review Extraction Tool (FERRET) at <http://www.ferret.bls.census.gov/cgi-bin/ferret>

File Availability:

Files are available on CD-ROM. Pricing information is available from Customer Services (301) 763-INFO (4636) ([order form](#) attached). This file also may be downloaded from the Federal Electronic Research and Review Extraction Tool (FERRET) at <http://www.ferret.bls.census.gov/cgi-bin/ferret>

Census Bureau Order Form

Use this form to order CD-ROM's, tape-to-CD-ROM, customer products, technical documentation, computer tapes and cartridges, diskettes, and publications sold by Customer Services.

Charge your order: It's easy! MasterCard - VISA
To fax your order: 888-249-7295
Phone orders and special handling: 301-763-INFO (4636)

Please Type or Print. Prices include regular domestic postage and handling. **International customers, please add 33%.**

FILE INFORMATION

Matching Topical Module File with Core File

Since the core and topical module data are released as separate files, it may be necessary to match the two files. The two files contain the following information for linking purposes.

SSUID	Scrambled sample unit identifier
SPANEL	Panel year
SWAVE	Wave of data collection
SROTATION	Rotation of data collection
TFIPSST - FIPS	State code for the fifth month
EOUTCOME	Interview status code for the fifth month
SHHADID	Household address ID in the fourth reference month
SINTHHID	Household address ID of person in interview month
RFID	Family ID number in month four
RFID2	Family ID excluding related subfamily members
EPPIDX	Person index
EENTAID	Address ID of household where person entered sample
EPPNUM	Person number
EPOPSTAT	Population status based on age in fourth reference month
EPPINTVW	Person's interview status at time of interview
EPPMIS4	Person's fourth month interview status
ESEX	Sex of this person
ERACE	Race of this person
EORIGIN	Origin of this person
EFINWGT	Person weight
ERRP	Household relationship
EMS	Marital status
EPNMON	Person number of mother
EPNDAD	Person number of father
EPNGUARD	Person number of guardian
EPNSPOUS	Person number of spouse
RDESGPNT	Designated parent or guardian flag
TAGE	Age as of last birthday at the end of the fourth month
EEDUCATE	Highest degree received or grade completed

Geographic Coverage

State codes are shown except for five States which are identified in two groups. A subsample of metropolitan residents is identified along with codes for selected metropolitan statistical areas (MSA's) and consolidated metropolitan statistical areas (CMSA's). **The sample was not designed to produce State or MSA/CMSA level estimates.** State codes are primarily useful in relating a respondent's reciprocity of benefits to thresholds which may vary from State to State. MSA/CMSA codes may be used in relating respondent characteristics with contextual variables.

Identification Number System

The SIPP identification scheme is designed to uniquely identify individuals in each wave, provide a means of linking the same individuals over time, and group individuals into households and families over time.

The various components of the identification scheme are listed below:

SSUID	Sample Unit Identification Number
SINTHHID	Address ID
EENTAID	Entry Address ID
EPPPNUM	Person Number

The sample unit identification number was created by scrambling together the PSU, segment, and serial numbers used for Census Bureau administrative purposes. This identifier is constructed the same way on each wave regardless of moves, to enable matching from wave to wave.

The two-digit address ID code identifies each household associated with the same sample unit identification number. The first digit of the address ID code indicates the wave in which that address was first assigned for interview. The second digit sequentially numbers multiple households that have the same serial number. The address ID code is 11 for all sample addresses that are the same as in Wave 1. As SIPP sample persons move to new addresses, new address ID codes are assigned. Any new address to which sample unit members moved during Wave 4 is numbered in the 40's.

The person ID is a five-digit number consisting of the two-digit entry address ID and a three-digit person number. Person numbers 101, 102, etc., are assigned in Wave 1; 201, 202, etc., are assigned to persons added to the roster in Wave 2, and so forth. This five-digit number is not changed or updated, regardless of moves.

The sampling unit serial number and address ID code uniquely identifies each household in any given wave. The sampling unit serial number can link all households in subsequent waves back to the original Wave 1 household.

Topcoding of Income Variables

To protect against the possibility that a user might recognize the identity of a SIPP respondent with very high income, income from every source is "topcoded" so that no individual income amounts above \$150,000 are revealed. While the data dictionary indicates a topcode of 50,000 for monthly income, this topcode will rarely be used. In most cases the monthly income is shown as an individual dollar amount of \$12,500, with \$12,500 actually representing "\$12,500 or more." (the \$150,000 annual income topcode is \$12,500 multiplied by 12 months). Individual monthly amounts above \$12,500 may occasionally be shown if the respondent's income varied considerably from month to month, as long as the average does not exceed \$12,500. For example, if a respondent's income from a single job were concentrated in only one of the four reference months, a figure as high as \$50,000 could be shown. (Income from interest or property have lower topcodes).

Summary income figures on the person, family, and household records are simple sums of the components shown on the file after topcoding, and are not independently topcoded. Thus, a person with high income from several sources (jobs, businesses, property) could have aggregate monthly income well over the topcode for each source. Families and households with a number of high income members could theoretically have aggregate income shown well over \$150,000, though well below the \$1.5 million shown as the highest allowable value in the data dictionary.

The user is cautioned against trying to make much use of the occasional monthly figures above \$12,500, except in calculating aggregates or observing patterns across the 4-month period for a single individual, family, or household. Those units with higher monthly amounts shown are a biased sample of high income units, more likely to include units with income from multiple sources than other units with equally high aggregate income which comes from a single source.

INDEX TO 1996 WAVE 8 TOPICAL MODULE FILES

Key to Concept Labels

AW - Adult Well-being Variables
 ED - Education Variables
 FA - Family Variables
 HH - Household Variables
 PE - Person, Demographic, and Coverage Variables
 SU - Sample Unit Variables
 WR - Welfare Reform Variables
 WW - Weighting Variables

HOW TO USE THE DATA DICTIONARY

The Data Dictionary describes the file contents and provides locations for each variable (record layout of the public-use computer tape file.) The first line ("D" Line) of each data item description gives the variable name, size of the data field, and the begin position of that field. The components include a short mnemonic or field name for use with software packages; field size; starting position; and a description of field contents with possible values.

The next few lines contain descriptive text and any applicable notes. Categorical value codes and labels are given where needed. Comment notes marked by an (*) are provided throughout for the rest of the dictionary components. Comments should be removed from the machine-readable version of the data dictionary before using it to help access the data file.

The first line of each data item description begins with the character "D" (left-justified, two characters). The "D" flag indicates lines in the data dictionary containing the name, size and begin position of each data item. The second line of each data item description begins with the character "T" (left-justified, two characters). The "T" flag indicates lines in the data dictionary containing the category code and short description of the variable. The line beginning with the character "U" describes the universe for that item. Lines containing categorical value codes and labels follow next and begin with the character "V". The special character (.) denotes the start of the value labels. Two examples of data item descriptions follow:

```
D RNOTAKE      2      813
T LF: Reason couldn't start job
  Why couldn't ... have started a job?
U All persons 15+ at the end of the
  reference period who were unable to start
  a job during weeks on layoff or looking
  for work.
  EPOPSTAT = 1 and RTAKJOB = 2
V      -1 .Not in universe
V      1 .Waiting for a new job to begin
V      2 .Own temporary illness
V      3 .School
V      4 .Other
```

```
D RRRSN        2      1218
T GI: Reason for receipt of Railroad
  Retirement pay
  For what reason or reasons did ...
  receive Railroad Retirement pay during
  the reference period? ISS Code 2
U All persons 15 to 69 who receive
  disability income and/or persons 15+ at
  the end of the reference period who
  receive retirement income and/or survivor
  benefits.
V      -1 .Not in universe
V      1 .Disability
V      2 .Retirement
V      3 .Survivor
V      4 .Disability and retirement
V      5 .Disability and survivor
V      6 .Retirement and survivor
V      7 .Disability, retirement, and
  .survivor
V      8 .No payment received
```

D RFID 3 36

T FA: Family ID Number in month four
Family ID number may be used to identify
all persons in the same family in the
fourth reference month of a given wave.
This ID is used for primary families,
unrelated subfamilies, primary and
secondary individuals. Persons related
subfamilies have the primary family ID in
this field.

U All persons

V 1:120 .Family ID number

D RFID2 3 39

T FA: Family ID excluding related subfamily
members
Family ID number excluding members of
related subfamilies. Defined as of the
fourth reference month of a given wave.
This ID is used for all persons except
related subfamily members.

U All persons except those in related
subfamilies (excludes persons with ESFTYPE =
2)

V 0 .Member of related subfamily

V 1:120 .Family ID number

D EPPIDX 3 42

T PE: Person index
Person index. This field differentiates
persons within the sample unit. Person
index is unique within the sample unit
and wave.

U All persons

V 1:999 .Person index

D EENTAID 3 45

T PE: Address ID of hhld where person entered
sample
Address ID of the household that this
person belonged to at the time this
person first became part of the sample.
Address ID in a specific wave should
never be greater than (WAVE * 10 + 9).

D EAFCHLD 2 396
T AW: Children were not eating enough
AW63_FOOD5 I'm going to read you some
statements that people have made about
their food situation. For these
statements, please tell me whether it was
OFTEN TRUE, SOMETIMES TRUE, or NEVER TRUE
for ... in the last four months. The next
statement is: "(MY CHILD WAS/OUR CHILD
WAS/ THE CHILDREN WERE) not eating enough
because (I/WE) couldn't afford enough
food." Was that often, sometimes or never
true for ... in the last four months?
U All households with children under 18
reporting not enough to eat or food didn't
last or couldn't afford balanced meals.
(EAFBALN=1 or 2, OR EAFLAST=1 or 2, OR
EAFOD1=3 or 4 AND children in household

SOURCE AND ACCURACY STATEMENT
for the 1996 Public Use Files from the
Survey of Income and Program Participation¹

SOURCE OF DATA

The data was collected in the 1996 Panel of the Survey of Income and Program Participation (SIPP). The SIPP universe is the noninstitutionalized resident population living in the United States. The population includes persons living in group quarters, such as dormitories, rooming houses, and religious group dwellings. Crew members of merchant vessels, Armed Forces personnel living in military barracks, and institutionalized persons, such as correctional facility inmates and nursing home residents, were not eligible to be in the survey. Also, United States citizens residing abroad were not eligible to be in the survey. Foreign visitors who work or attend school in this country and their families were eligible; all others were not eligible to be in the survey. With the exceptions noted above, persons who were at least 15 years of age at the time of the interview were eligible to be in the survey.

The 1996 Panel of the SIPP sample is located in 322 Primary Sampling Units (PSUs), each consisting of a county or a group of contiguous counties. Within these PSUs, living quarters (LQs) were systematically selected from lists of addresses prepared for the 1990 decennial census to form the bulk of the sample. To account for LQs built within each of the sample areas after the 1990 census, a sample containing clusters of four LQs was drawn of permits issued for construction of residential LQs up until shortly before the beginning of the panel.

In jurisdictions that don't issue building permits or have incomplete addresses, we systematically sampled expected clusters of four LQs which were listed by field personnel and then subsampled in the field. In addition, we selected sample LQs from a supplemental frame that included LQs identified as missed in the 1990 census.

For the first interview of the panel, Wave 1, we obtained interviews from occupants of about 36,700 of the 49,200 designated living quarters. We found most of the remaining 12,500 living quarters in the panel to be vacant, demolished, converted to nonresidential use, or otherwise ineligible for the survey. However, we did not interview approximately 3,400 of the 12,500 living quarters in the panel because the occupants, (1) refused to be interviewed, (2) could not be found at home, (3) were temporarily absent, or (4) were otherwise unavailable. Thus, occupants of about 92 percent of all eligible living quarters participated in the first interview of the panel.

For subsequent interviews, only original sample persons (those in Wave 1 sample households and interviewed in Wave 1) and persons living with them were eligible to be interviewed. We followed original sample persons if they moved to a new address, unless the new address was more than 100 miles from a SIPP sample area. Then, we attempted telephone interviews.

¹ For questions or further assistance with the information provided in this document contact Karen E. King of the Demographic Statistical Methods Division on (301) 457-4192 or via the e-mail using karen.e.king@census.gov.

Sample households within a given panel are divided into four random subsamples of nearly equal size. These subsamples are called rotation groups and one rotation group is interviewed each month. Each household in the sample was scheduled to be interviewed at 4 month intervals over a period of roughly 4 years beginning in April 1996. The reference period for the questions is the 4-month period preceding the interview month. In general, one cycle of four interviews covering the entire sample, using the same questionnaire, is called a wave.

