A Report from the Economic Research Service

www.ers.usda.gov

Fruit and Tree Nuts Situation and Outlook Yearbook 2007

Susan Pollack and Agnes Perez

Abstract

Total fruit and tree nut production, at 30.2 million tons, was down 4 percent between 2005 and 2006 and the lowest since 1991. Smaller noncitrus production offset a 1-percent bigger citrus crop and a 9-percent bigger tree nut crop. The value of the 2006 fruit and tree nuts crops reached a record high of \$16.7 billion, 2 percent above 2005. The citrus crop was valued at \$2.7 billion, noncitrus at \$10.5 billion, and tree nuts at \$3.4 billion. Returns were up for citrus and noncitrus production, both setting record-high values, but were down for tree nuts. U.S. fruit consumption averaged 275.9 pounds per person (fresh-weight equivalent) in 2006, down 2 percent from 2005.

Americans consumed fewer citrus and noncitrus fruit products in 2006, but increased their consumption of tree nuts. Consumption increased for fresh fruit, but decreased for fruit juice as well as for canned fruit. It remained unchanged at an average of 10 pounds per person for dried fruit for both 2005 and 2006. Tree nut consumption rose 22 percent to 3.36 pounds per person (shelled basis) in 2006/07, but was the same as in 2004/05. Americans consumed more almonds, hazelnuts, walnuts, and other nuts—mostly imports such as cashews, Brazil nuts, and pine nuts—but fewer pecans and pistachio nuts. Macadamia nut consumption remained unchanged.

Keywords: fruit, tree nuts, noncitrus, citrus, utilized production, crop value, imports, exports, stocks, pack, price, consumption, fresh, frozen, canned, juice, dried

Approved by the World Agricultural Outlook Board. Summary released October 30 2007. The next *Fruit and Tree Nuts Outlook* newsletter is scheduled for release on November 28, 2007. Summaries and text of Situation and Outlook reports may be accessed electronically; for details, call (202) 694-5050.

Summary

Fruit-Bearing Acreage and Production Down in 2006; Crop Value Up

- Bearing acreage dropped 7 percent for citrus and almost 1 percent for major noncitrus crops between 2005 and 2006, but increased 2 percent for miscellaneous noncitrus crops and 1 percent for tree nuts (table a-2).
 - Bearing acreage declined for all major citrus fruit, mostly led by the loss of acreage in Florida (table a-4 and various C section tables). Orange acreage fell in both Florida and California. California growers are removing Valencia orange trees due to weak demand for the fruit. Most of the grapefruit acreage loss occurred in Florida, with California and Arizona acreage declining slightly. Grapefruit bearing acreage has remained constant in Texas since 2002/03 at 18,500 acres. Lemon acreage declined by 1,000 acres in Arizona, but California's acreage remaining unchanged between 2005 and 2006 at 44,000 acres, and accounted for 77 percent of the total. The 5-percent decline in total tangerine acreage was a result of fewer acres in Florida, even though California continues to plant more acres of different tangerine varieties that are showing strong popularity among American consumers. These varieties, such as clementines, are at present still mostly imported.
 - Among noncitrus fruit crops, bearing acreage fell between 2005 and 2006 for apples, peaches, pears, tart cherries, plums/prunes, apricots, figs, Hawaiian pineapples, and kiwifruit. Some of the decline was offset by increased bearing acreage of sweet cherries, avocados, bananas, dates, and Hawaiian papaya. The number of bearing acres remained relatively unchanged for grapes, nectarines, and cranberries.
- Total fruit production declined 4 percent in 2006 from 2005, totaling 30.2 million tons, the smallest quantity produced since 1991 (table a-3). While citrus production was up 1 percent in 2006, it was still low relative to recent years, as Florida's trees still felt the effects of the hurricanes in 2004 and 2005 and diseases, such as citrus canker and citrus greening, continued to hinder Florida's production. Noncitrus production fell 8 percent in 2006 from 2005, with 16.9 million tons produced. Smaller peach, grape, tart cherry, apricot, fig, Hawaiian pineapple, avocado, nectarine, kiwifruit, and papaya crops contributed to the decline in noncitrus production (table a-5).
- Tree nut production increased 9 percent between 2005 and 2006 to 1.6 million tons (in-shell basis) (table a-3). Almond production set a new record high at 953,000 tons (in-shell basis), 23 percent above 2005 and 2 percent above the last record crop in 2002. Production was also higher in 2006 for hazelnuts and macadamia nuts, but down for pecans, walnuts, and pistachio nuts.

