EXECUTIVE SUMMARY

This is a report of the tables compiled by 35 Urban Indian Health Programs (UIHPs) as part of their UIHP Common Reporting Requirements (UCRR) for the Indian Health Service (IHS). This reports summarizes the 1999 UCRR data submitted to the IHS. It also contains summary information going back to 1984.

Not all urban programs were able to provide 1999 UCRR data. When such data were unavailable or incomplete, the most recent UCRR data were used. Complete data were unavailable for 1999 for the following seven (7) programs:

- | | |
|-------------|---------------------|
| 1) Lincoln* | 5) Great Falls** |
| 2) Chicago* | 6) Oklahoma City*** |
| 3) Butte* | 7) Tulsa*** |
| 4) Tucson* | |

There are several reasons complete data was not available. Programs denoted by (*) were only able to provide partial data. Wherever possible the partial data was used. Programs denoted by (**) are being reorganized and unable to provide meaningful data for FY 1999. Programs denoted by (***) are funded as demonstration projects and are subject to different reporting requirements.

Several aspects of the UIHP Statistics data collection for FY 1999 have been changed from previous years. Definitions of data elements and service types were modified for better clarity and consistency. Training and technical assistance for the UIHP Statistics data collection was handled primarily by IHS Area Office Urban Coordinators. Data collection and data processing was facilitated by the use of an electronic data worksheet for data submittal to IHS for statistical processing.

The goal of UIHP Statistics data collection changes is improved reliability, consistency, and validity of data. This year's statistics include several disconnects from prior year reports. These disconnects have resulted from changes in definition of service groups and from the correction of some statistical measurements in prior years. The two key statistical changes are the computation of "total project users" and "total services". Future data collection changes will also facilitate improved data analysis to provide early indicators of UIHP service problems or funding issues.

INTRODUCTION

The fiscal year 1999 Urban Indian Health Program tables are a compilation of Urban Indian Common Reporting Requirements Reports (UCRRs) from the Urban Indian Programs. The UCRR data have been analyzed, displayed, and put into these tables to enable a descriptive review of the 35 Urban Indian Health Programs.

The summary tables contain UCRR comparative data going back to 1984.

This year's statistics include several disconnects from prior year reports. These disconnects have resulted from changes in definition of service groups and from the correction of some statistical measurements in prior years.

The two key statistical changes are the computation of "total project users" and "total services". Previously, total project users were summed from users by service group. Henceforth, total project users are summed from users by age. For instance, a single (30 year old) individual may visit a UIHP for medical service, dental service, and community health service. Previously, this person would be counted as a project user three times; once for medical service, once for dental service, and once for community health service. Now, that person will only be counted as part of the 30 year old age group. This change is particularly important for the Tables in Chapter 9.

Previously, total services was the sum of all encounters and ancillary services, such as prescriptions, lab procedures, and images. Ancillary services was included as part of the total of medical encounters. In FY 1998, for instance, the reported 229,475 medical encounters included 62,826 ancillary services. In FY 1999, the total of 127,500 ancillary services are reported distinctly and are not included in sum of total services. This change is evident in Table 1.1, Table 1.6, Table 2.1, and Table 2.5.

This report is organized by a brief description of each clinic information section followed by corresponding tables.

ACKNOWLEDGEMENTS

The UCRR analysis and tables for FY 1999 were completed by Information and Management Technologies, Inc. (I&MT) under contract with the Indian Health Service, Mr. William Dew, Project Officer.

Appreciation is given to the various Urban Indian Health Programs who have responded patiently and effectively to requests to provide their reports. Thanks also to the Indian Health Service Area Coordinators for their assistance in forwarding the data to I&M Technologies, Inc.

1. FUNDING

These tables present the sources of funds for urban Indian programs during FY 1999.

When data were not available, prior period data were used, if possible.

TABLE 1.1 FUNDING AND SERVICES BY YEAR: This table summarizes the IHS and Other funding received by the Urban Indian Health Programs, as well as the total number of services provided, for the period 1984-1999. This table emphasizes the leverage IHS funding has on attracting other sources of funding.

TABLE 1.2 URBAN PROGRAM FUNDING BY SOURCE BY YEAR: This table summarizes the funding by source and by year for the period 1984-1999 for Urban Indian Health Programs. This table presents the amount of funding by IHS, Other Federal, State, County, City, and Other funding sources. "IHS" includes Title V and all other IHS funding. "Other Federal" consists of WIC, Section 330, MCH, and Title X funding. "Other" includes Medicare, Medicaid, patient payments, other 3rd parties, foundation grants, church donations, etc.