The public use files include core and supplemental (**topical module**) data. Core questions are repeated at each interview over the life of the panel. Topical modules include questions which are asked only in certain waves. The 1996 Panel topical modules are given in Table 1.

Table 2 indicates the reference months and interview months for the collection of data from each rotation group for the 1996 Panel. For example, Wave 1 rotation group 1 of the 1996 Panel was interviewed in April 1996 and data for the reference months December 1995 through March 1996 were collected.

Estimation. We used several stages of weight adjustments in the estimation procedure to derive the SIPP cross-sectional person level weights. We gave each person a base weight (**BW**) equal to the inverse of probability of selection of a person's household. We applied two noninterview adjustment factors. One adjusted the weights of interviewed persons in interviewed households to account for households which were eligible for the sample but which field representatives could not interview at the first interview (F_{N1}). The second compensated for person noninterviews occurring in subsequent interviews (F_{N2}). We used a Duplication Control Factor (**DCF**) which adjusts for subsampling done in the field when the number of sample units is much larger than expected. We applied a Mover's Weight (**MW**), which adjusts for persons in the SIPP universe who move into sample households after Wave 1. The last weight applied is the Second Stage Adjustment Factor (F_{2S}). This weight adjusts estimates to population controls and causes husbands' and wives' weights to be equal.

The final cross-sectional weight is $FW_c = BW (DCF (F_{N1} (F_{2S}$ for Wave 1 and is $FW_c = IW (F_{N2} (F_{2S}$ for Waves 2+, where **IW** is either $BW (DCF (F_{N1}$ or **MW**. James (1995) and Siegel (1995a) describe SIPP cross-sectional weighting in greater detail.

Researchers both inside and outside the Census Bureau conducted evaluations of SIPP weighting methodology and researched alternative methodologies. We are making several improvements to SIPP weighting methods beginning with this panel. They are described below.

- We dropped the first stage factor (F_{1S}) from cross-sectional weighting. This factor adjusted for differences between the Census count of population and an estimate of that count based on Census data for sample PSUs. James (1994) found that it did not reduce variance as was previously believed. Jabine, et al (1990) describe the first stage factor used in earlier panels.
- We are using additional variables in nonresponse adjustment. We added high/low poverty stratum code to the Wave 1 nonresponse adjustment, and we added household income, geographic division, and number of imputations for selected income and asset items to the nonresponse adjustment for Waves 2+. Research by Rizzo, et al (1994) and by Folsom and Witt (1994) pointed out the potential of the latter three variables in reducing nonresponse bias.

- We redefined nonresponse adjustment cells for Waves 2+ weighting. We formed the nonresponse cells by successively partitioning data from five panels by whichever variable most reduced the bias of the household income to poverty threshold ratio. We used data from a sixth panel to evaluate the results. We calculated the nonresponse bias of six variables at Waves two and seven for both the new cells and the original cells using initial weights and data from the most recent interview in the calculations. The new cells had lower bias for five of the six variables (Siegel, 1995b).

Research was conducted on a number of promising weighting improvements. Allen and Petroni (1994) reported on an adjustment for mover attrition. Folsom and Witt (1994) and Rizzo, et al (1994) studied alternative nonresponse adjustments using response propensity models. Each study computed weights using an alternative methodology. The researchers then compared estimates of various items to benchmarks. The benchmarks came from administrative records and survey data with less nonresponse than the SIPP. The comparisons did not provide strong evidence of lower bias using the alternative weighting methods.

Additional Methodology

Use of Weights. Each household and each person within each household on each wave tape has four weights. These four weights are reference month specific and therefore can be used only to form reference month estimates. Reference month estimates can be averaged to form estimates of monthly averages over some period of time.

Example, using the proper weights, one can estimate the monthly average number of households in a specified income range over November and December 1996. To estimate monthly averages of a given measure (such as, total, mean) over a number of consecutive months, sum the monthly estimates and divide by the number of months.

To form an estimate for a particular month, use the reference month weight for the month of interest, summing over all persons or households with the characteristic of interest whose reference period includes the month of interest. Multiply the sum by a factor to account for the number of rotations contributing data for the month. This factor equals four divided by the number of rotations contributing data for the month. For example, December 1995 data is only available from rotation 1 for Wave 1 of the 1996 Panel (See Table 2), so a factor of 4/1 must be applied.

When estimates for months with less than four rotations worth of data are constructed from a wave file, factors greater than 1 must be applied. However, when core data from consecutive waves are used together, data from all four rotations may be available, in which case the factors are equal to 1.

These tapes contain no weight for characteristics that involve a persons's or household's status over two or more months (such as, number of households with a 50 percent increase in income between November and December 1995).

Producing Estimates for Census Regions and States. The total estimate for a region is the sum of the state estimates in that region. Using this sample, estimates for individual states are subject to very high variance and are not recommended. The state codes on the file are primarily of use in linking respondent characteristics with appropriate contextual variables (for example, state-specific welfare

criteria) and for tabulating data by user-defined groupings of states.

Producing Estimates for the Metropolitan Population. For Washington, DC and 14 other states, metropolitan or non-metropolitan residence is identified (variable H*-METRO). In 28 additional states, where the non-metropolitan population in the sample was small enough to present a disclosure risk, a fraction of the metropolitan sample was recoded to be indistinguishable from non-metropolitan cases (H*-METRO=2). In these states, therefore, the cases coded as metropolitan (H*-METRO=1) represent only a subsample of that population.

In producing state estimates for a metropolitan characteristic, multiply the individual, family, or household weights by the metropolitan inflation factor for that state, presented in Table 3. (This inflation factor compensates for the subsampling of the metropolitan population and is 1.0 for the states with complete identification of the metropolitan population.)

The same procedure applies when creating estimates for particular identified MSA's or CMSA's-- apply the factor appropriate to the state. For multi-state MSA's, use the factor appropriate to each state part. For example, to tabulate data for the Maine, ME-VT, apply the Vermont factor of 1.57953 to weights for residents of the Vermont part of the MSA; Maine residents require the same modification to the weight (i.e., their factors also equal 1.57953).

In producing regional or national estimates of the metropolitan population, it is also necessary to compensate for the fact that no metropolitan subsample is identified within two states (Mississippi and West Virginia). Thus, factors in the right-hand column of Table 3 should be used for regional and national estimates. The results of regional and national tabulations of the metropolitan population will be biased slightly. However, less than one-half of one percent of the metropolitan population is not represented.

Producing Estimates for the Non-Metropolitan Population. State, regional, and national estimates of the non-metropolitan population cannot be computed directly, except for Washington, DC and the 14 states where the factor for state tabulations in Table 3 is 1.0. In all other states, the cases identified as not in the metropolitan subsample (METRO=2) are a mixture of non-metropolitan and metropolitan households. Only an indirect method of estimation is available: first compute an estimate for the total population, then subtract the estimates for the metropolitan population. The results of these tabulations will be slightly biased.

ACCURACY OF ESTIMATES

SIPP estimates are based on a sample; they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaire, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: nonsampling and sampling. We are able to provide estimates of the magnitude of SIPP sampling error, but this is not true of nonsampling error. Found in the next sections are descriptions of sources of SIPP nonsampling error, followed by a discussion of sampling error, its estimation, and its effect in data analyses.

Nonsampling Error. Nonsampling errors can be attributed to many sources:

- C inability to obtain information about all cases in the sample
- C definitional difficulties
- C differences in the interpretation of questions
- C inability or unwillingness on the part of the respondents to provide correct information
- C inability to recall information, errors made in the following: collection such as in recording or coding the data, processing the data, estimating values for missing data
- C biases resulting from the differing recall periods caused by the interviewing pattern used
- C and undercoverage.

Quality control and edit procedures were used to reduce errors made by respondents, coders and interviewers. More detailed discussions of the existence and control of nonsampling errors in the SIPP can be found in the *SIPP Quality Profile, 1998 SIPP Working Paper Number 230, issued May 1999*.

Undercoverage in SIPP results from missed living quarters and missed persons within sample households. It is known that undercoverage varies with age, race, and sex. Generally, undercoverage is larger for males than for females and larger for Blacks than for non-Blacks. Ratio estimation to independent age-race-sex population controls partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that persons in missed households or missed persons in interviewed households have characteristics different from those of interviewed persons in the same age-race-sex group. Further, the independent population controls used have been adjusted for undercoverage in the Census.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. The Table below shows SIPP coverage ratios for age-sex-race groups for one month-April 1996 prior to the weighting adjustment. The SIPP coverage ratios exhibit some variability from month to month, but these are a typical set of coverage ratios. Other Census Bureau household surveys [like the Current Population Survey] experience similar coverage.

**SIPP Average Coverage Ratios for Reference Month 4 of

Comparability with Other Estimates. Caution should be exercised when comparing data from this with data from other SIPP products or with data from other surveys. The comparability problems are caused by such sources as the seasonal patterns for many characteristics, different nonsampling errors, and different concepts and procedures. Refer to the *SIPP Quality Profile* for known differences with data from other sources and further discussions.

Sampling Variability. Standard errors indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The standard errors for the most part measure the variations that occurred by chance because a sample rather than the entire population was surveyed.

USES AND COMPUTATION OF STANDARD ERRORS

Confidence Intervals. The sample estimate and its standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Hypothesis Testing. Standard errors may also be used for hypothesis testing, a procedure for distinguishing between population characteristics using sample estimates. The most common types of hypotheses tested are 1) the population characteristics are identical versus 2) they are different. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

To perform the most common test, compute the difference $X_A - X_B$, where X_A and X_B are sample estimates of the characteristics of interest. A later section explains how to derive an estimate of the standard error of the difference $X_A - X_B$. Let that standard error be S_{DIFF} . If $X_A - X_B$ is between -1.6 times S_{DIFF} and $+1.6$ times S_{DIFF} , no conclusion about the characteristics is justified at the 10 percent significance level. If, on the other hand, $X_A - X_B$ is smaller than -1.6 times S_{DIFF} or larger than $+1.6$ times S_{DIFF} , the

observed difference is significant at the 10 percent level. In this event, it is commonly accepted practice to say that the characteristics are different. Of course, sometimes this conclusion will be wrong. When the characteristics are the same, there is a 10 percent chance of concluding that they are different.

Note that as more tests are performed, more erroneous significant differences will occur. For example, at the 10 percent significance level, if 100 independent hypothesis tests are performed in which there are no real differences, it is likely that about 10 erroneous differences will occur. Therefore, the significance of any single test should be interpreted cautiously.

Note Concerning Small Estimates and Small Differences. Because of the large standard errors involved, there is little chance that estimates will reveal useful information when computed on a base smaller than 200,000. Care must be taken in the interpretation of small differences since even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Calculating Standard Errors for SIPP Estimates. There are three main ways we calculate the Standard Errors for SIPP Estimates. They are as follows:

- C Replicate Weighting Methods,
- C Generalized Variance parameters (denoted as a and b),
- C Simplified tables using the a and b parameters.

The most reliable method is the Replicate Weighting Method. SIPP uses the Replicate Weighting Method to produce Generalized Variance parameters. Using the Generalized Variance parameters, we create simplified tables.

Standard Error Parameters and Tables and Their Use. Most SIPP estimates have greater standard errors than those obtained through a simple random sample because PSUs are sampled and clusters of living quarters are sampled for the SIPP in the area and new construction frames. To derive standard errors that would be applicable to a wide variety of estimates and could be prepared at a moderate cost, a number of approximations were required. Estimates with similar standard error behavior were grouped together and two parameters (denoted a and b) were developed to approximate the standard error behavior of each group of estimates. Because the actual standard error behavior was not identical for all estimates within a group, the standard errors computed from these parameters provide an indication of the order of magnitude of the standard error for any specific estimate. These a and b parameters vary by characteristic and by demographic subgroup to which the estimate applies. Table 4 provides base a and b parameters to be used for the 1996 Panel estimates. Table 10 provides parameters for calculating 1996 topical module variances.

The factors provided in Table 5 when multiplied by the base parameters of Table 4 for a given subgroup and type of estimate give the a and b parameters for that subgroup and estimate type for the specified reference period. For example, the base a and b parameters for total number of households are -0.00002495 and 2,484, respectively. For Wave 1 the factor for March 1996 is 1 since 4 rotation months of data is available. So, the a and b parameters for total household income in March 1996 based on Wave 1 are -0.00002495 and 2,484, respectively. Also for Wave 1, the factor for the first quarter of 1996 is 1.2222

since 9 rotation months of data are available (rotations 1 and 2 provide 3 rotations months each, while rotations 3 and 4 provide 2 and 1 rotation months, respectively). So the a and b parameters for total number of households in the first quarter of 1992 are -0.00003049 and 3,036, respectively for Wave 1.

