## **U.S. Army Corps of Engineers encourages water safety**

*FORT WORTH, Texas* – Drowning is the nation's second leading cause of accidental death, yet it is possible -- just by wearing a life jacket -- to reduce drowning deaths. Statistics show that 90 percent of those who drown at U.S. Army Corps of Engineers lakes may have survived if they had done so. Here are safety tips from the Corps of Engineers to help recreation seekers keep safe and have fun during water-based activities over the Memorial Day holiday weekend and the summer.

### Alcohol and water don't mix

More than half of all drowning fatalities involve alcohol. Just one beer can impair balance, vision, judgment, and reaction time. Research shows that four hours of boating, exposure to noise, vibration, sun, glare, and wind produces fatigue that simulates drunkenness. Boating fatigue combined with alcohol consumption intensifies the effects and increases accident risk. So remember, if you plan on having fun in, on, or near the water, don't drink alcohol.

### Boaters!

Know your boat and know the rules of the road. Take a safe boating course. Visit <http://www.cgaux.org> for information on boating classes.

View the Texas Parks and Wildlife state regulations governing boating at <http://www.tpwd.state.tx.us/>.

Carry a set of navigational charts on board.

Check your boat for all required safety equipment. Visit <http://www.cgaux.org/>

Don't overload the boat (consider boat size, the number passengers, and extra equipment before loading).

Follow manufacturer's suggested procedures before starting the engine.

Wear a life jacket - don't just carry one on board. Make sure it is U.S. Coast Guard approved and appropriately sized.

Texas law requires life jackets for all children age 12 and younger, unless otherwise specified by state law. Know your state law!

Check the weather forecast.

File a float plan with family or friends who are not on the vessel.

## Army Corps of Engineers Offers Water Safety Tips – 2/2/2

Swimmers! LEARN TO SWIM...LEARN TO SWIM WELL!

Drowning is the second leading cause of accidental deaths in persons 15-44 years of age.

Surprisingly, two-thirds of those who drown never had the intention of being in the water.

Watch your children at all times when around the water.

Never dive into lakes and rivers... the results can be tragic.

Never rely on toys such as inner tubes and water wings to stay afloat.

Don't take chances by over-estimating your swimming skills.

Reach or throw a flotation device to help someone in trouble. Don't go in the water!

Swim only in designated swimming areas.

Never swim alone.

Please make your visit to any recreation area a safe and enjoyable one. Taking water safety precautions saves lives.