- The value of the 2006 fruit and tree nuts crops reached \$16.7 billion, 2 percent above 2005 and the highest on record (table a-3). The value of production rose for citrus and noncitrus fruit, but fell for tree nuts. Very strong demand for citrus both in the fresh and processing markets drove crop value up 19 percent to \$2.7 billion, a record high.

Grower and Consumer Prices Up in 2006

- In 2006, the index of prices received by fruit and tree nut growers reached 156 (1990-92=100), 19 percent above 2005 and the highest on record (table a-6). Among the major fruit used to create the index, smaller quantities of apples, peaches, grapes, and oranges helped drive up grower prices for these commodities. While production was up for both pears and strawberries in 2006, grower prices for both of these commodities averaged higher than the previous year due to strong demand for them in response to lower supplies of many other fruit. While prices for grapefruit, lemons, and tangerines were down from 2005, they were still relatively high compared with previous years. The very high citrus grower prices in 2005 resulted from 2 consecutive years of poor crop years in Florida from hurricane damage.
- Partially in response to higher grower prices in 2006, the Consumer Price Index for fresh fruit rose 6 percent from 2005 to 315.2 (1982-84=100) (table a-6). The CPI also was higher for frozen fruit and juices and for processed fruit.
 - Consumers paid more at retail for all major fresh fruit surveyed by the Bureau of Labor Statistics (table a-7). Prices increased more than 10 percent between the 2 years for lemons, grapefruit, Valencia oranges, and Red Delicious apples.

Grower Cash Receipts Fall in 2006 from Record High in 2005

- While U.S. cash receipts for fruit and tree nuts fell 4 percent in 2006 from the record high in 2005, they still totaled \$17 billion, the second highest on record (table a-8). Receipts for grapefruit returned to a more average level of \$315 million, but were less than half the value received from the 2005 crop. Orange and tangerine receipts also declined in 2006, but not by the same degree. While cash receipts fell 8 percent for grape growers in 2006, to \$3.3 billion, grapes still accounted for about a fifth of total cash receipts. Almond cash receipts fell from \$2.5 billion in 2005 to \$2.0 billion in 2006, a 19-percent decline. On the other hand, cash receipts increased 22 percent for apple producers to \$2.1 billion, making them the second-highest ranking in terms of cash receipts after grapes, and replacing almond producers who ranking dropped from second in 2005 to third in 2006. Rounding out the top 5 were orange producers, with cash receipts at \$1.8 billion, 8 percent less than in 2005, and strawberry growers, with cash receipts of \$1.5 billion, 9 percent above the previous year and the highest on record.

Per Capita Fruit Consumption Down in 2006; Nut Consumption Up

- Total per capita fruit and nut consumption average 275.9 pounds in 2006, down 2 percent from 2005, and the lowest since 1995 (table a-1). The decline was led by reduced consumption of most grape and orange products, 2 of the most popular fruit in the American diet. Contributing to the lower use for these fruit was lower production in 2006 which was not fully compensated for by imports.
 - **Fresh fruit:** Per capita fresh fruit consumption averaged 100.9 pounds in 2006, 1 percent above the previous year (table f-36). Americans ate slightly more fresh noncitrus fruit during this period, but slightly less citrus due to a smaller orange crop in California and smaller grapefruit crops in Florida and California. Noncitrus fruit consumption averaged 79.3 pounds per person in 2006, the third highest on record, and 2 percent above 2005. Strong demand for apples and pears, blueberries, strawberries, cherries, kiwifruit, and tropical fruit—mangoes, papayas, and pineapple helped offset weak demand for fresh table grapes, peaches and nectarines, and plums and prunes. Consumption of bananas, the No.1 fresh fruit consumed in the United States, declined fractionally in 2006.
 - **Canned fruit:** Canned fruit per capita consumption averaged 13.12 pounds (processed weight) in 2006, 8 percent lower than 2005 (table f-37). Consumption declined for almost all the canned-fruit products, except apples, pears, pineapples, and plum/prunes. Although consumption of these four canned fruit products were higher than in 2005, only canned pineapple consumption was above 2004. Demand for most canned-fruit products has been declining since 2000/01, as consumers have shown increased preference for fresh and other processed-fruit products such as juices and some dried fruit.
 - **Frozen fruit:** Although frozen fruit consumption declined 8 percent in 2006 from 2005, at an average of 4.03 pounds (processed weight) per person, demand for frozen fruit appears to continue to grow in the United States as it has throughout the 2000s (table f-38). Berries, and strawberries in particular, make up the bulk of frozen fruit. Although strawberry production was up in 2006, fewer strawberries went to processing. With beginning stocks lower than anytime since 1999, a 12-percent increase in imports was not sufficient to drive up supplies above last season, contributing to a consumption decline of 10 percent.
 - **Dried fruit:** Americans consumed an average of 2.18 pounds (processed weight) of dried fruit in 2006, 5 percent less than in 2005 (table f-39). Raisins account for about two-thirds of dried fruit consumption, rising to almost 70 percent of the total in 2006. Raisin demand was strong, and was the only grape product to show an increase in demand for the year. While raisin demand has not been as strong in recent years as it was in the late 1980s, early