The a and b parameters may be used to calculate the standard error for estimated numbers and percentages. Because the actual standard error behavior was not identical for all estimates within a group, the standard errors computed from these parameters provide an indication of the order of magnitude of the standard error for any specific estimate. Methods for using these parameter for computation of approximate standard errors are given in the following sections.

For those users who wish further simplification, we have also provided general standard errors in Tables 6 through 9. Note that these standard errors only apply when data from all four rotations are used and must be adjusted by a factor from Table 4. The standard errors resulting from this simplified approach are less accurate. Methods for using these parameters and tables for computation of standard errors are given in the following sections.

The procedures described below apply only to reference month estimates or averages of reference month estimates. Refer to the section "Use of Weights" for a more detailed discussion of the construction of estimates.

Variance stratum codes and half sample codes are included on the tapes to enable the user to compute the variances directly and more accurately by methods such as balanced repeated replications (BRR). William G. Cochran provides a list of references discussing the application of this technique. (See Sampling Techniques, 3rd Ed., New York: John Wiley and Sons, 1977, p. 321.)

Standard Errors of Estimated Numbers. The approximate standard error, s_x , of an estimated number of persons, households, families, unrelated individuals and so forth, can be obtained in two ways. Both apply when data from all four rotations are used to make the estimate. However, only the second method should be used when less than four rotations of data are available for the estimate. Note that neither method should be applied to dollar values.

The standard error may be obtained by the use of the formula

$$s_x = fs \tag{1}$$

where f is the appropriate f factor from Table 4, and s is the standard error on the estimate obtained by interpolation from Table 6 or 7. Alternatively, s_x may be approximated by the formula

$$s_x = \sqrt{ax^2 + bx} \tag{2}$$

from which the standard errors in Tables 8 and 9 were calculated. Here x is the size of the estimate and a and b are the parameters associated with the particular type of characteristic being estimated. Use of Formula 2 will provide more accurate results than the use of Formula 1.

Illustration.

Suppose SIPP estimates for Wave 1 of the 1996 Panel show that there were 1,700,000 black households with monthly household income above \$4,000. The appropriate parameters and factor from Table 4 and the appropriate general standard error from Table 6 are

$$a = 0.00018621, \quad b = 2,140, \quad f = 0.61, \quad s = 97,000.$$

Using Formula 1, the approximate standard error is

$$s_x = (0.61)(97000) = 59,170.$$

Using Formula 2, the approximate standard error is

$$\sqrt{(0.00018621)(1,700,000)^2 + (2,140)(1,700,000)} = 55,676.$$

Using the standard error based on Formula 2, the approximate 90-percent confidence interval as shown by the data is from 1,608,412 to 1,791,588. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90% of all samples.

Standard Error of a Mean. A mean is defined here to be the average quantity of some item (other than persons, families, or households) per person, family or household. For example, it could be the average monthly household income of females age 25 to 34. The standard error of a mean can be approximated by Formula 3 below. Because of the approximations used in developing Formula 3, an estimate of the standard error of the mean obtained from this formula will generally underestimate the true standard error. The formula used to estimate the standard error of a mean \bar{x} is

$$s_{\bar{x}} = \sqrt{\left(\frac{b}{y}\right)s^2} \tag{3}$$

where y is the size of the base, s^2 is the estimated population variance of the item and b is the parameter associated with the particular type of item.

The population variance s^2 may be estimated by one of two methods. In both methods, we assume x_i is the value of the item for unit "I." (Unit may be person, family, or household). To use the first method, the range of values for the item is divided into "c" intervals. The upper and lower boundaries of interval j are $Z_{j&l}$ and Z_j , respectively. Each unit is placed into one of "c" groups such that $Z_{j&l} < x_i < Z_j$.

The estimated population mean, \bar{x} , and variance, s^2 , are given by the formulas:

$$\begin{aligned}\bar{x} &= \sum_{j=1}^c p_j m_j \\ s^2 &= \sum_{j=1}^c p_j m_j^2 - \bar{x}^2,\end{aligned}\tag{4}$$

where p_j is the estimated proportion of units in group j , and $m_j = (Z_{j\&l} + Z_{j+1})/2$. The most representative value of the item in group j is assumed to be m_j . If group "c" is open-ended, or there exists no upper interval boundary, then an approximate value for m_c is

$$m_c = \frac{3}{2} Z_{c\&l}.$$

In the second method, the estimated population mean, \bar{x} , and variance, s^2 , are given by the formulas

$$\begin{aligned}\bar{x} &= \frac{\sum_{i=1}^n w_i x_i}{\sum_{i=1}^n w_i} \\ s^2 &= \frac{\sum_{i=1}^n w_i x_i^2}{\sum_{i=1}^n w_i} - \bar{x}^2,\end{aligned}\tag{5}$$

where there are n units with the item of interest and w_i is the final weight for unit "i" (note that $\sum_{i=1}^n w_i = Y$).

Illustration.

Suppose that based on Wave 1 data, the distribution of monthly cash income for persons age 25 to 34 during the month of January 1996 is given in Table 11.

Using Formula 4 and the mean monthly cash income of \$2,527 the approximate population variance, s^2 , is

$$s^2 = \left(\frac{1,371}{39,851} \right) (150)^2 + \left(\frac{1,651}{39,851} \right) (450)^2 + \dots + \left(\frac{1,493}{39,851} \right) (9,000)^2 = 3,175,058.$$

Using Formula 3 and the appropriate base b parameter from Table 4, the estimated standard error of a mean \bar{x} is

$$s_{\bar{x}} = \sqrt{\left(\frac{3,501}{39,851,000} \right) (3,175,058)} = \$16.70.$$

Standard error of an aggregate. An aggregate is defined to be the total quantity of an item summed over all the units in a group. The standard error of an aggregate can be approximated using Formula 6.

As with the estimate of the standard error of a mean, the estimate of the standard error of an aggregate will generally underestimate the true standard error. Let y be the size of the base, s^2 be the estimated population variance of the item obtained using Formula 4 or Formula 5 and b be the parameter associated with the particular type of item. The standard error of an aggregate is:

$$s_x = \sqrt{(b)(y)s^2} \quad (6)$$

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more, e.g., the percent of people employed is more reliable than the estimated number of people employed. When the numerator and denominator of the percentage have different parameters, use the parameter (and appropriate factor) of the numerator. If proportions are presented instead of percentages, note that the standard error of a proportion is equal to the standard error of the corresponding percentage divided by 100.

There are two types of percentages commonly estimated. The first is the percentage of persons, families or households sharing a particular characteristic such as the percent of persons owning their own home. The second type is the percentage of money or some similar concept held by a particular group of persons or held in a particular form. Examples are the percent of total wealth held by persons with high income and the percent of total income received by persons on welfare.

For the percentage of persons, families, or households, the approximate standard error, $s_{(x,p)}$, of the estimated percentage p can be obtained by the formula

$$s_{(x,p)} = fs \quad (7)$$

when data from all four rotations are used to estimate p .

In this formula, f is the appropriate f factor from Table 6 and s is the standard error of the estimate from Table 10 or 11.

Alternatively, it may be approximated by the formula

$$s_{(x,p)} = \sqrt{\frac{b}{x} (p)(100+p)} \quad (8)$$

from which the standard errors in Tables 10 and 11 were calculated. Here x is the size of the subclass of social units which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter associated with the characteristic in the numerator. Use of this formula will give more accurate results than use of Formula 7 above and should be used when data from less than four rotations are used to estimate p .

Illustration.

Suppose that, in the month of January 1996, 6.7 percent of the 16,812,000 persons in nonfarm households with a mean monthly household cash income of \$4,000 to \$4,999, were black. Using Formula 8 and the b parameter of 4,610 from Table 4 and a factor of 2 for the month of January 1996 from Table 5, the approximate standard error is

$$\sqrt{\frac{4,610(2)}{(16,812,000)} (6.7) (100+6.7)} = 0.59 \text{ percent.}$$

Consequently, the 90 percent confidence interval as shown by these data is from 5.74 to 7.66 percent.

For percentages of money, a more complicated formula is required. A percentage of money will usually be estimated in one of two ways. It may be the ratio of two aggregates:

$$p_I = 100 (X_A / X_N)$$

or it may be the ratio of two means with an adjustment for different bases:

$$p_I = 100 (\hat{p}_A \bar{X}_A / \bar{X}_N)$$

where x_A and x_N are aggregate money figures, \bar{x}_A and \bar{x}_N are mean money figures, and \hat{p}_A is the estimated number in group A divided by the estimated number in group N. In either case, we estimate the standard error as

$$s_I = \sqrt{\left(\frac{\hat{p}_A \bar{x}_A}{\bar{x}_N}\right)^2 \left[\left(\frac{s_p}{\hat{p}_A}\right)^2 \% \left(\frac{s_A}{\bar{x}_A}\right)^2 \% \left(\frac{s_B}{\bar{x}_N}\right)^2 \right]}, \quad (9)$$

where s_p is the standard error of \hat{p}_A , s_A is the standard error of \bar{x}_A and s_B is the standard error of \bar{x}_N . To calculate s_p , use Formula 8. The standard errors of \bar{x}_N and \bar{x}_A may be calculated using Formula 3.

It should be noted that there is frequently some correlation between \hat{p}_A , \bar{x}_N and \bar{x}_A . Depending on the magnitude and sign of the correlations, the standard error will be over or underestimated.

Illustration.

Suppose that in January 1996, 9.8% of the households own rental property, the mean value of rental property is \$72,121, the mean value of assets is \$78,734, and the corresponding standard errors are 0.31%, \$5799, and \$2867. In total there are 86,790,000 households. Then, the percent of all household assets held in rental property is

$$= 100 \left((0.098) \frac{72121}{78734} \right) = 9.0\%$$

Using Formula 9, the appropriate standard error is

$$s_I = \sqrt{\left(\frac{(0.098)(72121)}{78734}\right)^2 \left[\left(\frac{0.0031}{0.098}\right)^2 \% \left(\frac{5799}{72121}\right)^2 \% \left(\frac{2867}{78734}\right)^2 \right]}$$

= 0.008
= 0.8%

Standard Error of a Difference. The standard error of a difference between two sample estimates is approximately equal to

$$s_{(x\&y)} = \sqrt{s_x^2 \% s_y^2} \quad (10)$$

where s_x and s_y are the standard errors of the estimates x and y . The estimates can be numbers, percents, ratios, etc. The above formula assumes that the correlation coefficient between the characteristics estimated by x and y is zero. If the correlation is really positive (negative), then this assumption will tend to cause overestimates (underestimates) of the true standard error.

Illustration.

Suppose that SIPP estimates show the number of persons age 35-44 years with monthly cash income of \$4,000 to \$4,999 was 3,186,000 in the month of January 1996 and the number of persons age 25-34 years with monthly cash income of \$4,000 to \$4,999 in the same time period was 2,619,000. Then, using parameters from Table 4 and Formula 2, the standard errors of these numbers are approximately 104,787 and 95,140, respectively. The difference in sample estimates is 567,000 and using Formula 10, the approximate standard error of the difference is

$$\sqrt{(104,787)^2 + (95,140)^2} = 141,534 .$$

Suppose that it is desired to test at the 10 percent significance level whether the number of persons with monthly cash income of \$4,000 to \$4,999 was different for persons age 35-44 years than for persons age 25-34 years. To perform the test, compare the difference of 567,000 to the product $1.6 (141,534) = 226,455$. Since the difference is larger than 1.6 times the standard error of the difference, the data show that the two age groups are significantly different at the 10 percent significance level.

Standard Error of a Median. The median quantity of some item such as income for a given group of persons, families, or households is that quantity such that at least half the group have as much or more and at least half the group have as much or less. The sampling variability of an estimated median depends upon the form of the distribution of the item as well as the size of the group. To calculate standard errors on medians, the procedure described below may be used.

An approximate method for measuring the reliability of an estimated median is to determine a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.) The following procedure may be used to estimate the 68-percent confidence limits and hence the standard error of a median based on sample data.

1. Determine, using either Formula 7 or Formula 8, the standard error of an estimate of 50 percent of the group.
2. Add to and subtract from 50 percent the standard error determined in step 1.
3. Using the distribution of the item within the group, calculate the quantity of the item such that the percent of the group with more of the item is equal to the smaller percentage found in step 2. This quantity will be the upper limit for the 68-percent confidence interval. In a similar fashion, calculate the quantity of the item such that the percent of the group with more of the item is equal to the larger percentage found in step 2. This quantity will be the lower limit for the 68-percent confidence interval.
4. Divide the difference between the two quantities determined in step 3 by two to obtain the standard error of the median.

