### Q: What is Adobe Reader for Nokia Series 80 Communicator software?

**A:** Adobe Reader for Nokia Series 80 Communicator is free software that lets you view and navigate PDF documents on a Symbian OS™ powered device, such as the Nokia 9500 Communicator. Adobe Reader for Nokia Series 80 Communicator enables you to view PDF files stored on your desktop computer using your Symbian OS powered device.

### Q: What Symbian OS devices does Adobe Reader for Nokia Series 80 Communicator support?

**A:** At this time, Adobe Reader for Nokia Series 80 Communicator runs on Nokia Communicator 9210, 9290, and 9500 series phones.

### Q: How do I download Adobe PDF files to my Symbian OS device?

**A:** To download PDF files to your Symbian OS device, use the Receive Via Infrared command, or download PDF files from your computer, your e-mail account, or the Internet. Follow the directions in the documentation that came with your device to connect to a computer or the Internet, and to download and transfer files.

### Q: How will Adobe PDF files look on my Symbian OS device?

**A:** Adobe Reader for Nokia Series 80 Communicator adapts PDF files for high-quality viewing on smaller screens while preserving their rich content.

### Q: What does it mean when a PDF is “tagged”?

**A:** When a PDF is tagged for re-flow, you can re-flow the content to fit on the smaller screen of your Symbian OS device. PDF authors create a tagged PDF file using Adobe Acrobat®.

To check whether the document is tagged, select Document Info from the toolbar. A “Yes” next to the Tagged PDF field means the PDF is tagged and you will be able to re-flow the PDF on your handheld device.

### Q: What viewing options are available for PDF files on my Symbian OS device?

**A:** On Symbian OS devices, you can view a PDF file in two ways:

- 1) **Re-flowed layout:** If your PDF file is tagged, you can use Reader for Nokia Series 80 Communicator to re-flow text and images so they are viewable within the confines of the smaller screen on your device. That way, you don't have to scroll to read the entire file.
- 2) **Original document layout:** You can view Adobe PDF files exactly as intended by the author. This option preserves the structure of the original file. Text and images remain where the author placed them.

Note that untagged Adobe PDF files can be viewed only in original document layout.

**Q: I can't re-flow an Adobe PDF document. What's wrong?**

**A:** If you can't re-flow a PDF document, it might be because the document isn't tagged for viewing on a handheld device. To check whether the document is tagged, select Document Info from the toolbar. A "Yes" next to the Tagged PDF field means the PDF is tagged and you will be able to re-flow the PDF on your handheld device.

**Q: How are Adobe Acrobat® and Adobe Reader for Nokia Series 80 Communicator related?**

**A:** Using Adobe Acrobat, you can convert an Adobe PDF file to a tagged Adobe PDF file that can be read with Adobe Reader for Nokia Series 80 Communicator. When the tagged Adobe PDF file is viewed on a Symbian OS device, you can choose to re-flow the file to fit on the smaller screen. PDF files created using Adobe Acrobat offer the best reading experience on your Symbian OS device.

**Q: How much does Adobe Reader for Nokia Series 80 Communicator cost?**

**A:** Like all Adobe Reader products, Adobe Reader for Nokia Series 80 Communicator is free downloadable software, and is available at [www.adobe.com](http://www.adobe.com) or wherever you see the Download Adobe Reader icon. In some cases, Adobe Reader can also be found on a companion CD packaged with your Nokia phone.

**Q: In what languages is Adobe Reader for Nokia Series 80 Communicator available?**

**A:** Acrobat Reader for Nokia Series 80 Communicator is available in English, French, German, Italian, Spanish, and Japanese.

**Q: Can I zoom in on images and tables on my Symbian OS device?**

**A:** Yes, but you must deselect re-flow mode. When re-flow mode is selected, Adobe Reader for Nokia Series 80 Communicator automatically wraps text to fit onto the smaller screen so you don't have to scroll horizontally to read the PDF file. This mode does not allow you to zoom in on images and tables beyond the width of the screen. Once you deselect re-flow, you can zoom in on images and tables, just as you can on your desktop computer.

**Q: Can I store my Adobe PDF files on memory storage cards on my Symbian OS device?**

**A:** Yes. You can store files on multimedia memory cards (MMCs). You can also read them from these cards.

**Q: Can I access Adobe Reader for Nokia Series 80 Communicator within a Web browser?**

**A:** No. Adobe PDF files accessed through a wireless connection on the Symbian OS device are opened in the Acrobat Reader for Nokia Series 80 Communicator application.
