2005	14,065	4.8	-3.0	-3.9	648	0.2	-2.1	0.0
2006	13,754	4.6	-2.2	-3.1	644	0.2	-0.6	0.0
2007	13,299	4.4	-3.3	-4.2

¹ Official tuberculosis mortality statistics were compiled by the National Center for Health Statistics, CDC, National Vital Statistics Reports.

² The large decrease in death rate in 1979 occurred because late effects of tuberculosis (e.g., bronchiectasis or fibrosis) and pleurisy with effusion (without mention of cause) are no longer included in tuberculosis deaths.

Percent change in tuberculosis death rates is calculated with rounded figures. See Technical Notes (page 9).

Note: 1993 to 2007 tuberculosis case counts and rates updated as of April 23, 2008, using Bridged-Race 1990–1999 Intercensal Population Estimates for 1990–1999 (ftp://ftp.cdc.gov/pub/health_statistics/nchs/datasets/nvss/bridgepop/documentationbridged-intercena1.doc) (accessed July 7, 2008) and Annual Estimates of the Population for the United States and States, and for Puerto Rico (July 1, 2000– July 1, 2007) (www.census.gov/popest/states/tables/NST-EST2007-01.xls) (accessed July 7, 2008). Percent-age change results reported to one decimal. Ellipses indicate data not available. Case data after 1974 are not comparable to prior years due to changes in the surveillance case definition that became effective in 1975. See Surveillance Slides #2 and #3.