To perform step 3, it will be necessary to interpolate. Different methods of interpolation may be used. The most common are simple linear interpolation and Pareto interpolation. The appropriateness of the method depends on the form of the distribution around the median. If density is declining in the area, then we recommend Pareto interpolation. If density is fairly constant in the area, then we recommend linear interpolation. Note, however, that Pareto interpolation can never be used if the interval contains zero or negative measures of the item of interest. Interpolation is used as follows. The quantity of the item such that p percent have more of the item is

$$X_{pN} = \exp \left[\left(\frac{\ln \left(\frac{pN}{N_1} \right)}{\ln \left(\frac{N_2}{N_1} \right)} \right) \ln \left(\frac{A_2}{A_1} \right) \right] A_1 \quad (11)$$

if Pareto Interpolation is indicated and

$$X_{pN} = \left[\frac{pN \& N_1}{N_2 \& N_1} (A_2 \& A_1) \% A_1 \right] \quad (12)$$

if linear interpolation is indicated, where

- N is the size of the group,
- A_1 and A_2 are the lower and upper bounds, respectively, of the interval in which X_{pN} falls,
- N_1 and N_2 are the estimated number of group members owning more than A_1 and A_2 , respectively,
- exp refers to the exponential function and
- Ln refers to the natural logarithm function

Illustration.

To illustrate the calculations for the sampling error on a median, we return to Table 11. The median monthly income for this group is \$2,158. The size of the group is 39,851,000.

1. Using Formula 8, the standard error of 50 percent on a base of 39,851,000 is about 0.5 percentage points.
2. Following step 2, the two percentages of interest are 49.5 and 50.5.
3. By examining Table 11, we see that the percentage 49.5 falls in the income interval from 2000 to 2499. (Since 55.5% receive more than \$2,000 per month, the dollar value corresponding to 49.5 must be between \$2,000 and \$2,500). Thus, $A_1 = \$2,000$, $A_2 = \$2,500$, $N_1 = 22,106,000$, and $N_2 = 16,307,000$.

In this case, we decided to use Pareto interpolation. Therefore, the upper bound of a 68% confidence

interval for the median is

$$\$2,000 \exp \left[\left(\text{Ln} \left(\frac{(.495)(39,851,000)}{22,106,000} \right) \right) / \left(\text{Ln} \left(\frac{16,307,000}{22,106,000} \right) \right) \text{Ln} \left(\frac{2,500}{2,000} \right) \right] \cdot \$2174 .$$

Also by examining Table 11, we see that 50.5 falls in the same income interval. Thus, A_1 , A_2 , N_1 , and N_2 are the same. We also use Pareto interpolation for this case. So the lower bound of a 68% confidence interval for the median is

$$\$2,000 \exp \left[\left(\text{Ln} \left(\frac{(.505)(39,851,000)}{22,106,000} \right) \right) / \left(\text{Ln} \left(\frac{16,307,000}{22,106,000} \right) \right) \text{Ln} \left(\frac{2,500}{2,000} \right) \right] \cdot \$2142 .$$

Thus, the 68-percent confidence interval on the estimated median is from \$2142 to \$2174. An approximate standard error is

$$\frac{\$2174 \text{ \& } \$2142}{2} \cdot \$16 .$$

Standard Errors of Ratios of Means and Medians. The standard error for a ratio of means or medians is approximated by:

$$s_{\left(\frac{x}{y}\right)} \cdot \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{s_y}{y}\right)^2 \% \left(\frac{s_x}{x}\right)^2 \right]} \quad (13)$$

where x and y are the means or medians, and s_x and s_y are their associated standard errors. Formula 13 assumes that the means are not correlated. If the correlation between the population means estimated by x and y are actually positive (negative), then this procedure will tend to produce overestimates (underestimates) of the true standard error for the ratio of means.

Standard Errors Using SAS or SPSS. Standard errors and their associated variance, calculated by SAS or SPSS statistical software package, do not accurately reflect the SIPP's complex sample design. Erroneous conclusions will result if these standard errors are used directly. We provide adjustment factors by characteristics that should be used to correctly compensate for likely underestimates. The factors called DEFF available in Table 4, must be applied to SAS or SPSS generated variances. The square root of DEFF can be directly applied to similarly generated standard errors. These factors approximate design effects which adjust statistical measures for sample designs more complex than simple random sample.

Metro/NonMetro	-0.00007860	8160	3.46	1.00

Table 5: Factors to be Applied to Table 4 Base Parameters to Obtain Parameters for Various Reference Periods

# of available rotation months³	Factor
Monthly estimate	
1	4.0000
2	2.0000
3	1.3333
4	1.0000
Quarterly estimate	
6	1.8519
8	1.4074
9	1.2222
10	1.0494
11	1.0370

³ The number of available rotation months for a given estimate is the sum of the number of rotations available for each month of the estimate.

Table 6: Standard Errors of Estimated Numbers of Households, Families, or Unrelated People (Numbers in Thousands)

Size of Estimate	Standard Error	Size of Estimate	Standard Error
200	34	25,000	329
300	42	30,000	348
500	54	40,000	372
750	66	50,000	380
1,000	76	60,000	372
2,000	106	70,000	347
3,000	130	75,000	328
5,000	166	80,000	303
7,500	200	90,000	225
10,000	228	95,000	162
15,000	271	99,500	37

- To account for sample attrition, multiply the standard error of the estimate by 1.16 for estimates which include data from Wave 4 to Wave 6, 1.30 for Wave 7 to Wave 9, and 1.38 for Wave 10 to Wave 12.

Table 7: Standard Errors of Estimated Numbers of People (Numbers in Thousands)

Size of Estimate	Standard Error	Size of Estimate	Standard Error
200	40	90,000	697
300	50	100,000	714
500	64	110,000	725
750	78	120,000	732
1,000	90	130,000	735
2,000	128	140,000	734
3,000	156	150,000	729
5,000	200	160,000	719
7,500	244	170,000	705
10,000	281	180,000	686
15,000	340	190,000	661
25,000	431	200,000	631
30,000	467	210,000	594
40,000	527	220,000	549
50,000	576	230,000	494
60,000	616	240,000	425
70,000	649	250,000	332
75,000	663	260,000	185
80,000	676	264,000	43

C To account for sample attrition, multiply the standard error of the estimate by 1.16 for estimates which include data from Wave 4 to Wave 6, 1.30 for Wave 7 to Wave 9, and 1.38 for Wave 10 to Wave 12.

Table 8: Standard Errors of Estimated Percentages of Households, Families, or Unrelated People (Numbers in Thousands).

Base of Estimated Percentage (Thousands)	Estimated Percentages					
	#1 or \$99	2 or 98	5 or 95	10 or 90	25 or 75	50
200	1.69	2.38	3.71	5.10	7.36	8.50
300	1.38	1.94	3.03	4.17	6.01	6.94
500	1.07	1.51	2.34	3.23	4.66	5.38
750	0.87	1.23	1.91	2.63	3.80	4.39
1,000	0.76	1.06	1.66	2.28	3.29	3.80
2,000	0.54	0.75	1.17	1.61	2.33	2.69
3,000	0.44	0.61	0.96	1.32	1.90	2.20
5,000	0.34	0.48	0.74	1.02	1.47	1.70
7,500	0.28	0.39	0.61	0.83	1.20	1.39
10,000	0.24	0.34	0.52	0.72	1.04	1.20
15,000	0.20	0.27	0.43	0.59	0.85	0.98
25,000	0.15	0.21	0.33	0.46	0.66	0.76
30,000	0.14	0.19	0.30	0.42	0.60	0.69
40,000	0.12	0.17	0.26	0.36	0.52	0.60
50,000	0.11	0.15	0.23	0.32	0.47	0.54
60,000	0.10	0.14	0.21	0.29	0.43	0.49
70,000	0.09	0.13	0.20	0.27	0.39	0.45
75,000	0.09	0.12	0.19	0.26	0.38	0.44
80,000	0.08	0.12	0.19	0.26	0.37	0.43
90,000	0.08	0.11	0.17	0.24	0.35	0.40
95,000	0.08	0.11	0.17	0.23	0.34	0.39
99,500	0.08	0.11	0.17	0.23	0.33	0.38

C To account for sample attrition, multiply the standard error of the estimate by 1.16 for estimates which include data from Wave 4 to Wave 6, 1.30 for Wave 7 to Wave 9, and 1.38 for Wave 10 to Wave 12.

Table 9: Standard Errors of Estimated Percentages of People (Numbers in Thousands).

Base of Estimated Percentage (Thousands)	Estimated Percentages					
	#1 or \$99	2 or 98	5 or 95	10 or 90	25 or 75	50

C To account for sample attrition, multiply the standard error of the estimate by 1.16 for estimates which include data from Wave 4 to Wave 6, 1.30 for Wave 7 to Wave 9, and 1.38 for Wave 10 to Wave 12.

APPENDIX A

Wave 8 Questionnaire

1996 Panel - Wave 8 Topical Modules

ADULT WELL-BEING TOPICAL MODULE

-AW2_APT-

DO NOT READ TO RESPONDENT (ASK ONLY IF NECESSARY)

Is there more than one housing unit in this building?

- (1) Yes
- (2) No

-AW5_CNDUR-

SHOW FLASHCARD AA (READ ANSWER CATEGORIES IF NECESSARY)

Do you currently have the following items in your home, in working condition?

- (1) Yes (2) No

- (01)Washing machine
- (02)Clothes dryer
- (03)Dishwasher
- (04)Refrigerator
- (05)Stand-alone food freezer (separate from refrigerator)
- (06)Color television
- (07)Gas or electric stove (with or without oven)
- (08)Microwave oven
- (09)Videocassette recorder (VCR)
- (10)Air conditioner (central or room)
- (11)Personal computer
- (12)Cellular phone or car phone
- (13)Regular telephone

-AW6_CBLD1-

You didn't list a washing machine in your home. Is there a washing machine in your BUILDING provided for your use?

- (1) Yes
 - (2) No
-

-AW7_CBLD2-

You didn't list a dryer in your home. Is there a dryer in your BUILDING provided for your use?

- (1) Yes
 - (2) No
-

-AW8_CBLD13-

You didn't list a telephone in your home. Is there a way for people to reach you by telephone?

- (1) Yes, neighbor's phone, common phone, pay phone
 - (2) Yes, cell phone
 - (3) Yes, other device
 - (4) No, cannot be reached by telephone
-

-AW9_ROOMS-

The next set of questions are about the quality of your neighborhood, crime in your neighborhood, and the type of services available to you. First, I will ask about your home.

How many rooms are there in your home? Count the kitchen but do not count the bathrooms.

FR NOTE: Acceptable range is 1-20. Enter 20 to indicate 20 or more rooms.

_____ (Number of rooms)

-AW10_HOUSE1-

SHOW FLASHCARD BB (READ ANSWER CATEGORIES IF NECESSARY)

Are any of the following conditions present in your home?

ENTER ALL THAT APPLY AND ENTER "N" AFTER LAST ENTRY

- (1) Problem with pests such as rats, mice, roaches, or other insects
- (2) A leaking roof or ceiling
- (3) Broken window glass or windows that can't shut
- (4) Exposed electrical wires in the finished areas of your home
- (5) A toilet, hot water heater, or other plumbing that doesn't work
- (6) Holes in the walls or ceiling, or cracks wider than the edge of a dime
- (7) Holes in the floor big enough for someone to catch their foot on

-AW11_HOUSE2-

SHOW FLASHCARD CC

Now I'm going to ask you a few questions about your satisfaction with certain aspects of your housing.

Are you very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied, with the following:

FR NOTE: Very satisfied=1

Somewhat satisfied=2

Somewhat dissatisfied=3

Very dissatisfied=4

Haven't lived here long enough to know=5

- (1) The general state of repair of your home
- (2) The amount of room or space in your home
- (3) The furnishings in your home
- (4) The warmth of your home in winter
- (5) The coolness of your home in summer
- (6) The amount of privacy your home offers

-AW12_SATLV1-

SHOW FLASHCARD DD (READ ANSWER CATEGORIES IF NECESSARY)

Overall, how satisfied are you with your home?

- (1) Very satisfied
- (2) Somewhat satisfied

- (4) Very dissatisfied

-AW13_SATLV2-

Are conditions in your home undesirable enough that you would like to move?