TABLE 1.3 DISTRIBUTION OF URBAN PROGRAM FUNDING BY SOURCE BY YEAR: This table summarizes the program funding by source and by year as percentages of the total funding for each Urban Indian Health Program during the period 1984-1999.

TABLE 1.4 FUNDING BY SOURCE BY PROGRAM: This table presents funding by source for the fiscal year of 1999 for each Urban Indian Health Program. The Urban Indian Health Programs are presented on the far left side under their respective IHS Area. The sources of funds are Section 330, MCH, Title X, WIC IHS Other, Other Federal, Medicare, Medicaid, Title XX, Other 3rd Party, Patient Collection, State, County, City, and Other.

TABLE 1.5 FUNCTIONAL COST BY SERVICE TYPE BY PROGRAM: This table presents the functional cost by service type for fiscal year 1999 for each Urban Indian Health Program. Functional service types include Medical, Laboratory (medical), X-Ray (medical), Pharmacy, Dental, Inpatient, Health Education, Nutrition, Mental Health, Allied Health, Community Services, and Substance Abuse.

TABLE 1.6 ENCOUNTERS BY SERVICE TYPE AND BY PROGRAM: This table represents the number of encounters by type of service provided for each Urban Indian Health Program for fiscal year 1999. An encounter is defined as a face-to-face contact between a user and a provider of health care services who exercises independent judgement in the provision of health services to the individual patient. For a health service to be defined as an encounter, it must be documented.

2. URBAN PROGRAM SERVICES BY YEAR

Workload data of types and numbers of services have been collected by IHS on the Urban Indian Health Programs since 1979. Initially these were only occasional estimates undertaken by the programs. The reported services over this time period may seem to decrease, but this is a result of inconsistencies in the way each program defined its services.

Some or all of the UCRR data were missing from the programs listed on page 4. When FY 1999 data were unavailable, FY 1998 data were used.

TABLE 2.1 MEDICAL SERVICES WORKLOAD BY YEAR: This table presents the number of medical services provided by each Urban Indian Health Program during the period 1984-1999.

TABLE 2.2 DENTAL SERVICES WORKLOAD BY YEAR: This table presents the number of dental services provided by each Urban Indian Health Program during the period 1984-1999.

TABLE 2.3 COMMUNITY SERVICES AND ENABLING SERVICES WORKLOAD BY YEAR: This table presents the number of community services and enabling services provided by each Urban Indian Health Program during the period 1984-1999.

TABLE 2.4 OTHER SERVICES WORKLOAD BY YEAR: This table presents the number of allied health services provided by each Urban Indian Health Program during the period 1984-1999. Allied health services includes health education, nutritional services, mental health services, optometry, and alcohol and substance abuse prevention and treatment services.

TABLE 2.5 TOTAL SERVICES WORKLOAD BY YEAR: This table displays the total workload data for each Urban Indian Health Program during the period 1984-1999.

3. REPORTED NON-TITLE V FUNDING SOURCES

TABLE 3.1 REPORTED NON-TITLE V FUNDING BY SOURCE: This table presents the reported program funding for FY 1999, excluding IHS Title V funding. Funding sources are grouped as Federal, State, County, City, and Other.

"Federal" includes Section 330, Title X, WIC, Medicare, IHS Other and Other Federal.

"State" includes MCH, Medicaid, Title XX and State funding.

"Other" includes Other 3rd Parties, Patient Fees and Other.

TABLE 3.2 REPORTED NON-TITLE V FUNDING BY DECISION POINT: Presents the reported program funding for FY 1999, excluding IHS Title V funds. However, these receipts are grouped by source of funding decision point.

"Federal" includes Section 330, IHS Other and Other Federal.

"State" includes MCH, Title XX, WIC and State funding.

"Other" includes Medicaid, Other 3rd Parties, Patient Fees and Other.

5. AVERAGE IHS COST PER INDIAN ENCOUNTER

The number of Indian encounters was estimated as the number of encounters for each service type multiplied by the percent Indian users for that service type.

TABLE 5.1 AVERAGE IHS COST PER INDIAN ENCOUNTER: This table presents the average IHS cost per Indian encounter for FY 1999. The IHS cost per encounter is calculated by summing the estimated Indian encounters for each service type and then dividing the total estimated Indian encounters by the IHS funding received for the year. The estimated IHS cost per encounter will vary among Urban Indian Health Programs due to the types of services offered. On Urban Indian Health Programs providing predominately medical and dental services will have costs per encounter higher than one providing predominately outreach and referral services.

