PCCI Job #114/PCCI #196

Dear Sir:

Mr. Richard T. Hill, Chief of Construction for C.O.E. telephoned today to request that I provide the C.O.E. with the Engineering Report that is herewith enclosed from Roussel Engineering, Inc..

I had requested Mr. Duhon to set up a meeting for today or by noon Wednesday July 6, 1994 with the C.O.E. Engineering Division and others of the C.O.E.'s design team and our engineering consultants to discuss and hopefully resolve the serious wall alignment problems that our firm has experienced since January 1994.

Mr. Hill stated that he felt that a meeting for the submission of the Engineering Report by our consultants and our representatives would not accomplish very much since the C.O.E. Engineering Division and Design Team would not or could not be in position to respond to matters that would be reviewed or discussed at the proposed meeting without the benefit of review of the Engineering Report prior to a meeting.

Page 2

The project record clearly indicates our firm has requested soil reports, soil boring information, and other data relating to the design and load carrying capacity of the existing sheet piling since April 20, 1994. The C.O.E. finally provided all available information on the project on June 27, 1994. This fact was re-confirmed with Mr. Jim Richardson on June 30, 1994.

Immediately after Mr. Richardson's confirmation that we have in fact received all engineering design data that the C.O.E. has on this project we met with our engineering consultants and advised them accordingly. Our consultants were then able to finalize their engineering report which was made available to our firm for the proposed meeting today.

Prior to our receipt of the C.O.E. Job Deficiency No. 001 dated February 8, 1994 and C.O.E. letter dated February 9, 1994, our firm had been performing additional work required in a positive effort to comply with the plans and specifications for this project of maintaining the construction tolerances specified. The C.O.E. have been very critical of our firm by alleging violations and non-compliance with the specifications in regards to our concrete operations, quality control, etc.. Not only have we suffered very serious delays in our overall construction program which has extended the completion of the project, in addition the loss of productivity, labor inefficiency, loss of the use of all construction equipment on the site, extended job overhead, etc. has increased the cost of the project tremendously.

Due to the fact of the overall delay experienced thus far in our construction program, there remains many wall sections that have not yet been constructed. Now is the time of decision for the C.O.E..

1. Should PCCI be further compelled to continue the very costly and time-consuming work in an effort to comply with the specified Construction Tolerances as indicated in the Technical provision C3D-4:2 in view of the facts as indicated in the Roussel Engineering, Inc. July 5, 1994 Report?

2. Should PCCI be permitted to construct the remaining wall sections in the normal manner of forming and placing concrete without the abnormal requirements of providing all that has been supplied such as additional labor, material, equipment, extended overhead, etc., due to conditions beyond its control?

We respectfully request a meeting with the proper authorized

PITTMAN CONSTRUCTION CO., INC.

New Orleans District, Corps of Engineers  
July 5, 1994  
Page 3

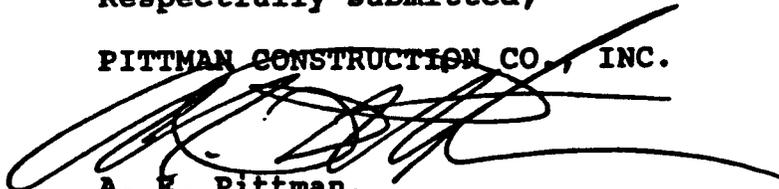

C.O.E. personnel to discuss this very important matter as soon as possible after the review of this letter and the enclosed Engineering Report.

PCCI has been previously advised by Mr. Duhon that the C.O.E. would certainly consider the issuance of a change order to PCCI for all additional costs incurred by PCCI if and when we were able to confirm that the existing sheet piling were in fact deflecting thus placing the additional hardship on PCCI of maintaining the tolerances specified. We think the Engineering Report provides a confirmation of sheet pile deflection.

Your consideration of our request for an early meeting to resolve this very important matter will be appreciated.

Respectfully submitted,

PITTMAN CONSTRUCTION CO., INC.

Job #114/PCCI #195

Dear Mr. Duhon:

Reference is made to my telephone conversation with you today regarding the scheduling of a meeting with you, Mr. Jim Richardson of the Engineering Division and any other members of the C.O.E. Design Team to discuss and hopefully resolve the serious wall-alignment problems that our firm has experienced on the Type I and Type II walls since January 1994. Hopefully, the meeting can be held Tuesday, July 5, 1994.