- (1) Yes
- (2) No

-AW14_CRIME1-

The next few questions are about crime and things you have done to protect yourself from crime.

Is there any area right around your home --- that is, within a mile --- where you would be afraid to walk alone at night?

- (1) Yes
- (2) No

-AW15_CRIME2-

In the past month, have you done any of the following because you thought you might be unsafe?

- (1) Yes (2) No

- (1) Have you stayed in your home at certain times?
- (2) Have you taken someone with you or traveled with other people when going out into your neighborhood?
- (3) Have you carried anything to protect yourself?

-AW16_CRIME3-

Do you consider your neighborhood very safe from crime, somewhat safe, somewhat unsafe, or very unsafe?

- (1) Very safe
- (2) Somewhat safe
- (3) Somewhat unsafe
- (4) Very unsafe

-AW17_CRIME4-

How about your home? Do you consider it very safe from crime, somewhat safe, somewhat unsafe, or very unsafe?

- (1) Very safe
- (2) Somewhat safe
- (3) Somewhat unsafe
- (4) Very unsafe

-AW18_CRIME5-

We are interested in finding out if people do anything in particular to keep thieves or intruders out of their homes.

Do you have a dog?

- (1) Yes
- (2) No

-AW19_CRIME6-

When you got (this dog/these dogs), was it in part to keep your home safe from thieves or intruders?

- (1) Yes
- (2) No

-AW20_CRIME7-

Do you have any special safety DEVICES such as electric timers for lights, or an alarm system?

- (1) Yes
- (2) No

-AW21_SATLV3-

Overall, is the threat of crime where you live undesirable enough that you would like to move?

- (1) Yes
- (2) No

-AW22_NBRHD1-

Now I will ask some questions about general conditions in your neighborhood.

SHOW FLASHCARD EE (READ ANSWER CATEGORIES IF NECESSARY)

Do you think any of the following conditions are problems in your neighborhood?

ENTER ALL THAT APPLY AND ENTER "N" AFTER LAST ENTRY

- (1) Street noise or heavy street traffic
- (2) Streets in need of repair
- (3) Trash, litter, or garbage in the streets and lots
- (4) Rundown or abandoned houses or buildings
- (5) Industries, businesses, or other non-residential activities
- (6) Odors, smoke, or gas fumes

-AW23_NBRHD2-

SHOW FLASHCARD DD

How satisfied are you with your relationship with your neighbors?

Are you very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied?

- (1) Very satisfied
- (2) Somewhat satisfied

SHOW FLASHCARD HH (READ ANSWER CATEGORIES IF NECESSARY)

Getting enough food can also be a problem for some people. Which of these statements best describes the food eaten in your household in the last four months:

- (1) Enough of the kinds of food we want
- (2) Enough but not always the kinds of food we want to eat
- (3) Sometimes not enough to eat
- (4) Often not enough to eat

-AW60_FOOD2-

ENTER ALL THAT APPLY AND ENTER "N" AFTER LAST ENTRY

In which of the last four months did you NOT have enough to eat?

- (1) 4 mos. ago
- (2) 3 mos. ago
- (3) 2 mos. ago
- (4) last month
- (5) current month

-AW61_FOOD3-

I'm going to read you some statements that people have made about their food situation. For these statements, please tell me whether it was OFTEN TRUE, SOMETIMES TRUE, or NEVER TRUE for you in the last four months.

"The food that you bought just didn't last and you didn't have money to get more."

Was that often, sometimes or never true for you in the last four months?

- (1) Often true
- (2) Sometimes true
- (3) Never true

-AW62_FOOD4-

The next statement is: "You couldn't afford to eat balanced meals."

Was that often, sometimes or never true for you in the last four months?

- (1) Often true
- (2) Sometimes true
- (3) Never true

-AW63_FOOD5-

The next statement is: "You're not eating enough because you couldn't afford enough food."

Was that often, sometimes or never true for you in the last four months?

- (1) Often true
- (2) Sometimes true
- (3) Never true

-AW64_FOOD6-

The next questions refer to adults in the household.

In the past four months did you ever cut the size of your meals or skip meals because there wasn't enough money for food?

- (1) Yes
- (2) No

-AW65_FOOD7-

In the past four months, did you ever eat less than you felt you should because there wasn't enough money to buy food?

- (1) Yes
- (2) No

-AW66_FOOD8-

In the past four months, did you ever not eat for a whole day because there wasn't enough money for food?

- (1) Yes
 - (2) No
-

WELFARE REFORM TOPICAL MODULE

-WR01-

Which category represents the total combined income of all members of this family during the past 12 months? This includes money from jobs, net income from business, farm, or rent, pensions, dividends, interest, social security payments and any other money income received by members of this family who are 15 years of age or older.

Which category represents your total income during the past 12 months? This includes money from jobs, net income from business, farm, or rent, pensions, dividends, interest, social security payments and any other money income received by you.

(READ ALL RESPONSES)

- (1) LESS THAN \$10,000
- (2) \$10,000 TO \$20,000
- (3) \$20,000 TO \$30,000
- (4) \$30,000 TO \$40,000
- (5) \$40,000 TO \$50,000
- (6) \$50,000 or MORE

-WR02-

Our next questions are about various types of assistance for persons in need.

Between (reference month 1) 1st and today, other than the benefits you already told me about, did you receive any type of assistance because you had income that was too low to meet your needs?

Our next questions are about various types of assistance for persons in need.

Between (reference month 1) 1st and today, did you receive any type of assistance because you had income that was too low to meet your needs?

- (1) Yes
- (2) No

-WR03-

Just to be sure, this assistance could have come in any form, such as help getting a job, help improving your skills, help with child care, food assistance, etc. Did you get anything like that?

- (1) Yes
- (2) No

-WR04-

Our next questions are about various types of assistance for persons in need, such as help from a government agency or a charity.

Between (reference month 1) 1st and today, did you receive any of the following types of assistance because you had income that was too low to meet your needs:

Any job or skills training or Job Club or other job search programs designed to help you find a job?

- (1) Yes
- (2) No

-WR05-

How about any other educational or vocational programs?

- (1) Yes
- (2) No

-WR06-

Did a welfare or social service agency give any of your employers money to cover all or part of your hiring, training, or wages?

Did a welfare or social service agency pay your EMPLOYING agency part of the cost of your hiring, training, or wages?

Did the government give your employer any money to cover all or part of your hiring, training, or wages?

- (1) Yes
- (2) No

-WR07-

Since (reference month 1) 1st did you receive any gas vouchers, bus passes, help registering, repairing or insuring a car, or any other transportation assistance for low income people?

- (1) Yes
- (2) No

-WR08-

Between (reference month 1)1st and today, did you receive any of the following types of assistance because you had income that was too low to meet your needs:

Child care services or support so you can go to work or school or training?

- (1) Yes
- (2) No

-WR09-

Between (reference month 1) 1st and today, did you receive any food assistance?

- (1) Yes
- (2) No

-WR10-

Since (reference month 1) 1st, did you receive any clothing assistance or clothes, such as assistance to buy uniforms, work clothes, or school or winter clothes for children?

- (1) Yes
- (2) No

-WR11-

At any time since (reference month 1) 1st, did you receive any assistance to help pay for housing, other than energy assistance?

At any time since (reference month 1) 1st, did you receive any assistance to help pay for housing?

- (1) Yes
- (2) No

-WR12-

Since (reference month 1) 1st, did you receive any short-term cash assistance to tide you over while you needed it or to help you stay off welfare?

- (1) Yes
- (2) No

-WR13-

Even though you didn't receive any child support, since (reference month 1) 1st, did you talk to or work with anyone from the child support or welfare office to try to obtain child support?

Since (reference month 1) 1st, did you talk to or work with anyone from the child support or welfare office to try to obtain child support?

- (1) Yes
- (2) No

-WR14-

Since (reference month 1) 1st did you receive any other assistance or benefits because you had income that was too low to meet your needs?

- (1) Yes
- (2) No

What was that?

-WR15-

To get any of the work you did since (reference month 1) 1st, did get any help from a government or social service agency or from a case worker or social worker?

To get the job(s) with (read above for name or names of employers), did you get any help from a government or social service agency or from a case worker or social worker?

To get the job with (read above for name or names of employers), did you get any help from a government or social service agency or from a case worker or social worker?

- (1) Yes
- (2) No

-WR16-

Which of the following activities have you done since (reference month 1) 1st either because the welfare or social service office required it for you to receive assistance or because you chose to do it:

Reported your income and any family or address changes on a regular basis?

(1) Yes

(2) No

Worked in an unpaid job, sometimes called community service or workfare?

(1) Yes

(2) No

Established the paternity of a child?

(1) Yes

(2) No

Had drug testing because the welfare or social service office required it?

(1) Yes

(2) No

Lived with a responsible adult?

(1) Yes

(2) No

Is there anything else you were required to do since (reference month 1) 1st?

(1) Yes

(2) No

What was that?

-WR17-

You said that you worked in an unpaid job or did community service or workfare since (reference month 1) 1st. Did you do that because the welfare or social service office required it or because you chose to do it, or for BOTH reasons?

(1) Required to do workfare

(2) Chose to do workfare

(3) Both required and chose

-WR18-

You said that you looked for work at some time since (reference month 1) 1st. Did you look for work because the welfare or social service office required it or because you chose to do it or for BOTH reasons?

- (1) Required to look for work
- (2) Chose to look for work
- (3) Both required and chose

-WR19-

You said that you had a job or did some kind of work since (reference month 1) 1st. Did you work because the welfare or social service office required it or because you chose to do it, or for BOTH reasons?

- (1) Required to work
- (2) Chose to work
- (3) Both required and chose

-WR20-

You said that you attended school and training at some time since (reference month 1) 1st. Did you do that because the welfare or social service office required it or because you chose to do it, or for BOTH reasons?

- (1) Required to attend school / training
- (2) Chose to attend school/ training
- (3) Both required and chose

-WR21-

Earlier you said that since (reference month 1) 1st, you were not covered by health insurance. Did you go to a doctor, nurse, or another health care provider at all while not insured?

- (1) Yes
- (2) No

-WR22-

You said you were getting some kind of education or vocational training in the past 4 months. Was your training or education at any of the following locations:

(READ ALL RESPONSES)

(1) Yes (2) No

- (1) A school, including a Community College?
- (2) A public office or building, like a welfare, Social Service, or unemployment office or any other government office?
- (3) A private company office?
- (4) Any other location? What would that other location be?

-WR23-

You said you received help finding the job with (read above for name or names of employers). Which of the following kinds of assistance did you receive:

(READ ALL RESPONSES)

(1) Yes (2) No

- (1) Not eligible - income or other resources too high to qualify
- (2) Not eligible - not eligible due to penalty from previous program participation (sanctioned)
- (3) Not eligible - didn't meet health or disability requirement
- (4) Not eligible - immigration status
- (5) Not eligible - no reason specified, or some other reason given
- (6) Did not provide all the information requested
- (7) Non-cooperation with work requirements
- (8) Non-cooperation with child support requirements
- (9) Not residing in an adult-supervised household
- (10) Failed substance abuse requirements (testing or any other related)
- (11) Had already received maximum assistance (time and \$ limit)
- (12) Lack of program funding
- (13) Other

What was the other reason?

-WR115_11-

For your Child care assistance, when are the benefits going to be cut off, or has it already happened?

- (1) Already happened
- (2) Within the next month
- (3) Within the next 3 months
- (4) Within the next 6 months
- (5) Within the next year
- (6) Later than a year
- (7) Not going to happen

-WR116_11-

What reasons were given for your Child care assistance benefits being cut off? Anything else?

-WR117-

We've just completed a series of questions about different kinds of assistance. Many of these questions have never been asked in a survey before, so I have a few questions to ask you to see how well the new questions are working.

First, did any of the questions use any words that you didn't recognize, or didn't know what they meant?

(1) Yes

(2) No

What words were not clear?

-WR118-

Were there any questions that seemed strange to you, or that just didn't fit your situation, or did they all seem pretty reasonable?

(1) Yes, some question(s) seemed strange/didn't fit

(2) No, all questions were pretty reasonable

Which questions?

-WR119-

Did you have any difficulty answering any of the questions about the different kinds of assistance?

(1) Yes

(2) No

Which questions? (What were those questions about?)

-WR120-

I recorded earlier that you did NOT/were unsure if you received any transportation assistance. Just to be sure, since (reference month 1) 1st, did you receive any money for gas, or cab or bus rides from Medicaid, or anything else that might be a type of transportation assistance?