6. PERCENT ADMINISTRATIVE COST

This analysis is used to determine what portion of the costs of operating an urban Indian health center are due to administration as opposed to direct health care expenses. The standard used by IHS is that the percentage be around 20% to 30%. Generally, established Urban Indian Health Centers have a lower percentage, usually around the 30% mark, while the newer Urban Indian Health Programs have a higher administrative cost percentage. This percentage is calculated by dividing the total administrative cost by the total allocated cost for that year. The following proportion is then multiplied by 100 to compute a percentage.

TABLE 6.1 ADMINISTRATIVE COST AS A PERCENT OF AMBULATORY COST: This table presents the grouped frequency distribution of the administrative cost as a percent of the total ambulatory health care costs for FY 1999. This analysis is useful to determine what portion of the total cost for operating an Urban Indian Health Program is attributed to administration. Generally, the ideal percentage should fall between twenty percent (20%) to thirty percent (30%).

TABLE 6.2 ADMINISTRATION AS A PERCENT OF AMBULATORY COST BY YEAR: Table 6.2 presents the administrative costs as a percent of the total ambulatory health care costs for FY 1984 through FY 1999 for each Urban Indian Health Program.

7. RATIO OF INDIAN USERS TO IHS DOLLARS

The ratio of Indian users to IHS dollars is calculated as:

$$\frac{\text{Indian users/total users}}{\text{IHS dollars/total users}}$$

For example, if 75% of the Urban Indian Health Program's users are reported as Indian, and 50% of the program's funds are provided for by IHS, the ratio is 1.50. The greater the value of the ratio of Indian users to IHS dollars, the more favorable the index. A ratio of greater than 1.00 indicates that the Urban Indian Health Program is leveraging non-IHS funding to subsidize health care for American Indians. A ratio of less than 1.00 indicates that some IHS funding is being used to subsidize health care for non-Indians.

TABLE 7.1 RATIO OF INDIAN USERS TO IHS DOLLARS: This table displays the ratio of Indian users to IHS dollars for each Urban Indian Health Program for FY 1999.

8. STAFF PRODUCTIVITY RATIO BY PROGRAM

The calculated staff productivity ratio was first used by IHS in FY 1984 to permit comparison of staff productivity between programs offering different types and amounts of services. The calculated staff productivity ratio is derived by multiplying the **encounter/year rates* by the number and type of providers reported, producing the expected number of encounters. The staff productivity ratio is then calculated for each Urban Indian Health Program as:

$$\frac{\text{Actual Reported Encounters}}{\text{Expected Number of Encounters}}$$

The **encounter/year rates* utilized in this calculation were the same as those used in past years:

Type of Service Provider	<i>*Encounter/Year Rate</i>
Medical Primary Care	4200
Medical Mid-level	2100
Dentists	2600
Dental Hygienist/Oral Therapist	1300
Mental Health	910
Community Service & Other Allied Health	728

If the reported number of encounters is greater than the expected number of encounters, then the staff productivity ratio will be greater than 1.00. If the reported number of encounters is less than the expected number of encounters, then the staff productivity ratio will be smaller than 1.00.

TABLE 8.1 STAFF PRODUCTIVITY RATIO BY PROGRAM: This table presents the calculation of staff productivity ratio for each Urban Indian Health Program for FY 1999.

10. SERVICE UTILIZATION

Service utilization was examined as the average number of encounters per user for each service category. Another measure of service utilization is the percentage of project users who utilized each of the individual service categories. This measure is used, but due to inconsistencies in data reported on unduplicated project users, caution is required in the interpretation of results.

TABLE 10.1 AVERAGE NUMBER OF ENCOUNTERS PER USER BY SERVICE TYPE BY PROGRAM: This table presents the average number of encounters per user by service type by Urban Indian Health Program for FY 1999. These averages are calculated by dividing the number of encounters for each service type by the number of users in the corresponding service type.

TABLE 10.2 PERCENT USERS UTILIZING EACH SERVICE: This table presents the percentage of project users utilizing each service by Urban Indian Health Program for FY 1999. These percents indicate what proportion of the project's annual user base utilize each of the services provided by the Urban Indian Health Program.

TABLE 10.3 PERCENT INDIAN USERS UTILIZING EACH SERVICE: This table presents the percentage of Indian project users utilizing each service type for each Urban Indian Health Program for FY 1999. This number is calculated by dividing the number of Indian service users by the number of Indian project users.

TABLE 10.4 PERCENT NON-INDIAN USERS UTILIZING EACH SERVICE: This table presents the percentage of non-Indian users utilizing each service type for each Urban Indian Health Program for FY 1999. This number is calculated by dividing the number of non-Indian users by the number of total users in that service type.