PCCI engineering consultants are now prepared to review their calculations after their study of the soils report information provided by the Office of Counsel of the C.O.E. received by PCCI starting June 22, 1994. On June 30, 1994 Mr. Jim Richardson of the C.O.E. confirmed that PCCI had been furnished with all of the design information that the C.O.E. has available on the project.

I am sure, Mr. Duhon, that you will recall that when PCCI received the C.O.E. Notice Of Contract Deficiency Number 001 dated February 8, 1994 PCCI reacted immediately in an attempt to solve the wall-

H:\PROGRAMS\WP51\STATION7\COROFENG.195

Corps of Engineers  
July 1, 1994  
Page 2

alignment problems which have continued to be a very time-consuming expensive task that has caused lack of productivity and labor inefficiency on this project. As you know, the problems have continued and are still ongoing.

During a scheduled jobsite meeting on February 23, 1994 at 1:30 p.m., PCCI advised you that PCCI had assigned our engineering consultants the task of reviewing and reporting their findings regarding the problems of wall alignment that PCCI had experienced.

Engineering studies during February and March of 1994 revealed it would be necessary that we request the C.O.E. to provide PCCI with all soil reports, soil boring information and other data relating to the design and load carrying capacity of the existing sheet piling as the information relates to the unbalanced Type I and Type II walls. On April 20, 1994 at 2:30 p.m. during a jobsite meeting you stated that you would discuss the wall design with the C.O.E. Engineering Division and request that PCCI be provided with the information that PCCI requested during the meeting, however, as of June 15, 1994, PCCI had not been provided with the information requested approximately two months earlier, on April 20, 1994.

As you should recall, Mr. Duhon, PCCI's letter Job #114/PCCI #188 again requested that PCCI be provided with the information previously requested during the April 20 jobsite meeting. You advised our Mr. Chris Pittman on June 21 that it would be necessary for PCCI to request all required engineering information through the Freedom Of Information Act by written request to Mr. Joe Towers, Office of Counsel, who represents the C.O.E.. PCCI's letter Job #114/PCCI #189 dated June 21, 1994 was hand delivered to him that day. PCCI received the first part of the requested information on June 22 and the last of the information on June 27 from the Office of Counsel.

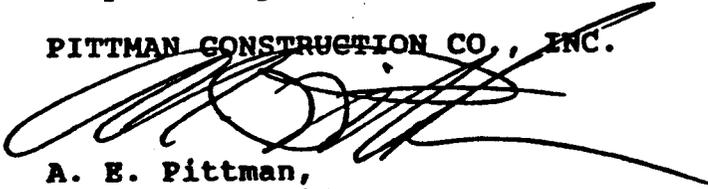

Since it has been a very lengthy process in obtaining the engineering information, and the ongoing wall-alignment problems continue, we would appreciate being given the opportunity to meet with all parties as requested to review all information pertaining to the wall-alignment problems, hopefully next Tuesday (July 5) in the early afternoon or before noon on Wednesday (July 6).

We trust you will honor our request.

Re: Sheet Pile Deflections

Dear sir,

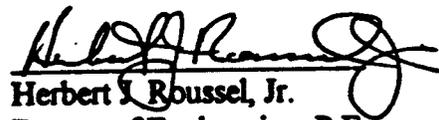

Nine cases were reviewed. Various values of the soil cohesion were used based on the soil information supplied. The summary sheet, which is the last sheet in the set of calculations, shows the deflections at the top of the concrete wall at Elevation 14.0 feet for all cases. Cases 1 through 4 are based on values from Table 4-2 in the reference noted. Cases 1A through 4A are based on values from Table 4-4 in the reference noted. Cases 1A through 4A give slightly higher deflections. Where "KS LOW" is noted, the lowest average values of the soil cohesion were used. Where "KS AVERAGE" is noted, the average values of the soil cohesion were used.

The conclusion that is noted is based on the above 8 cases. This soil is so weak and may have been further weakened by the additional driving of the sheet pile that increasing the penetration can not get the deflection within tolerance. After some period of time the soil may regain strength that was lost from driving.

Case 2B shows the effect of applying 900 pounds of lateral force at node 8, top of dry bottom on the canal side. This may be done at an additional cost during construction of the wall but once this force is removed the wall will deflect as noted on the summary sheet.