(1) Yes

(2) No

-WR121-

What did you receive? Anything else?

MARK ALL THAT APPLY ENTER "N" AFTER LAST ENTRY

- (1) Gas vouchers
- (2) Bus or subway tokens or passes
- (3) Help registering, repairing, or insuring a car
- (4) Rides to a doctor's office or medical appointment
- (5) Other

What was that?

-WR122-

I recorded earlier that you did NOT/were unsure if you received any child care assistance. Just to make sure we're not missing anything - since (reference month 1) 1st, did you receive any money or vouchers to pay for child care, or a fee reduction, or anything else that might be considered assistance to help pay for the costs of child care?

- (1) Yes
 - (2) No
-

-WR123-

What did you receive?

MARK ALL THAT APPLY ENTER "N" AFTER LAST ENTRY

- (1) Money or vouchers to help pay for child care
- (2) Free child care
- (3) Reduced price child care
- (4) Other

What was that?

-WR124-

Did a government social service agency provide that assistance?

- (1) Yes
- (2) No

-WR125-

You said that you did NOT/were unsure if you received any food assistance.

Just to be sure, since (reference month 1) 1st, did you receive any money or vouchers to buy food, any bags of groceries, any meals from a shelter or a soup kitchen, or anything else that might be a type of food assistance?

- (1) Yes
- (2) No

-WR126-

What kind of food assistance did you receive? Anything else?

MARK ALL THAT APPLY ENTER "N" AFTER LAST ENTRY

- (1) Money, vouchers, or certificates to buy groceries or food
- (2) Bags of groceries or packaged foods
- (3) Meals from a shelter, soup kitchen, or charity
- (4) Other

What was that?

-WR127-

Is there anything you haven't mentioned yet that you think might be some kind of assistance that you received from a government or social service agency since (reference month 1) 1st?

- (1) Yes
- (2) No

What is that?

APPENDIX B

Working Papers

This appendix provides a list of SIPP Working Papers. These papers are available on the Census Bureau's Internet site <http://www.census.gov>

Old	New	
(8401)	1	(Update No. 1, Revised 12/85) "An Overview of the Survey of Income and Program Participation," D. NELSON, D. B. MCMILLEN, and D. KASPRZYK (Census Bureau)
(8501)	2	"The Survey of Income and Program Participation: Uses and Applications," K. S. SHORT (Census Bureau)
(8502)	3	"Applications of a Matched File Linking the Bureau of the Census Survey of Income and Program Participation and Economic Data," S. HABER (The George Washington University)
(8503)	4	"Using the Survey of Income and Program Participation for Research on the Older Population," D. B. MCMILLEN, C. M. TAEUBER, and J. MARKS (Census Bureau)
(8504)	5	"Summary of the Content of the 1984 Panel of the Survey of Income and Program Participation," D. T. FRANKEL (Census Bureau)
(8505)	6	"Enhancing Data from the Survey of Income and Program Participation with Data from Economic Censuses and Surveys," D. K. SATER (Census Bureau)
(8506)	7	"Methodologies for Imputing Longitudinal Survey Items," V. J. HUGGINS, L. WEIDMAN, and M. E. SAMUHEL (Census Bureau)
(8507)	8	"New Household Survey and the CPS: A Look at Labor Force Differences," P. M. RYSCAVAGE (Census Bureau) and J. E. BREGGER (Bureau of Labor Statistics)
(8601)	9	"Some Aspects of SIPP," compiled and edited by R. A. HERRIOT and D. KASPRZYK (Census Bureau)
(8602)	10	"Nonsampling Error Issues in the SIPP," G. KALTON (University of Michigan), D. B. MCMILLEN, and D. KASPRZYK (Census Bureau)
(8603)	11	"An Investigation of Model-Based Imputation Procedures Using Data from the Income Survey Development Program," V. J. HUGGINS and L. WEIDMAN (Census Bureau)
(8604)	12	"Food Stamp Participation: A Comparison of SIPP with Administrative Records," S. CARLSON and R. DALRYMPLE (Food and Nutrition Service)
(8605)	13	"SIPP Longitudinal Household Estimation for the Proposed Longitudinal Definition," L. R. ERNST (Census Bureau)
(8606)	14	"A Comparison of Seven Imputation Procedures for the 1979 Panel of the Income Survey Development Program," V. J. HUGGINS (Census Bureau)

APPENDIX B - WORKING PAPERS

Old	New	
(8607)	15	"An Investigation of the Imputation of Monthly Earnings for the Survey of Income and Program Participation Using Regression Models," V. J. HUGGINS and L. WEIDMAN (Census Bureau)
(8608)	16	"Evaluation of Training Materials and Methods for the Survey of Income and Program Participation," M. HOLT (Survey Research Consultant)
(8609)	17	"Patterns of Household Composition and Family Status Change," C. F. CITRO (ASA/Census Research Fellow), and H. W. WATTS (Department of Economics, Columbia University)
(8610)	18	"Composite Estimation for SIPP:A Preliminary Report," R. P. CHAKRABARTY (Census Bureau)
(8611)	19	"Longitudinal Household Concepts in SIPP: Preliminary Results," C. F. CITRO (ASA/Census Research Fellow), D. J. HERNANDEZ, and R. A. HERRIOT (Census Bureau)
(8612)	20	"Following Children in the Survey of Income and Program Participation," E. K. MCARTHUR, and K. S. SHORT (Census Bureau)
(8613)	21	"SIPP Labor Force Transitions: Problems and Promises," P. RYSCAV AGE and K. S. SHORT (Census Bureau)
(8614)	22	"Augmenting Data Reported in the Survey of Income and Program Participation with Administrative Record Data--A Brief Discussion," D. K. SATER (Census Bureau)
(8701)	23	"Tracking Persons Over Time," A. C. JEAN and E. K. MCARTHUR (Census Bureau)
(8702)	24	"Preliminary Data from the SIPP 1983-84 Longitudinal Research File," J. F. CODER, D. BURKHEAD, A. FELDMAN-HARKINS, and J. MCNEIL (Census Bureau)
(8703)	25	"Work Experience Data from SIPP," P. RYSCAVAGE and A. FELDMAN-HARKINS (Census Bureau)
(8704)	26	"The Treatment of Person-Wave Nonresponse in Longitudinal Surveys," G. KALTON, J. LEPKOWSKI, S. HEERINGA, TING-KWONG LIN, and M. E. MILLER (Survey Research Center, University of Michigan)
(8705)	27	"SIPP: Filling Data Gaps on the Poverty and Social Welfare Fronts," P. RYSCAVAGE (Census Bureau)
(8706)	28	"Response Errors in Labor Surveys: Comparisons of Self and Proxy," D. HILL (University of Michigan)
(8707)	29	"Differences Between SIPP and Food and Nutrition Service Program Data on Child Nutrition and WIC Program Participation," L. KU and R. DALRYMPLE (Food and Nutrition Service, U.S. Department of Agriculture)
(8708)	30	"Quality Profile for the Survey of Income and Program Participation," K. KING, R. PETRONI, and R. SINGH (Census Bureau)

SIPP FILES

Old	New	
(8709)	31	"Survey of Income and Program Participation (SIPP) Sample Loss and the Efforts to Reduce It," D. NELSON, C. BOWIE, and A. WALKER (Census Bureau)
(8710)	32	"The Impact of Imputation Procedures on Distributional Characteristics of the Low Income Population," P. DOYLE (Mathematica Policy Research), and R. DALRYMPLE (Food and Nutrition Service, U.S. Department of Agriculture)
(8711)	33	"Job Tenure, Lifetime Work Interruptions and Wage Differentials," J. MCNEIL, E. LAMAS (Census Bureau), and S. HABER (The George Washington University)
(8712)	34	"Measuring the Bias in Gross Flows in the Presence of Auto-Correlated Response Errors," D. HUBBLE (Census Bureau), and D. JUDKINS (Westat, Inc.)
(8713)	35	"Investigation of Possible Causes of Transition Patterns from SIPP," L. WEIDMAN (Census Bureau)
(8714)	36	"Household and Income Sources: Monthly Averages for 1984," J. MOORMAN (Census Bureau)
(8715)	37	"Creating SIPP Longitudinal Files Using OSIRIS IV," M. SERVAIS (University of Michigan)
(8716)	38	"Transition In and Out of Poverty: New Data from the Survey of Income and Program Participation," P. RUGGLES (The Urban Institute), and R. WILLIAMS (Congressional Budget Office)
(8717)	39	"On Their Own: The Self-Employed and Others in Private Business," S. HABER (The George Washington University), E. LAMAS (Census Bureau), and J. LICHTENSTEIN (U.S. Small Business Administration)
(8718)	40	"Factors Associated with Household Net Worth," E. LAMAS and J. MCNEIL (Census Bureau)
(8719)	41	"Exploring Changes in Health Care Coverage Using the SIPP Longitudinal Research File," D. BURKHEAD and A. FELDMAN and HARKINS (Census Bureau)
(8720)	42	"The Analysis of Geographical Mobility and Life Events with the SIPP," D. DAHMANN and E. MCARTHUR (Census Bureau)
(8721)	43	"A Review of the Use of Administrative Records in the Survey of Income and Program Participation," C. BOWIE and D. KASPRZYK (Census Bureau)
(8722)	44	"Survey of Income and Program Participation Update," D. KASPRZYK (Census Bureau)
(8723)	45	"Measuring Poverty with the SIPP and the CPS," R. WILLIAMS (Congressional Budget Office)
(8724)	46	"The Statistical Invisible Minority Aged," C. TAEUBER (Census Bureau), and E. ATTAH (Atlanta University)

APPENDIX B - WORKING PAPERS

Old	New	
(8725)	47	"An Analysis of the SIPP Asset and Liability Feedback Experiment," E. LAMAS and J. MCNEIL (Census Bureau)
(8801)	48	"The Impact of the Unit of Analysis on Measures of Serial Multiple Program Participation," P. DOYLE and S. K. LONG (Mathematica Policy Research, Inc.)
(8802)	49	"Short-Term Fluctuations in Income and Their Impacts on the Characteristics of the Low-Income Population: New Data from the Survey of Income and Program Participation," P. RUGGLES (The Urban Institute)
(8803)	50	"Residential Mobility of One-Person Households," J. WITTE and H. LAHMANN (German Institute for Economic Research)
(8804)	51	"Year-Apart Estimates of Household Net Worth from the Survey of Income and Program Participation," J. MCNEIL and E. LAMAS (Census Bureau)
(8805)	52	"Measuring Poverty and Crises: A Comparison of Annual and Subannual Accounting Periods Using the Survey of Income and Program Participation," M. DAVID and J. FITZGERALD (Institute for Research on Poverty)
(8806)	53	"Using Administrative Record Data to Evaluate the Quality of Survey Estimates," J. MOORE and K. MARQUIS (Census Bureau)
(8807)	54	"The Wealth of the Aged and Nonaged, 1984," D. RADNER (Social Security Administration)
(8808)	55	"Examining the Dynamics of Health Insurance Loss: A Tale of Two Cohorts, A. C. MONHEIT and C. L. SCHUR (National Center for Health Services Research)
(8809)	56	"The Dynamics of Medicaid Enrollment," P. FARLEY-SHORT, J. A. CANTOR and A. C. MONHEIT (National Center for Health Services Research)
(8810)	57	"The Discouraged Worker Effect: A Reappraisal Using Spell Duration Data, A. MARTINI (University of Wisconsin-Madison)
(8811)	58	"Income as a Proxy for the Economic Status of the Elderly," D. J. CHOLLET and R. B. FRIEDLAND (Employee Benefit Research Institute)
(8812)	59	"The SIPP: Data from the Social Security Administration's 1987 Annual Statistical Supplement."
(8813)	60	"Participation in Industrial Training Programs," S. HABER (The George Washington University)
(8814)	61	"A Methodological Study Using Administrative Records: The Special Frames Study of the Income Survey Development Program," W. J. LOGAN (Social Security Administration), D. KASPRZYK and R. CAVANAUGH (Census Bureau)
(8815)	62	"The Effect of Income Taxation on Labor Supply When Deductions are Endogenous, R. K. TRIEST (The Johns Hopkins University)

