GENERAL NOTES:

- Soundings are in feet and tenths and refer to the plane of Mean Lower Low Water (MLLW) 1983-2001 Tidal Epoch.
- Topography shown is from previous surveys and/or NOAA Chart No. 12368. All topography, including shoreline, bridges, piers, etc., is located approximate unless otherwise noted and should be used as a general reference only.
- Bench Mark Data: BM 8609 A (1995) is a standard NOS Tidal Station disk, stamped "8609 A 1995", set in the concrete base of a flagpole at the Fairfield County Savings Bank at the intersection of Rowayton Avenue and McKinley Street, 50.9 feet (15.5 m) north of the north corner of the bank, 36J feet (11.0 m) south-southwest of the centerline of McKinley Street, 33J feet (10J m) southeast of the centerline of Rowayton Avenue and 10J feet (0.3 m) south-southwest of the flagpole. Elevation is 12.42 feet above MLLW.
- Coordinates shown are based on the Lambert Grid System for the State of Connecticut (Zone 0600) and NAD 1927.
- Survey was performed using an Odem MK3 echotrac echosounder. Vessel positioning was obtained utilizing a Trimble 4000 SSE GPS Receiver with the U.S. Coast Guard Beacon System.
- The sounding information shown on these maps represents the SHORTEST soundings of those obtained from hydrographic surveys conducted from February to March 2006.
- The sounding information depicted on these maps should NOT be used to determine volumes. Volumes are determined from more sounding information than shown. Additional sounding information is available upon request.
- The information depicted on these maps represents the results of surveys made on the dates indicated, and can only be considered as indicating the general conditions existing at that time.