1990s when it was around 2 pounds per person each year, demand appears to have stabilized at around 1.5 pounds per person annually over the past 5 years. Much of the decline in dried fruit consumption for the year appears to be due to weak demand for prunes (dried plums) (f-34). While U.S. production of prune variety plums was up in 2006, per capita consumption was half the amount of 2005. Although both imports and beginning stocks were down for 2006/07, total supply was still above that of the past 2 seasons. Exports were also strong, but, despite all these factors, ending stocks were the biggest since 2000/01, indicating supply was not a factor in reduced consumption. Therefore the decline in per capita consumption from 0.35 pound in 2005, (and an average of 0.42 pound of the 5-year period 2001/02-2005/06) to 0.17 in 2006 could be seen as largely due to weak demand.

- **Fruit juice:** Per capita fruit juice consumption averaged 7.8 single-strength equivalent (sse) gallons in 2006, 2 percent more than in 2005, but below any other year since 1991/92 (table f-40). Citrus juices accounted for 59 percent of juice consumption, down from 69 percent in 2000/01. Orange juice consumption, the No. 1 fruit juice consumed in the United States, fell 6 percent in 2006 to 4.13 sse gallons per person, the third consecutive annual decline, and over a gallon less per person than in 2000/01. At the same time, grapefruit juice consumption, which has been declining steadily since 2000/01, increased 45 percent in 2006 from 2005, to an average of 0.29 sse gallon per person.
 - Noncitrus juice consumption increased 12 percent in 2006 to an average of 3.21 sse gallons per person, with apple juice accounting for 69 percent of the total. Much of the increase in supply available for domestic consumption came from imported apple juice. In 2006, imports accounted for 80 percent of U.S. apple juice consumption, up from 76 percent in 2005 and an average of about 60 percent throughout the 1990s.
- **Tree nuts:** In 2006, U.S. tree nut consumption increased to 3.36 pounds per person, 22 percent higher than 2005, but about the same as in 2004. Increased availability of many domestically produced tree nuts, due to the “on cycle” of many of the crops, contributed to the increase in consumption. Large supplies of imported tree nuts, in particular cashews, brazil nuts, and pine nuts (pignolias), which together accounted for 29 percent of all tree nut consumption for the year, were also an important factor in the increased consumption for 2006.

Glossary of Terms

Brix: The concentration of soluble solids in juice, mostly sugar, but also includes salts, protein, and acid content. The denser the juice the higher the degrees Brix. For example: frozen concentrated orange juice is stored and often shipped at 66 degrees Brix, reconstituted with water to 42 degrees Brix and canned for retail sale in the popular 8- to 16-ounce cans found in freezers at retail level, and further reconstituted to 11.8 degrees Brix for consumption. Juice in its natural state, not-from concentrate orange juice, is about 11.8 degrees Brix.

Cash receipts: The value of commodity marketings during the calendar year, irrespective of the year of production. For program crops, also includes net Commodity Credit Corporation loans (there are none for fruit and tree nuts).

C.I.F. value: (Cost, insurance, and freight). Terms of sale whereby the seller's (exporter) price includes the cost of the goods being sold and all transportation charges, including insurance expenses, to the destination point (importer).

Constant 1996 dollars: Expression of value in terms of 1996 purchasing power. Frequently referred to as deflated or real dollars.