SIPP FILES

Old	New	
(8816)	63	"A Comparison of Gross Changes in Labor Force Status from SIPP and CPS," P. RYSCAVAGE and A. FELDMAN-HARKINS (Census Bureau)
(8817)	64	"How are the Elderly Housed? New Data from the 1984 Survey of Income and Program Participation," A. GOLDSTEIN (Census Bureau)
(8818)	65	"Welfare Recipient as Observed in the SIPP," J. CODER (Census Bureau) and P. RUGGLES (The Urban Institute)
(8819)	66	"Reservation Wages and Subsequent Acceptance Wages of Unemployed Persons, P. RYSCAVAGE (Census Bureau)
(8820)	67	"Selected References from the Income Survey Development Program (ISDP) and Survey of Income and Program Participation (SIPP)."
(8821)	68	"Training, Wage Growth, Firm Size," S. HABER (The George Washington University) and E. LAMAS (Census Bureau)
(8822)	69	"Defining and Measuring Nonmetro Poverty: Results from the Survey of Income and Program Participation," R. HOPPE (Economic Research Service, U.S. Department of Agriculture)
(8823)	70	"Nonresponse Adjustment Methods for Demographic Surveys at the U.S. Bureau of the Census," R. SINGH and R. PETRONI (Census Bureau)
(8824)	71	"Testing Telephone Interviewing in the Survey of Income and Program Participation and Some Early Results," S. DURANT and P. GBUR (Census Bureau)
(8825)	72	"Excluding Sample that Misses Some Interviews from SIPP Longitudinal Estimates," L. R. ERNST and D. GILLMAN (Census Bureau)
(8826)	73	"The Employment of Mothers and the Prevention of Poverty," M. HILL (University of Michigan) and H. HARTMANN (Rutgers University)
(8827)	74	"Using Administrative Record Data to Describe SIPP Response Errors," J. MOORE and K. MARQUIS (Census Bureau)
(8828)	75	"A Look at Welfare Dependency Using the 1984 SIPP Panel File," J. CODER, D. BURKHEAD, and A. FELDMAN-HARKINS (Census Bureau)
(8829)	76	"Census Bureau Microdata: Providing Useful Research Data While Protecting the Anonymity of Respondents," G. GATES (Census Bureau)
(8830)	77	"The Survey of Income and Program Participation: An Overview and Discussion of Research Issues," D. KASPRZYK (Census Bureau)
(8901)	78	"Quality of SIPP Estimates," R. P. SINGH, L. WEIDMAN, and G. SHAPIRO (Census Bureau)
(8902)	79	"Two Notes on Sampling Variance Estimates from the 1984 SIPP Public-Use Files," B. BYE and S. J. GALLICCHIO (Social Security Administration)

APPENDIX B - WORKING PAPERS

Old	New	
(8903)	80	"Longitudinal vs. Retrospective Measures of Work Experience," P. RYSCAVAGE and J. CODER (Census Bureau)
(8904)	81	"Analyzing the Characteristics of Blacks: A Comparison of Data from SIPP and CPS," R. FARLEY and L. J. NEIDERT (University of Michigan)

SIPP DATA REVIEW

SIPP 1996 Wave 8: Adult Well Being Topical Module

INTRODUCTION

This report provides a review of the data quality of the wave 8 Adult Well Being topical module from the 1996 panel of the Survey of Income and Program Participation (SIPP). The questions cover several topical areas having to do with general living conditions. Similar questions were asked in previous SIPP surveys. The full module on “extended measures of well-being” was administered in the 1991 and 1992 panels, while a subset of “basic needs” questions were administered in the 1993 panel. The following shows the coverage areas for each of the panels.

Topics Covered in Topical Modules on Well Being and Basic Needs in the 1991 to 1996 Panels of the Survey of Income and Program Participation				
	Panel			
TOPIC	1991	1992	1993	1996
Consumer durables	U	U		U
Housing conditions	U	U		U
Crime	U	U		U
Neighborhood conditions	U	U		U
Community Services	U	U		U
Ability to meet expenses	U	U	U	U
Help when in need	U	U	U	U
Food adequacy	U	U	U	U
Income sufficiency			U	

To facilitate analysis and discussion below, the 1996 panel variables will be treated in two parts. The first consists of variables that have counter parts only in the 1991 and 1992 panels. For brevity, these will be called “living conditions” variables. Beware that this terminology is not used anywhere else but in this report. The second part, consisting of variables which also have counterparts in 1993, will be called by the same term used to describe the 1993 topical module -- “basic needs.” Table 1 lists the variables in these two parts, divided into topical sections.

When they were asked, the questions on living conditions and basic needs remained identical across the first three panels (1991-1993) with the exception of food adequacy questions, which were revised slightly

in 1993. In the 1996 panel, questions sometimes differed from previous administrations of similar questions, in part due to the shift to a computer-based (CAPI) instrument.

The 1996 wave 8 topical module was administered during the fall (August through November) of 1998. Most questions referred to conditions existing at the time of interview. Questions on ability to meet expenses referenced the prior 12 months, questions on food adequacy reference the prior 4 months.

The purpose of this report is to examine the data in the context of sample attrition, item and module nonresponse, and to assess the overall reasonableness of the data. For comparison purposes, responses to other surveys are examined. Comparison is also made to responses to questions administered in Wave 6 of the 1991 panel, Wave 3 of the 1992 panel, and Wave 9 of the 1993 panel.

SAMPLE ATTRITION

The 1996 Wave 8 Basic Needs data file is a rectangular file consisting of records for each individual in sample. The data were collected from only one respondent per household -- almost always the household reference person or his/her proxy. Therefore, the content of the topical module record is identical for each person in a household.

The number of households eligible for interviewing in Wave 8 was 35,018. By this wave 2,265 households were not in sample, that is, they were a part of the original sample, but by this point in time had missed multiple interviews and were no longer interviewed. In addition, there were 3,214 cases which were eligible for interview, but could not be reached during Wave 8. The interviewed sample, therefore, was 29,539. Of these 27,300, or about 93 percent, gave responses to the topical module, leaving 2,239 who provided no topical module information.¹

¹ The number of respondents with no TM responses was determined by checking that the allocation flags were set for all items asked of the complete household universe. That is:

```
AADWASH gt '0' and AADDRYR gt '0' and AADDISH gt '0' and  
AADREFR gt '0' and AADFRZ gt '0' and AADSTOV gt '0' and  
AADMICR gt '0' and AADVCR gt '0' and AADAIR gt '0' and

AAHLPFM gt '0' and AAHLPRF gt '0' and AAHLPAG gt '0' and  
AAFOOD1 gt '0'
```

Imputation was used to fill in information on non-respondents. Thus the final data file contains information on all 29,539 households in sample. Please note that imputations were not carried out on the 1991 to 1993 topical module files. Analyses of the data in those files are not strictly comparable to analyses of the 1996 panel files, except when steps are taken to account for different handling of missing data and non-response.

<i>Response category</i>	<i>Number of cases</i>
All households	35,018
Not in sample	2,265
Wave non-interview	3,214
Net sample	29,539
Topical module non-interview	2,239
Topical module respondents	27,300

Table 2 shows the pattern of module nonresponse for several basic demographic factors. Tests for significant patterns of loss in the sample data from the prior wave are made using a chi-square test that has been adjusted for sample design. (The simple adjustment is to divide the calculated chi-square value by 3.) Using this method we find significant differences between respondents and nonrespondents by sex and education level. Males were less likely to be respondents. Nonresponding households were more often headed by people with exactly a high school education. Differences by age and race/ethnicity were not significant.

ITEM AND MODULE NONRESPONSE

In addition to the loss of data caused by noninterviewed households and people, information is also lost because of item nonresponse.

Part 1: Living conditions.

Table 3 shows nonresponse rates for each of the “living conditions” items in the module. For appropriate items, comparative nonresponse rates from the 1991 and 1992 panels are also given. The first thing to notice is that the overall response rate to the items in the module in the 1996 panel was lower than in 1991 and 1992. In the previous years, around 95 percent of eligible respondents provided valid answers to the initial questions in the module (questions on possession of consumer durables). In the 1996 panel the percentage providing answers to these questions was just over 91 percent. The largest part of the overall non-response for most questions was topical module non-response. Topical module non-response was also the largest part of the difference between 1996 and earlier years.

There are several potential reasons that topical module non-response was higher in the 1996 panel. First, the interview took place late in the panel, meaning that the cumulative effect of attrition had boosted the number of households that had ceased responding. Many of these households were still considered “in sample” while attempts to follow-up and recapture them for the survey were being conducted. Also, in order to minimize attrition, stricter rules on dropping households from sample were adopted in 1996.

This would increase the number of non-responding households in sample. Finally, part of the difference in topical module non-response may have to do with how topical module non-response was defined in each panel. In all panels, respondents with no answers to any topical module questions were considered topical module non-respondents, but decisions on how to handle “don’t know” and “refusal” answers differed, and may affect these numbers. Since the partition of non-response between topical module non-response and item non-response varied from one panel to another, it is not wise to place too much weight on the comparison of item non-response for individual questions across surveys.

Consumer durables

For the most part, item non-response levels for living conditions questions were fairly low, but somewhat higher than for comparable questions administered in the Extended Measures of Well Being topical modules in Wave 6 of the 1991 Panel and in Wave 3 of the 1992 Panel.

The lowest level of non-response among the “living conditions” variables was associated with the initial questions on consumer durables (washing machine, dryer, dishwasher, etc.). The item non-response to these questions (D, R, or Blank) was in the range of 1 to 1.5 percent. This was around 0.5 percent higher than observed in 1991 and 1992.

Housing conditions

The next few questions on housing quality (warmth, coolness, privacy, etc.), had lower levels of item non-response in the 1996 panel than earlier. One reason might be that a change in answer categories from a rating scale (1 to 10) in 1991 and 1992, to a set of four answers (“very satisfied”, “somewhat satisfied”, “somewhat dissatisfied”, “very dissatisfied”) in the 1996 panel. Questions in other sections of the topical module that made this switch in answer categories also had equal or lower item non-response rates in the 1996 panel.

Crime

The questions on housing, crime and fear of crime all had item non-response rates of around 2.5 percent. Some of the crime-related questions had no counterparts in earlier surveys, but those that had slightly lower item non-response in the earlier panels.

Neighborhood conditions

Questions on neighborhood conditions generally had good response rates, with the exception of the question on satisfaction with neighbors, where item non-response was 3.95 percent in the 1996 panel. It was also high in earlier panels. Some people may be reluctant to rate their neighbors, or may not know their neighbors.

Community services

Community services questions had variable response rates. Almost 10 percent of respondents could not provide a rating of local public schools. This is somewhat puzzling, because in earlier panels, questions on schools didn’t generate especially high non-response, and the questions were very similar.

The 1996 panel question was: “How satisfied are you with the local public schools in your neighborhood?”

The 1991-1992 question was: “On a scale of 1 to 10, where 10 is the best and 1 is worst, how would you rate the following services or conditions in your neighborhood?
... Quality of education in local schools.”

We have already seen that elsewhere, the 1 to 10 rating system produced poor results, so we would expect to have higher, not lower, nonresponse in the earlier panels. The only explanation that comes to mind is that failing to specify an interest in “quality of education” led more respondents to be unsure of their replies in the 1996 panel. Another possible explanation would be that the increasingly public debate on educational policy, which focuses on school quality as a policy concern, has led people to move away from automatically rating their schools positively.

Another question with very high non-response rates was EAPDIFF, “Would you or the other adults in the household prefer a different school for any child in this home?” This question was characterized by a high number of “blank” answers (although it did not have a high number of “don’t know” or “refusal” responses).

Part 2: Basic Needs.

Table 4 shows response rates for questions on basic needs. Here, contrast can be made with the 1993 topical module, as well as the 1991 and 1992 ones. The overall response rates for the first few questions in this section are close to what they were for the opening questions of the living conditions section. The 1993 wave 9 topical module stands out as having an especially low response rate -- in some cases less than 90 percent. This reinforces the idea that a large contributing factor in non-response is the age of the panel.

Ability to meet basic needs

The questions on ability to meet needs generally had fairly high response rates, at least by comparison to previous panels. There was a bit lower non-response in 1991 and 1992, but generally higher non-response in 1993.

Due to the skip pattern in the CAPI instrument, the universe for the items EABEVCT (evicted) and EABCUT (utilities cut off) in the 1996 panel consisted of people who had affirmative answers to the prior questions EABRENT (didn’t pay rent) or EABGAS (didn’t pay gas or electric bill). In prior years, all respondents were asked the questions. However, in Table 4, only responses of those who answered “yes” to the previous questions are listed for 1991 to 1993, to facilitate comparison with the 1996 panel. Because topical module non-respondents could not have answered these previous questions, there was no topical module non-response shown for these questions in 1991 to 1993. However, due to item imputation, there were a few topical module non-respondents listed as having answered “yes” to previous questions in the 1996 panel.