11. PROVIDER STAFFING AND PRODUCTIVITY

Provider staffing and productivity were examined as the average number of encounters and average number of users per full-time equivalent (FTE) provider by service category. Medical and dental productivity were examined by full-time equivalent medical or dental team, as applicable. In this case the medical midlevel provider and dental hygienist FTE's were calculated as equal to one half FTE physician or dentist in calculating team productivity.

TABLE 11.1 FULL TIME EQUIVALENT STAFFING BY URBAN INDIAN HEALTH PROGRAM: This table presents the full time equivalent staffing for each Urban Indian Health Program for FY 1999. Full time equivalents are calculated on an individual basis by dividing the total number of hours in the reporting period for which the person was compensated by the total number of hours in the reporting period considered by the project to be full time. The total number of hours for which an individual was compensated includes the hours the individual worked and was reimbursed for his/her time, as well as paid leave time (vacation, sick leave, continuing education, trips, etc.).

TABLE 11.2 AVERAGE NUMBER OF USERS PER FULL TIME EQUIVALENT: This table presents the average number of users per full time equivalent provider for each Urban Indian Health Program for FY 1999. This number is calculated by dividing the number of users for each service type by the number of full-time equivalent providers in the same service type.

TABLE 11.3 AVERAGE NUMBER OF ENCOUNTERS PER FULL TIME EQUIVALENT: This table presents the average number of encounters per full time equivalent by service type for each Urban Indian Health Program for FY 1999. This number is calculated by dividing the number of encounters for each service type by the number of full time equivalents for the corresponding service type.

12. COST EFFICIENCY AND ANALYSIS

Cost efficiency was examined as the average cost per encounter by service category and as the average cost per user by service category. The costs in the categories of medical, lab (medical), and medical x-ray are all based on the number of medical encounters, or users, as the case may be.

TABLE 12.1 AVERAGE COST PER ENCOUNTER BY URBAN INDIAN HEALTH PROGRAM: This table presents the average cost per encounter for each service types for each Urban Indian Health Program for FY 1999. Each service type is calculated by dividing the total allocated cost for each health care service type by the number of encounters in the corresponding service type.

TABLE 12.2 AVERAGE COST PER SERVICE USER BY URBAN INDIAN HEALTH PROGRAM: This table presents the average cost per service user for each service type for each Urban Indian Health Program for FY 1999. Each cost is calculated by dividing the total allocated costs for each service type by the number of service users in the corresponding service type.

TABLE 12.3 PERCENTAGE OF FUNCTIONAL COST BY SERVICE TYPE BY URBAN INDIAN HEALTH PROGRAM: This table presents the percentage of functional cost attributed to each service type for each Urban Indian Health Program for FY 1999. This number is calculated by dividing the total allocated costs for each service type by the total health care costs for each Urban Indian Health Program.

13. HOSPITALIZATION

Hospitalization is reported as the number of hospital admissions by Urban Indian Health Program physicians and midlevel practitioners (where allowed), categorized by the type of inpatient service the patient was admitted under, as well as the number of hospital inpatient encounters by physicians and midlevel practitioners.

TABLE 13.1 HOSPITAL PATIENT ADMISSIONS BY TYPE OF SERVICE BY URBAN INDIAN HEALTH PROGRAM: This table presents the number of hospital admissions for each inpatient service, by each Urban Indian Health Program for FY 1999.

TABLE 13.2 HOSPITAL INPATIENT ENCOUNTERS BY TYPE OF SERVICE FOR EACH URBAN INDIAN HEALTH PROGRAM: This table presents the number of hospital encounters by Urban Indian Health Program staff physicians and midlevel providers by service of admission for each Urban Indian Health Program for FY 1999. This does not include non-staff inpatient encounters and admissions.

Type of inpatient services includes the following:

Pediatrics: The clinical service concerned with the diagnosis and nonsurgical treatment of children.

Internal Medicine: The clinical service concerned with the diagnosis and nonsurgical treatment of adults.

Obstetrics: The clinical service concerned with the care and treatment of women during pregnancy, childbirth and postpartum period; does not include gynecology.

Other: All clinical services other than Pediatrics, Internal Medicine or Obstetrics.