Cwt: Abbreviation for hundredweight, a unit of measure equal to 100 pounds.

Dumping: The sale of a commodity in a foreign market at less than fair market value.

Equivalent on-tree returns: Citrus price calculated at the on-tree level by deducting the costs of hauling, picking, sorting, grading, packing, cooling, marketing, and other costs from the base price growers receive at the processing plant or packinghouse door. In some cases, this results in negative returns.

Farm weight: The raw or unprocessed weight of a product in fresh form prior to any processing; also called fresh weight, field run, or orchard run.

F.A.S. value: (free alongside ship). A price quotation that includes all costs of transportation and delivery of the goods to the dock alongside the ship (within reach of the ship's tackle).

F.o.b. (free on board) shipping-point price: The average, unweighted unit price received by the shipper or grower-shipper primarily for sales in carload or truckload quantities, but also including mixed loads. (Basically the price of the product packed and ready to be shipped.)

Fresh-market fruit: Sold primarily as fresh.

Grower price: The average price received by producers from the first level of sales for the commodity, also called returns to grower. The grower price includes all grades and qualities. For citrus fruit, the grower price is the equivalent on-tree price or return.

Hectoliter: A liquid unit of measure equal to 26.41721 gallons (single-strength equivalent). A hectoliter equals 100 liters.

Loss and exempt: The difference between total production and marketable production. Production not used for human consumption due to poor quality or use of the product for industrial purposes, such as crushing nuts for oil, or for animal feed.

Liter: A liquid unit of measure equal to 0.2641721 gallons (single-strength equivalent).

Marketing spread: The difference between the retail price and the grower return.

Marketing year: A 12-month period beginning the month when harvesting of a crop normally begins. Marketing years vary by commodity.

Metric ton: A unit of measure equal to 2,204.623 pounds or 1.102311 short tons. A metric ton of orange juice is stored at 65 degrees Brix. To convert to single-strength equivalent, the number of tons is multiplied by 1,405.88.

Pack: The quantity of fresh or processed product placed in containers (e.g., cans). Generally referred to as the output of a processing industry (e.g., frozen pack of concentrated orange juice).

Packinghouse door price: The price growers receive for their fruit when delivered to the packinghouse (the price before costs are deducted).

Per capita use (consumption): A measure of commodity disappearance on a per person basis. Equal to total supply (production plus imports, plus beginning stocks) less use (exports, shrink and loss, and ending stocks) divided by total U.S. population (including military).

Processing fruit: Commodities sold primarily to processors; including (but not limited to) oranges, grapefruit, lemons, grapes, apples, apricots, cherries, peaches, plums, pears, pineapple, blueberries, strawberries, raspberries, cranberries, and olives.

Product weight: The weight of a product in its final packaged form. For example, the weight of the contents of a can of peaches.

Pounds solids: The total dissolved solids in citrus, usually measured as pounds solids per box. In Florida, payments for oranges sold for juice are based on the pounds solids per box, calculated by multiplying the amount of juice per box of oranges by the Brix level of the juice.

Retail price: The average price consumers pay for a product at the retail level—grocery stores, supermarkets, convenience stores.

Season-average price: Average price received by the grower, weighted by quantity marketed.

Shipments: Quantity of produce marketed from major production areas.

Single-strength equivalent: A measure for juice in its consumable form. Juice at 11.8 degrees Brix.

Short ton: A unit of measure equal to 2,000 pounds.

Tree nuts: Hard shelled dried fruit or seed with separable rind or shell and edible kernels that grow on trees. Tree nut varieties grown for commercial production in the United States include: almonds, hazelnuts, macadamia nuts, pecans, pistachio nuts, and walnuts.

Tropical fruit: Fruit grown in tropical climates, limited in the United States to southern Florida, California, and Hawaii; includes bananas, pineapple, guavas, papayas, mangoes.

Value of production: The value of commodities produced during the crop year. Calculated as production times the marketing year average price. May be equal to cash receipts when the crop year for the fruit runs from January through December.