Although nominal response rates were low for a few of the questions with limited universes (including EABEVCT, EABCUT and the questions on who helped), the small number of total responses to these questions makes it hard to make any judgement on their quality.

Help when in need

The three questions on help when in need had lower overall response than many other questions, both in the 1996 panel and earlier. The 1996 panel response rate was generally higher than observed in the previous years' surveys.

Food sufficiency and food security

The questions on food sufficiency produced non-response levels that were close to that observed with other questions in the module. The questions on months without food had high non-response, but there were relatively few individuals answering this question.

The questions on food security (EAFLAST through EAFDAY) are new with the topical module in the 1996 panel. They are a subset of the questions on food security asked in a supplement on this subject in the Current Population Survey. They seem to have performed at least as well as most other questions in the supplement, with overall response rates of 90 percent or higher.

REASONABLENESS OF DATA: COMPARISON WITH PAST SIPP PANELS

Overall, the data collected in the 1996 panel wave 8 Adult Well-Being topical module appear to be well within the range that would be expected, based on the experience of previous panels of the SIPP. There are minor discrepancies here and there, due in large part to changes in question wording or skip patterns. Analysts who wish to make comparisons across waves should take note of the exact wording of questions in each panel. A discussion of similarities and differences in each section of the instrument is set out below.

Part 1: Living conditions.

Table 5 shows the weighted percentage of households with various types of living conditions. Since the period from 1993 to 1998 was one of relative prosperity and economic growth in the United States, one would expect to find most living conditions improving, even if only moderately so.

Consumer durables

There was very good agreement between the 1996 panel SIPP survey (collected in fall 1998) and previous years in the section on consumer durables. According to these results, there was an increase in the rate of ownership of dishwashers, televisions, VCR's, microwaves, air conditioners and computers. Ownership of other items remained stable, and none declined.

Housing conditions

In the 1996 panel, the distribution of the number of rooms is very close to that observed in previous years, with a slight shift upward, as might be expected. The questions on specific housing problems generated a lower rate of cited problems in 1996 than earlier panels. Part of that can be explained by better conditions, but some may not. For example, the percentage with broken windows fell from over 7 percent to just around 4 percent. It is possible that question wording was responsible for this type of change -- the descriptions of specific problems, and the order in which they were read, were changed in 1996. It is also possible that better material conditions made small problems seem less worth mentioning.

The questions on satisfaction with various aspects of housing were changed from the 1991-1992 panel to the 1996 panel. In the earlier panels, respondents were asked to rate conditions on a scale of 1 to 10, while in the 1996 panel they were asked a four-point satisfaction scale. To make comparisons, an ad-hoc scheme was used to recode the previous answers. Specifically, people who rated something a 9 or 10 were recoded as "very satisfied," people who rated something 6 to 8 were "somewhat satisfied," people who rated something 3 to 5 were "somewhat dissatisfied," and people who rated something 1 or 2 were "very dissatisfied." Direct comparisons of the 1996 and previous panels, therefore, is not possible. However, it is possible to examine whether a particular question generated high ratings relative to other questions in the same survey.

Of the questions on housing comfort, warmth and overall satisfaction got the highest ratings in all three panels. In 1991 and 1992, the next highest category was housing space, while in 1996 it was coolness of the home. This change may be due to the increased ownership of air conditioners, or, more likely, a change to the instrument that allowed those with no knowledge of the answer to explicitly say so.

The last question in the section is whether housing conditions are undesirable enough that the respondent would want to move. A lower percentage stated that they felt this badly in 1996 (1996 panel) than in 1991 and 1992. Part of the reason may be that respondents who responded they were "very satisfied" with their housing conditions were assumed in the 1996 panel not to want to move, while they were asked directly in the earlier panels.

Crime

Answers to questions on crime produced highly variable results, when comparisons are made to answers in 1991 and 1992. Three of the 1996 panel questions did not have exact counterparts in earlier panels. Two of those that did went in opposite directions. People were more likely to say they stayed at home because of fear of crime in the 1996 panel than earlier. However they were less likely to say they carried something with them to protect themselves. Changes in the phrasing of these questions are probably responsible. In 1991-1992, the question on staying at home finished with the phrase "because you thought it would be unsafe to leave home," which was omitted from the 1996 question (although both referred to fear of crime as a motivation). In 1991-1992, the question on carrying something with you when you go out asked if you "ever" carry something with you, and this was, again, dropped from the 1996 panel question. Both these changes would, ex-ante, be expected to change responses in the observed direction.

The large decrease in fear of crime in home and neighborhood was not due to changes in question wording. The questions were nearly identical in all three panels. It is possible that with the widely publicized decreases in crime in the late 1990s, people genuinely felt safer. It may also be that respondents to the 1996 panel questionnaire handled the 4-point response categories differently, since they had already dealt with similar response scales on satisfaction with housing. Finally, it may also be that the shift from using “fairly” safe/unsafe to “somewhat” safe/unsafe in the 4-point scale in the 1996 panel resulted in changed responses.

Neighborhood conditions

The first few questions on neighborhood conditions ask straightforward questions about specific problems. The number reporting these problems seem to have dropped by 2 or 3 percentage points between 1992 and 1998. This does not seem to be due to differences in question wording, as the questions did not change.

The next two questions on satisfaction are again a comparison of two types of response scale. In the 1996 panel, respondents were equally likely to rate highly their neighborhood and their neighbors. In 1991-1992, neighbors were rated more highly.

Community services

The first question in the community services section is a rating of schools. Households answering this question (ones with children 0-18) were consistent across waves. The 54 percent rating themselves “very satisfied” was one of the lower positive responses of any satisfaction question in the 1996 panel. Likewise, the 31 percent rating schools 9 or 10 on a 10 point scale was one of the lower positive responses of any satisfaction question in the 1991 or 1992 panels. The 1996 panel follow-up questions on school attendance and attitudes were not asked in the earlier panels.

The questions on satisfaction with health services, police and fire services turned up similar patterns in 1998 (1996 panel) as in 1991-1992. Fire services were rated somewhat more highly than the other two. The last few questions in the section are not directly comparable because of changes in wording or skip patterns.

Part 2: Basic Needs.

Ability to meet basic needs

With the exception of rent, the ability to meet expenses followed a similar pattern across three panels. Problems with ability to pay bills was highest in the 1991 and 1992 panels, dropped in 1993 and rose again in the 1996 panel. The reason for the different pattern observed in the questions on paying rent is not obvious. The wording changes from earlier panels to the 1996 panel were minor, and would not be expected to affect the response to questions about rent any differently than other questions.

The follow up questions on getting help when experiencing difficulty meeting basic needs generated very similar results in the 1996 panel to the ones obtained earlier, despite some reworking of these questions for the CAPI setting. While earlier respondents were given a flashcard listing 18 possible sources of help,

the 1996 panel simplified things down to a short list of 5 sources. Nonetheless, the proportion choosing each type (when appropriately recoded) remains the same, as does the proportion saying they received no help at all.

Help when in need

The three questions on help expected when in need generated similar responses in the 1996 panel as they did in 1991 and 1992, although they were more optimistic about receiving help than the 1993 responses. There was an especially high proportion who expected help from friends and from other groups, which were higher in 1998 (1996 panel) than any earlier year. This was mostly due to a real change in sentiments, as question wording was not changed.

Food sufficiency and food security

The first question on food in the household is generally referred to as the question on “food sufficiency.” In 1993 the question had been changed from its original formulation to a two-part question, first separating out “not enough” food and then asking those with enough if it was the kind they wanted to eat. This resulted in a higher proportion answering “sometimes not enough” than in previous surveys. With the return to the original four-choice question in the 1996 panel, the distribution of answers returned to that observed in 1991-1992, except for a shift from those choosing “enough but not the kind we want” to “enough and the kind we want.” Question wording changes probably do not have an influence here.

For those who said they fell short of food, the month(s) this occurred was determined. The answers in the 1996 panel resembled those in previous panels, with slightly more naming the most recent month. The balance of the question on household food security were not present in previous panels.

REASONABLENESS OF DATA: COMPARISON WITH OTHER DATA SOURCES

The comparison of weighted survey estimates to estimates derived from other sources acts as another check of the general quality of the data. There are no nationally representative surveys that ask all the questions administered in the Adult Well Being topical module. However, comparisons can be made for selected items. In the review of the 1993 Wave 9 data, comparisons were made to surveys of basic needs of special subsets of the U.S. population. That comparison will not be repeated here.

American Housing Survey

Table 7 compares selected results from the 1996 SIPP Adult Well Being topical module (fielded in fall of 1998) to results of similar questions asked in the 1999 American Housing Survey (AHS; fielded in the fall of 1999).

The two surveys show almost identical results in terms of possession of consumer durables. The items on clothes washers and dryers show slightly higher levels of positive response in SIPP. This may be due to the wording in AHS, which adds “in this apartment” to the end of the question on these two items. The item on number of rooms generated very similar numbers despite the more detailed approach taken in AHS towards determining this number.

Similar results were also obtained in questions on problems with house or neighborhood. The largest discrepancies involved questions three topics. In the question on pests, SIPP included insects while the AHS asked only about rats and mice. In the question on plumbing, SIPP asked a single, general question while the AHS asked about specific problems. Street noise problems were determined by a single question in SIPP, but a two part question in AHS, first asking if there is street noise, second if it is a problem.

There was a little less agreement in the three attitudinal items compared in Table 7. The question on public schools differed mainly in that the SIPP question asked about public schools in this neighborhood, while the AHS asked about the schools that the children attend. The question on public transportation differs because SIPP includes in the “no” category all those who feel that public transportation is inadequate, while the AHS question includes only those who actually use public transportation and find it inadequate.

Given the differences in the way many of the questions were posed, the agreement between the SIPP Wave 8 data and the 1999 AHS is quite remarkable.

Computer Use Supplement, Current Population Survey

Computer ownership was not determined in the American Housing Survey, but questions on this subject were asked in the supplement in Computer Use in several years of the Current Population Survey (CPS). Because computer ownership has been rapidly growing, it is useful to compare the data obtained at several points in time. Table 8 shows responses on computer ownership from 1992 to 2000. The data obtained from the SIPP seem to fit with the numbers produced from CPS quite well.

Gallup Poll on Fear of Crime

Another subject where things have been changing is fear of crime. The SIPP question on whether there is a place nearby where you would be afraid to walk at night was adapted from the same question appearing periodically in the national Gallup poll. The results of both surveys are shown in Table 9. Here there is a substantial difference between the percentages found from the two sources. Given the many differences in data collection methods, it is hard to pinpoint a reason for this discrepancy.

Basic Needs Questions in National Survey of American Families

Table 10 shows a comparison of responses on basic needs questions between SIPP and the National Survey of American Families (NSAF). NSAF data were collected in February through October of 1999 under the auspices of the Urban Institute. The survey included 42,000 households in 13 states, weighted to produce national estimates.

The general question on ability to meet basic needs in NSAF was: “During the last 12 months was there a time when you were not able to pay your mortgage, rent or utility bills?” The SIPP question, by contrast, refers to “essential expenses” such as “mortgage or rent payment, utility bills, or important medical care.” Not surprisingly, the broader SIPP question generated higher levels of positive response, but not much higher.

The two food security questions asked both in SIPP and NSAF generated reasonably good agreement. The question about food not lasting had almost identical response patterns. The question on adults skipping meals generated fewer responses in SIPP, probably because the skip pattern ensured that households that had indicated no other food problems were not asked this question.

Food Security Supplement of the Current Population Survey

Table 11 shows the response pattern to the 1996 panel of the SIPP (fall 1998) and the 1998 Current Population Survey supplement on food security. The agreement in percentage of households agreeing with these items is fairly good. The small discrepancies that do exist (questions 3 through 5) are probably not due to question wording or skip patterns, as these are essentially identical. The major difference between the two surveys is that the reference period in SIPP is the past 4 months, while the reference period in the CPS is the past 12 months. The rate of positive responses in SIPP don't seem to be uniformly smaller, as would be expected from this difference.

SUMMARY

The basic needs data collected in the 8th Wave of the 1996 panel of SIPP appears to be reasonable. Unfortunately, some of the measurement areas in this module cannot easily be validated. Unlike factual data on earnings and employment which can be contrasted with other survey and administrative data sources, many of the questions in the Adult Well Being topical module ask a household respondent to report a general attitude or characterization of events that have taken place in the household. The overall level of nonresponse to these questions, comparison to the few pieces of outside data that could be brought to bear, and the consistency of responses across panels all provide confidence that these data are reliable and useful for many types of analyses.