If I can be of further service, please call upon me.

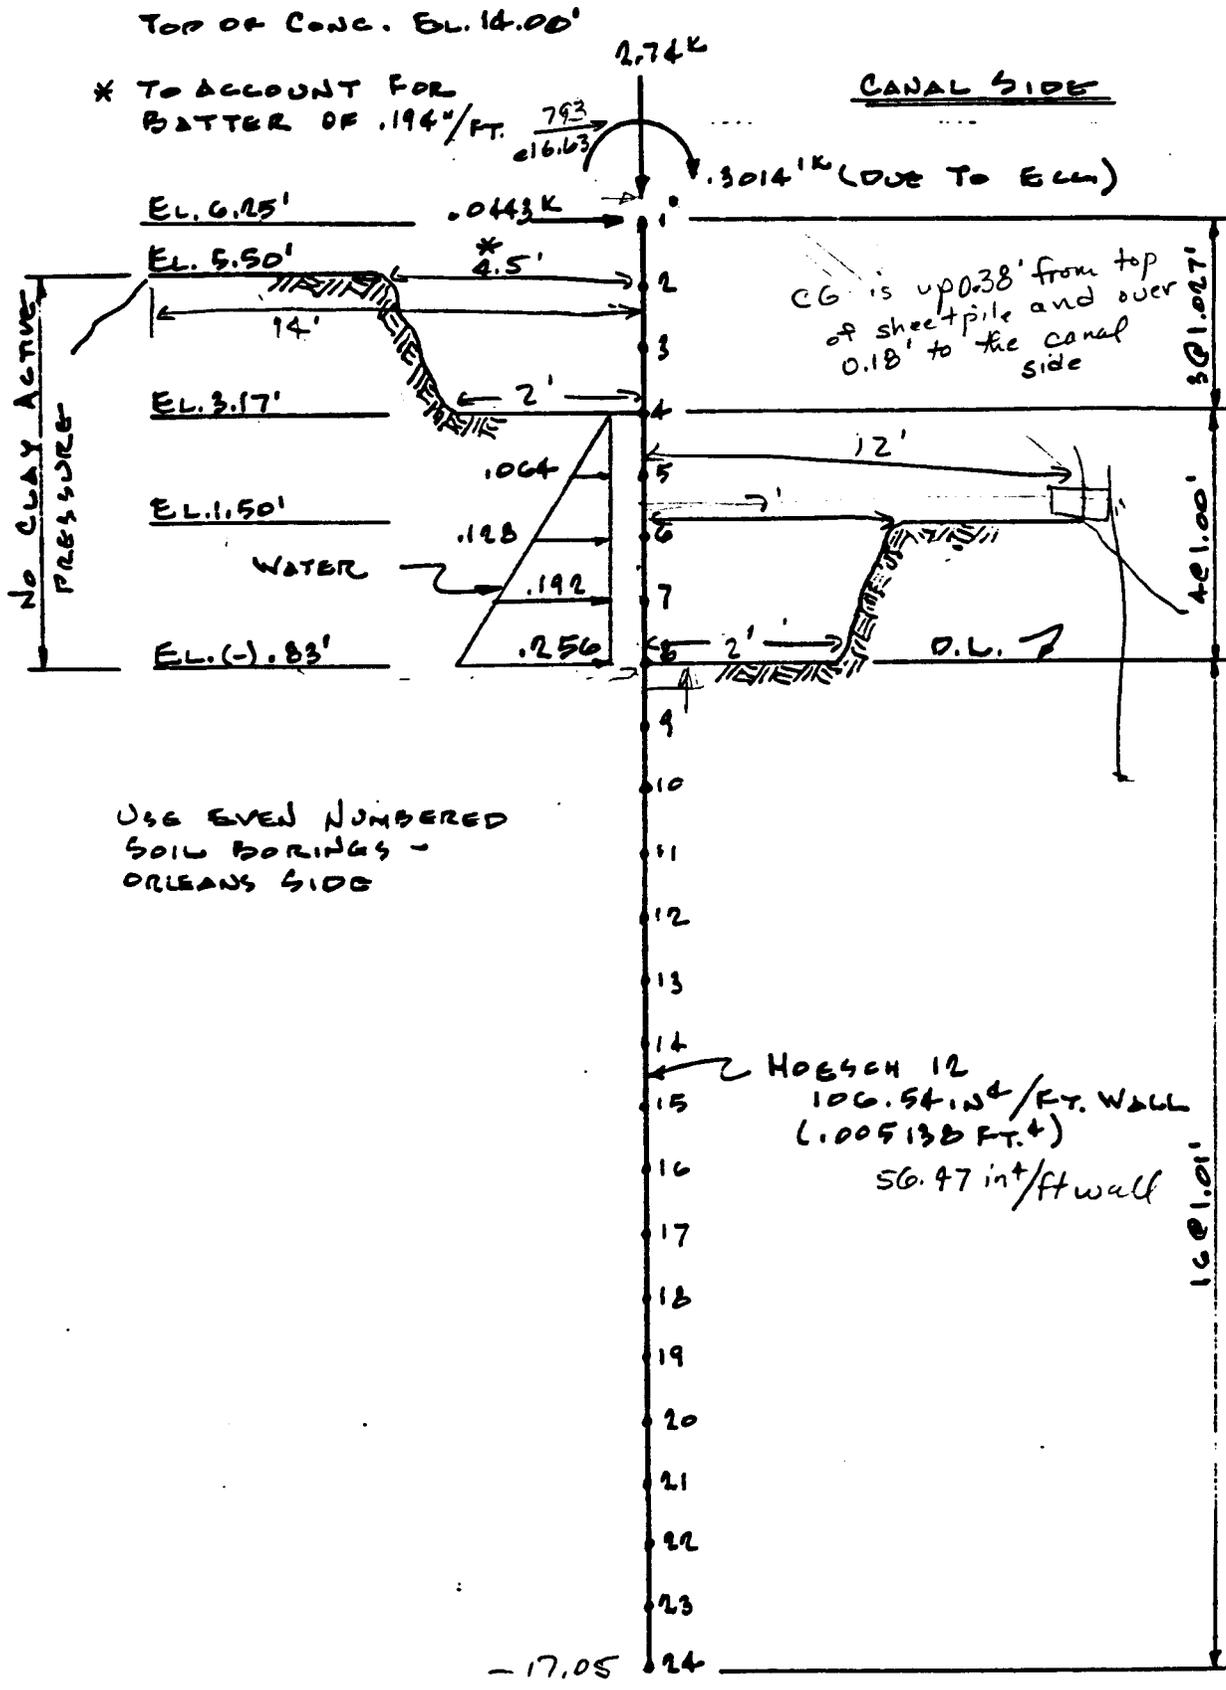

Sincerely,

  
Herbert J. Roussel, Jr.  
Doctor of Engineering, P.E.  
President

SOLUTION FOR SHEET PILE WALL

MODULUS OF ELASTICITY = 4176000.00 KSF  
NODES REQUIRING SOIL SPRINGS READ = 0  
MODE D.L. SOIL STARTS = 8  
MAXIMUM LINEAR SOIL DEFORMATION = .040 FT  
SOIL MODULUS =  $14.760 + .390 \times 2^{**} .500 \text{ K/FT}^{**3}$   
NUMBER OF NON-ZERO P-MATRIX ENTRIES = 2

NUMBER OF LOAD CONDITIONS = 1  
DEPTH INCREMENT = .000 FT  
DREDGE LINE REDUCTION FACTOR = .700  
NUMBER OF BOUNDARY CONDITIONS = 0  
NUMBER OF NP = 48  
NUMBER OF MEMBERS = 23  
MAXIMUM NUMBER OF ITERATIONS = 5  
NON-LINEAR CHECK (IF > 0) = 1

SUM SPRING FORCES = .6416 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02945 \* 12.0) + (.00216 \* 12.0 \* 7.75) = .554 IN.