14. CLINICAL SERVICES INDICATORS

Compliance with clinical service indicators is measured as the percentage of records sampled which met the UCRR criteria for each of the clinical service indicators. These current clinical service indicators are:

- a) Immunization (24-27 months)
- b) Immunization (6 year olds)
- c) Family Planning Counseling (under 20 years old)
- d) Pap Smear Follow-up
- e) Hypertension Follow-up (10 years and over)
- f) Anemia Screening (24-27 months)
- g) Diabetes Follow-up

TABLE 14.1 SAMPLED SELECTED CLINICAL INDICATORS IN COMPLIANCE: This table presents the percentage of sampled records that are in compliance with UCRR criteria. Records sampled are those records selected from the project's file of 1999 active patients. Active patients are defined as those who have at least one medical encounter 24 months prior to the audit.

Immunization: Successful provision of a series of immunization to children indicates a grantee's commitment to preventive health services for children and its implementation of a successful tracking system. Normal standards for immunization is 90 percent of children ages 24-27 months

15. DEMOGRAPHIC ANALYSIS

Demographic analysis provides age and gender distributions for unduplicated project users by number and percent. These tables can be used for planning, service and staffing predictions. These tables can also be used to compare project user age groups with urbanized area age groups and see to what extent and which age group is making the most use of the health program

TABLE 15.1 AGE DISTRIBUTION OF ALL PROJECT USERS: This table presents the number of project users by age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.2 AGE DISTRIBUTION OF INDIAN PROJECT USERS: This table presents the number of Indian project users by age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.3 AGE DISTRIBUTION OF INDIAN MALE PROJECT USERS: This table presents the number of male project users by age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.4 AGE DISTRIBUTION OF INDIAN FEMALE PROJECT USERS: This table presents the number of female project users by age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.5 PERCENTAGE AGE DISTRIBUTION OF ALL USERS: This table presents the percentage of total project users in each age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.6 PERCENTAGE AGE DISTRIBUTION OF INDIAN PROJECT USERS: This table presents the percentage of Indian project users in each age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.7 PERCENTAGE AGE DISTRIBUTION FOR MALE USERS: This table presents the percentage of male project users in each age interval for each Urban Indian Health Program for FY 1999.

TABLE 15.8 PERCENTAGE AGE DISTRIBUTION OF FEMALE USERS: This table presents the percentage of female project users in each age interval for each Urban Indian Health Program for FY 1999.

16. COMMUNITY PENETRATION

Community penetration refers to the extent that members of the American Indian/Alaska Native community utilize the Urban Indian Health Programs. Penetration percentages are based on 1990 census data and the 1999 utilization data from Table 9.4. Community penetration is the result of many factors, including the number of years the Urban Indian Health Program has been providing services, the range and types of services available, the amount of funding available, the staffing available, etc.

TABLE 16.1-URBAN INDIAN POPULATION IN URBAN AREA VS. PROJECT USERS:

This table presents the total project users, total urban Indian population and percentage of the urban Indian population served. The percentage Indian population served is calculated by dividing total Indian project users by the total urban Indian population, which is found in 1990 Census figures for urbanized areas (or cities, if not an urbanized area).

17. FINANCIAL MANAGEMENT

Financial management examines the amount of changes, collections and adjustments for services.

TABLE 17.1 CHARGES, COLLECTIONS AND ADJUSTMENTS: This table presents the charges, collections and adjustments for each Urban Indian Health Program for FY 1999.

Charges: This term refers to the gross amount of charges and premium for all services rendered during the reporting period. Full charges are calculated on a 100% pay basis, prior to any adjustments, for all services provided.

Collections: This term refers to the dollar amount collected during the reporting period, regardless of when the service was provided.

Adjustments: This term refers to the accounting transactions reflecting the difference between the full charges amassed by the project versus the amount that was actually collected and/or the amount expected to be received in the near future (accounts receivable).

TABLE 17.2 ADJUSTMENTS BY TYPE: This table presents the adjustments by type for each Urban Indian Health Program for FY 1999. There are four categories of adjustments:

a) disallowances and reductions (contractual adjustments): The difference between the project's customary charges and the amount allowed by third party payers for the billed services.

b) sliding payment scale adjustments: Reductions to full charges, or to the amounts transferred to patient fees from third party payers, based upon the project's sliding fee scale.

c) bad debt write off: The amount of net charges (gross charges) less disallowances, reductions and sliding fee scale adjustments which are not expected to be collected.

d) Other: Any other type of adjustment, such as recovery of bad debt, staff discounts, free immunizations, senior discounts, etc.

TABLE 17.3 ADJUSTMENTS AS A PERCENT OF FULL CHARGES: Presents the adjustments as a percentage of full charges by collection source for each Urban Indian Health Program for FY 1999.

TABLE 17.4 FULL CHARGES BY SOURCE: This table presents the full charges by source for each Urban Indian Health Program for FY 1999.
