

Texas Bridges Are Safe

All bridges open to traffic on Texas public roads in the State of Texas are safe.

The Texas Department of Transportation has a very thorough bridge inspection program. TxDOT inspects every bridge in Texas at least once every 24 months. These inspections include an on-site evaluation of each component of the bridge.

As part of the inspection, the bridge is load rated by engineering analysis to determine its safe load capacity. If the load rating determines the structure cannot safely carry the state legal load – 80,000 pounds – then the bridge is load restricted and signs are posted. If the condition of the bridge reaches an unacceptable level, the bridge is closed. This inspection and load rating process ensures all open bridges are safe.

Quick Bridge Facts:

- Texas has more than 50,000 on- and off-system bridges, more than any other state. This constitutes 1/12th of the nation's bridge infrastructure (600,000 bridges in U.S.).
 - Approximately 33,000 bridges are on the Texas state highway system, and approximately 17,000 Texas bridges are off-system.
- 2,024 bridges, only 4 percent of all Texas bridges, are categorized as structurally deficient. 445 bridges categorized as structurally deficient are on the state highway system and 1,579 are off-system structures. Less than 1.5 percent of the state's on-system bridges are rated as structurally deficient.
- 282 bridges categorized as structurally deficient are currently being rehabilitated or replaced. Another 1,303 bridges classified as structurally deficient are under development as part of the state's ten-year Unified Transportation Plan. The state's remaining 439 bridges classified as structurally deficient are not currently scheduled for rehabilitation or replacement, and no funding has been identified for them.

- MORE -

Definitions of Bridge Terms:

- **Structurally Deficient** – The term "structurally deficient" is used by the Federal Highway Administration to designate bridges eligible for federal funding. Bridges are considered structurally deficient if significant elements of the bridge are deteriorating or damaged, extreme restriction on load carrying capacity or the adequacy of the waterway opening under the bridge is extremely inadequate. A structurally deficient bridge should not be confused with an unsafe bridge. Through regular inspection, TxDOT identifies unsafe conditions and closes unsafe bridges. A structurally deficient bridge, when open to traffic, typically requires significant maintenance and repair to remain in service and eventual rehabilitation or replacement to address deficiencies. To remain in service, structurally deficient bridges are often posted with weight limits to restrict the gross weight of vehicles to less than the maximum weight allowed by Texas law (80,000 pounds).
- **Sufficiency Rating** – The federal government uses inspection data compiled by TxDOT to calculate a complex formula called the sufficiency rating to determine federal bridge program funding eligibility. The sufficiency rating is a number calculated for each bridge from numerous variables that evaluate structural adequacy and safety, serviceability and functional obsolescence and essentiality for public use. Sufficiency rating values range from 0 (low) to 100 (high). For a bridge to qualify for federal Highway Bridge Program funds the sufficiency rating must be 80 or below and the bridge must be classified as structurally deficient or functionally obsolete. A low sufficiency rating number does not necessarily mean that the bridge is in need of immediate repair. Unsafe bridges are closed to traffic.
- **On-system bridge** – These bridges are part of the designated state highway system, are administered by TxDOT, and are typically funded with a combination of federal and state or state-only funds.
- **Off-system bridge** – These bridges are not part of the designated state highway system and are under the direct jurisdiction of a local government entity such as a county, city, or special district with authority to finance a highway improvement project. These projects may be funded locally or with state-administered federal Highway Bridge Program (HBP) funds (80% federal, 10% state, 10% local).

Structurally Deficient Bridge Status Report as of July 13, 2007

Status - Under construction
 Status A - Scheduled to be let in next 10 years under the fiscally constrained Unified Transportation Plan
 Status B - Not scheduled for rehabilitation or replacement - Funding not identified