SOLUTION FOR SHEET PILE WALL

MODULUS OF ELASTICITY = 4176000.00 KSF  
NODES REQUIRING SOIL SPRINGS READ = 0  
NODE D.L. SOIL STARTS = 8  
MAXIMUM LINEAR SOIL DEFORMATION = .040 FT  
SOIL MODULUS =  $20.590 + .390 \times 2^{.500} \text{ K/FT}^{.5}$   
NUMBER OF NON-ZERO P-MATRIX ENTRIES = 2

NUMBER OF LOAD CONDITIONS = 1  
DEPTH INCREMENT = .000 FT  
DREDGE LINE REDUCTION FACTOR = .700  
NUMBER OF BOUNDARY CONDITIONS = 0  
NUMBER OF MP = 48  
NUMBER OF MEMBERS = 23  
MAXIMUM NUMBER OF ITERATIONS = 5  
NON-LINEAR CHECK (IF > 0) = 1

SUM SPRING FORCES = .6420 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02347 \* 12.0) + (.00181 \* 12.0 \* 7.75) = .450 IN.

SOLUTION FOR SHEET PILE WALL

MODULUS OF ELASTICITY = 4176000.00 KSF  
NODES REQUIRING SOIL SPRINGS READ = 0  
NODE D.L. SOIL STARTS = 8  
MAXIMUM LINEAR SOIL DEFORMATION = .040 FT  
SOIL MODULUS = 14.760 + .390\*2\*\* .500 K/FT\*\*3  
NUMBER OF NON-ZERO P-MATRIX ENTRIES = 2

NUMBER OF LOAD CONDITIONS = 1  
DEPTH INCREMENT = .000 FT  
DREDGE LINE REDUCTION FACTOR = .700  
NUMBER OF BOUNDARY CONDITIONS = 0  
NUMBER OF NP = 54  
NUMBER OF MEMBERS = 26  
MAXIMUM NUMBER OF ITERATIONS = 5  
NON-LINEAR CHECK (IF > 0) = 1

SUM SPRING FORCES = .6418 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02659 \* 12.0) + (.00196 \* 12.0 \* 7.75) = .501 IN.

ADDITIONAL PENETRATION = 19.19 - 16.16 = 3.03 FT.

PITTMAN SHEET PILE - CASE 4 - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW

SOLUTION FOR SHEET PILE WALL

MODULUS OF ELASTICITY = 4176000.00 KSF  
NODES REQUIRING SOIL SPRINGS READ = 0  
NODE D.L. SOIL STARTS = 8  
MAXIMUM LINEAR SOIL DEFORMATION = .040 FT  
SOIL MODULUS =  $14.760 + .390Z^{**} .500 \text{ K/FT}^{**3}$   
NUMBER OF NON-ZERO P-MATRIX ENTRIES = 2

SUM SPRING FORCES = .6418 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02507 \* 12.0) + (.00187 \* 12.0 \* 7.75) = .475 IN.

ADDITIONAL PENETRATION = 30.30 - 16.16 = 14.14 FT.

SOLUTION FOR SHEET PILE WALL

MODULUS OF ELASTICITY = 4176000.00 KSF  
NODES REQUIRING SOIL SPRINGS READ = 0  
NODE D.L. SOIL STARTS = 8  
MAXIMUM LINEAR SOIL DEFORMATION = .040 FT  
SOIL MODULUS = 13.310 + .390\*2\*\* .500 K/FT\*\*3  
NUMBER OF NON-ZERO P-MATRIX ENTRIES = 2

SUM SPRING FORCES = .6422 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02515 \* 12.0) + (.00191 \* 12.0 \* 7.75) = .479 IN.

SOLUTION FOR SHEET PILE WALL

MODULUS OF ELASTICITY = 4176000.00 KSF  
NODES REQUIRING SOIL SPRINGS READ = 0  
NODE D.L. SOIL STARTS = 8  
MAXIMUM LINEAR SOIL DEFORMATION = .040 FT  
SOIL MODULUS = 13.310 + .390\*Z\*\* .500 K/FT\*\*3  
NUMBER OF NON-ZERO P-MATRIX ENTRIES = 2

NUMBER OF LOAD CONDITIONS = 1  
DEPTH INCREMENT = .000 FT

SUM SPRING FORCES = .6429 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02683 \* 12.0) + (.00196 \* 12.0 \* 7.75) = .504 IN.

ADDITIONAL PENETRATION = 23.23 - 16.16 = 7.07 FT.

PITTMAN SHEET PILE - CASE 4A - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW

SOLUTION FOR SHEET PILE WALL

SUM SPRING FORCES = .6429 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.02647 \* 12.0) + (.00194 \* 12.0 \* 7.75) = .498 IN.

ADDITIONAL PENETRATION = 30.30 - 16.16 = 14.14 FT.

