

FCC Consumer Advisory

DIGITAL TELEVISION TRANSITION *Digital-To-Analog Converter Box - Selected Features*

DTV Converter Box Features

The Federal Communications Commission has prepared this Consumer Advisory on selected features in 41 digital-to-analog converter boxes that it has purchased. Converter boxes are to be used with your analog television to receive digital signals broadcast for free over-the-air to your antenna. All the converter boxes listed here are certified under the National Telecommunications and Information Administration (NTIA) converter box coupon program and, therefore, are eligible for purchase using a coupon issued by the NTIA. Coupons are worth \$40, and are applied towards the purchase of converter boxes, which generally are priced at \$40 to \$80. Visit NTIA's website at www.DTV2009.gov or call 1-888-388-2009 for more information on how to request up to two coupons per household.

These 41 converter boxes are currently available for retail purchase. The features described in this advisory include features of particular interest to the disabilities community, as recommended by the Commission's Consumer Advisory Committee.

The Advisory will be updated as more NTIA-approved boxes become available at retail stores and online.

NOTE: All coupon eligible boxes meet the minimum standards set by NTIA, the federal agency responsible for administering the converter box coupon program. See www.ntia.doc.gov/ntiahome/frnotices/2007/DTVFinalRule_031207.htm. NTIA's website lists a total of 159 coupon eligible converter boxes which have been approved for the coupon program (www.DTV2009.gov).

The FCC does not endorse any particular product or product manufacturer.

CLOSED CAPTION FEATURES

Broadcasters can transmit closed captions in two formats. All captioned programs must include the basic analog-equivalent ("basic" or "608") captions. A DTV broadcaster may also include advanced digital ("advanced" or "708") captions, which can have additional features such as customizable fonts, colors, sizes and screen positions.

NTIA rules require all coupon eligible converter boxes ("CECBs") to convert the basic captions so that analog TVs can decode and display them. In this case the viewer would use the settings on their TV to turn on the captions.

Most CECBs also have the ability to decode the captions themselves, meaning that the viewer could use the settings on the converter box to turn on the captions. This way the viewer would be able to use the advanced features of 708 captions.

Converter Box	Decode basic and advanced captions?*	Caption button on remote?	What does the caption button do?***	Retains caption settings when powered off?

*All boxes convert basic captions on the digital signal so that they can be viewed using the settings on an analog TV.

**These boxes could decode only CC1 (captions in the primary language) and CC2 (data that augments information carried in the program) basic captions. The other boxes that decode basic captions also decode CC3 (alternative program-related caption data, typically captions in a second language) and CC4 (data that augments information carried in the program).

*****Menu** - The CC button brings up the captions menus on the converter box.

Sequential - the CC button progresses through each of the caption options in sequence.

Toggle - the CC button turns the captions either on or off. Caption preferences must first be configured through the captions menus on the converter box.

****Sequential function cycles only through basic caption modes. Advanced captions can be accessed through menu only.

SECONDARY AUDIO PROGRAMMING FEATURES

Some broadcasters send additional audio channels in foreign languages and/or with a voice-over describing the movements on screen for the vision impaired. Digital television allows up to 4 audio channels to be transmitted at a time. Some of the remote controls have a button allowing easy access to the SAP feature. This button may be labeled "audio" or "SAP."

Zinwell ZAT-970A	At least one	Yes

*Refers to the number of additional audio channels that the box can access, if provided by the broadcaster.

REMOTE CONTROL FEATURES

All coupon-eligible converter boxes have remote controls, though the features vary. Boxes that have universal remotes are able to control the power and/or volume for your television set. Some universal remotes may have the ability to control other devices such as your VCR or stereo amplifier.

Remote control buttons vary in size. Some consumers may find it more comfortable to use a remote control with larger buttons to make it easier to push one button. Other consumers may find it easier to use a remote control with smaller buttons because the overall size of the remote control is typically smaller and easier to hold.

ADDITIONAL/ADVANCED FEATURES

- **Adding Channels:** All coupon-eligible converter boxes have the ability to scan the airwaves for available channels, but not all boxes can add channels to your line-up without deleting channels. This may be important to you if you live between two cities and have to point your antenna in different directions to receive different stations. Some boxes can add channels through an update **scan**, which may take 5 or more minutes and will find new channels and add them to your lineup without deleting your existing lineup. A **"direct"** add allows you to add a channel to the lineup without scanning, but you must know the RF channel number, which is not always the same as the channel number used for marketing. **Some boxes have both an update scan and a direct add function.**
- **Analog Pass-Through:** While all domestic full-power television stations will be discontinuing analog service on or before February 17, 2009, you may be able to receive some analog television after this date. Channels in Canada and Mexico will not transition to digital broadcasting on February 17. Additionally, most low-power, "Class A," and translator stations in the U.S. will continue to broadcast analog signals. A converter box with "analog pass-through" capability allows broadcast signals to pass through the converter box to be tuned by your analog TV without the need to use an "A/B switch" or a "signal splitter" and extra cable to route the analog signals around the converter box.