SUM SPRING FORCES = .6405 VS SUM APPLIED FORCES = .6425 KIPS

APPLIED FORCES ADJUSTED FOR NON LINEAR SOIL REACTIONS WHEN SPRINGS ARE ZEROED

DEFLECTION AT ELEV. 14.0 = (.04474 \* 12.0) + (.00304 \* 12.0 \* 7.75) = .820 IN.

**SUMMARY SHEET**

\*\*\*\*\*  
REFERENCE: "FOUNDATION ANALYSIS AND DESIGN" BY J.E. BOWLES, FOURTH EDITION, 1988, CHAPTERS 4 AND 13  
\*\*\*\*\*

CASES 1, 2, 3 AND 4 ARE BASED ON VALUES FROM TABLE 4-2. WEIGHT OF CONCRETE, AFTER FORMS ARE REMOVED, IS APPLIED AT TOP OF SHEET PILE. A MOMENT DUE TO ECCENTRICITY OF WEIGHT AND A HORIZONTAL FORCE TO ACCOUNT FOR SHEET PILE BATTER ARE APPLIED AT ELEVATION 6.25 FEET.

PITTMAN SHEET PILE - CASE 1 - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW  
DEFLECTION AT ELEV. 14.0 =  $(.02945 * 12.0) + (.00216 * 12.0 * 7.75) = .554$  IN.

PITTMAN SHEET PILE - CASE 2 - WATER PRESSURE AT NODES 4 THRU 8 - KS AVERAGE  
DEFLECTION AT ELEV. 14.0 =  $(.02347 * 12.0) + (.00181 * 12.0 * 7.75) = .450$  IN.

PITTMAN SHEET PILE - CASE 3 - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW  
DEFLECTION AT ELEV. 14.0 =  $(.02659 * 12.0) + (.00196 * 12.0 * 7.75) = .501$  IN.

ADDITIONAL PENETRATION =  $19.19 - 16.16 = 3.03$  FT.

PITTMAN SHEET PILE - CASE 4 - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW  
DEFLECTION AT ELEV. 14.0 =  $(.02507 * 12.0) + (.00187 * 12.0 * 7.75) = .475$  IN.

ADDITIONAL PENETRATION =  $30.30 - 16.16 = 14.14$  FT.

NOTE: CASE 3 ASSUMES 3.03 FT. OF ADDITIONAL PENETRATION AND ONLY REDUCES THE DEFLECTION AT ELEV. 14.0 BY .053 IN. RELATIVE TO CASE 1

CASE 4 ASSUMES 14.14 FT. OF ADDITIONAL PENETRATION AND ONLY REDUCES THE DEFLECTION AT ELEV. 14.0 BY .079 IN. RELATIVE TO CASE 1

CONCLUSION: ADDITIONAL PENETRATION WILL NOT REDUCE THE DEFLECTION TO WITHIN TOLERANCE .

\*\*\*\*\*  
CASES 1A, 2A, 3A AND 4A ARE BASED ON VALUES FROM TABLE 4-4. WEIGHT OF CONCRETE, AFTER FORMS ARE REMOVED, IS APPLIED AT TOP OF SHEET PILE. A MOMENT DUE TO ECCENTRICITY OF WEIGHT AND A HORIZONTAL FORCE TO ACCOUNT FOR SHEET PILE BATTER ARE APPLIED AT ELEVATION 6.25 FEET.

PITTMAN SHEET PILE - CASE 1A - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW  
DEFLECTION AT ELEV. 14.0 =  $(.03172 * 12.0) + (.00229 * 12.0 * 7.75) = .594$  IN.

PITTMAN SHEET PILE - CASE 2A - WATER PRESSURE AT NODES 4 THRU 8 - KS AVERAGE  
DEFLECTION AT ELEV. 14.0 =  $(.02515 * 12.0) + (.00191 * 12.0 * 7.75) = .479$  IN.

PITTMAN SHEET PILE - CASE 3A - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW  
DEFLECTION AT ELEV. 14.0 =  $(.02683 * 12.0) + (.00196 * 12.0 * 7.75) = .504$  IN.

ADDITIONAL PENETRATION =  $23.23 - 16.16 = 7.07$  FT.

PITTMAN SHEET PILE - CASE 4A - WATER PRESSURE AT NODES 4 THRU 8 - KS LOW  
DEFLECTION AT ELEV. 14.0 =  $(.02647 * 12.0) + (.00194 * 12.0 * 7.75) = .498$  IN.

ADDITIONAL PENETRATION =  $30.30 - 16.16 = 14.14$  FT.

NOTE: CASE 3A ASSUMES 7.07 FT. OF ADDITIONAL PENETRATION AND ONLY REDUCES THE DEFLECTION AT ELEV. 14.0 BY .090 IN. RELATIVE TO CASE 1A

CASE 4A ASSUMES 14.14 FT. OF ADDITIONAL PENETRATION AND ONLY REDUCES THE DEFLECTION AT ELEV. 14.0 BY .096 IN. RELATIVE TO CASE 1A

CONCLUSION: ADDITIONAL PENETRATION WILL NOT REDUCE THE DEFLECTION TO WITHIN TOLERANCE

\*\*\*\*\*  
THIS CASE ASSUMES THAT 900 POUNDS LATERAL FORCE CAN BE APPLIED AT NODE 8 TOWARDS PROTECTED SIDE

PITTMAN SHEET PILE - CASE 2B - WATER PRESSURE AT NODES 4 THRU 8 - KS AVERAGE  
DEFLECTION AT ELEV. 14.0 =  $(.00004 * 12.0) + (.00026 * 12.0 * 7.75) = .025$  IN.

Job #114/PCCI #201

Dear Mr. Duhon:

This letter confirms our telephone conversation at approximately 1:40 this afternoon. You advised the writer that you and other C.O.E. personnel discussed my request to permit me and Mr. Herbert J. Roussel, Jr. to meet and provide you and other C.O.E. personnel with the Roussel Engineering, Inc. July 27, 1994 Report (copy enclosed). We regret that you declined to let us meet with you today. You further advised that PCCI should provide the report for you and the other C.O.E. personnel to review and then sometime in the near future, you and the other C.O.E. personnel might agree to let us meet with you all, and that you would then respond to the Roussel Engineering, Inc. Report herewith enclosed.

Mr. Roussel and I were hoping that we would be permitted to provide to you and some of your technical engineers further input, if so required, regarding the enclosed Report. We certainly did not expect any decisions from you or the technical engineers in your office today.

We are aware of the fact that you and other C.O.E. personnel are very busy. We do not expect to receive any special consideration; however, we thought that, inasmuch as you and Mr. Chester Ashley were in attendance during the placement of concrete

and the special testing on Monolith Number 108 that was video taped, perhaps you, Mr. Chester Ashley and your other technical engineers would be interested in discussing this matter with Mr. Roussel.

Mr. Duhon, please be advised that PCCI has not responded to three letters from the C.O.E. to PCCI signed by Mr. Chester Ashley that are dated: July 11, 1994, July 15, 1994 & July 22, 1994, pending the completion of the tests that were detailed and conducted by Roussel Engineering, Inc. that were started shortly after our July 12, 1994 meeting in your office and completed yesterday (July 26, 1994).

The enclosed Roussel Engineering, Inc. Report provides detailed information that substantiates the position of PCCI for the entitlement of monetary consideration due to the C.O.E. design deficiencies.

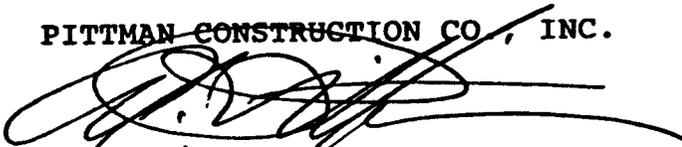

Needless to say, PCCI is in total disagreement with the C.O.E.'s July 22, 1994 letter signed by Mr. Chester Ashley, -in particular, the last sentence on page 2 which states: "Your alleged claim for additional compensation has no merit."

PCCI certainly will continue to perform the work included in the scope of its contract for this project; however, we hereby request an early meeting, hopefully, this week, to discuss the remaining work yet to be performed on the project and to obtain the the C.O.E.'s position in view of the Roussel Engineering, Inc. Report.

We trust you understand our position. Rest assured of our cooperation. Hopefully we will be able to negotiate a settlement on this matter with the C.O.E. without the necessity of litigation.

Respectfully submitted,

PITTMAN CONSTRUCTION CO., INC.

A. E. Pittman,  
President