CONVERSION FACTORS

1 metric ton = 1.102311 short tons

1 metric ton = 2,204.623 pounds

1 metric ton = 1,000 kilograms

1 kilogram = 2.204623 pounds

1 single-strength equivalent (sse) gallon = 11.8 degrees Brix

1 liter = 0.2641721 sse gallons

1 hectoliter = 26.41721 sse gallons

1 hectoliter = 100 liters

Frozen concentrated orange juice:

1 gallon at 42 degrees Brix = 4.0389 sse gallons

1 metric ton at 65 degrees Brix = 1,405.88 sse gallons

Frozen concentrated grapefruit juice:

1 gallon 40 degrees Brix = 3.81341 sse gallons

C-12. Chilled grapefruit juice: Processors' stocks, pack supplies, and movement, Florida, 1985/86 to date	82

Lemons:

C-13. Lemons: Acreage, yield per acre, and production, by State, 1980/81 to date	83
C-14. Lemons: Utilization of production, by State, 1980/81 to date	84
C-15. All lemons: Equivalent-on-tree returns, by State, 1980/81 to date	85
C-16. All lemons: Monthly equivalent-on-tree returns received by growers, Arizona, 1980/81 to date.....	86

C-17. All lemons: Monthly equivalent-on-tree returns received by growers, California, 1980/81 to date	87
C-18. All lemons: Monthly equivalent-on-tree returns received by growers, United States, 1980/81 to date	88
Oranges:	
C-19. Oranges: Bearing acreage and yield per acre, by State, 1980/81 to date	89
C-20. Oranges: Production, by State, 1980/81 to date	90
C-21. Oranges: Utilization of production, by State, 1980/81 to date	91
C-22. All oranges: Equivalent-on-tree returns, by State, 1980/81 to date	92
C-23. All oranges: Monthly equivalent-on-tree returns received by growers, Arizona, 1980/81 to date.....	93
C-24. All oranges: Monthly equivalent-on-tree returns received by growers, California, 1980/81 to date	94
C-25. All oranges: Monthly equivalent-on-tree returns received by growers, Florida, 1980/81 to date.....	95
C-26. All oranges: Monthly equivalent-on-tree returns received by growers, Texas, 1980/81 to date	96
C-27. All oranges: Monthly equivalent-on-tree returns received by growers, United States, 1980/81 to date	97
C-28. Processed oranges: Florida, 1980/81 to date	98
C-29. Frozen concentrated orange juice: Processors' stocks, pack, supplies, and movement, Florida, 1980/81 to date.....	99
C-30. Chilled orange juice: Processors' stocks, pack, supplies, and movement, Florida, 1985/86 to date	100

BERRIES

Blackberries:

D-1. Blackberries: Commercial acreage, yield per acre, production, and season-average grower price, Oregon and Washington, various years to date	101
--	-----

Blueberries:

D-2. Blueberries: Commercial acreage, yield per acre, production, and season-average grower price, by State, various years to date	102
--	-----

Boysenberries and loganberries:

D-3. Boysenberries and loganberries: Commercial acreage, yield per acre, production, and season-average grower price, California and Oregon, various years to date	106
--	-----

Black raspberries:

D-4. Black raspberries: Commercial acreage, yield per acre, production, and season-average grower price, Oregon and Washington, 1980 to date	108
--	-----

Red raspberries:

D-5. Red raspberries: Commercial acreage, yield per acre, production, and season-average grower price, Oregon and Washington, 1980 to date	109
--	-----

Raspberries:

- D-6. Raspberries: Acreage harvested, yield per acre, utilized production, grower price, and value, California, 1992 to date 110

Cranberries:

- D-7. Cranberries: Acreage harvested, yield per acre, production, utilization, season-average grower price, and value, United States, 1980 to date 111

Strawberries:

- D-8. Strawberries: Acreage, production, season-average grower price, and value, United States, 1980 to date 112
- D-9. Strawberries, fresh market and processing: Production, season-average grower price, and value, United States, 1980 to date 113
- D-10. Strawberries, fresh: Monthly prices received by growers, United States, 1980 to date 114

TREE NUTS**General:**

- E-1. All tree nuts: Bearing acreage, United States, 1980/81 to date 115
- E-2. All tree nuts: Gross return per bearing acre, United States, 1980/81 to date 116
- E-3. All tree nuts: Utilized production (shelled basis), United States, 1980/81 to date 117
- E-4. All tree nuts: Season-average grower prices received, United States, 1980/81 to date 118
- E-5. All tree nuts: Value of production, United States, 1980/81 to date 119
- E-6. All tree nuts (shelled basis): Supply and utilization, United States, 1980/81 to date 120

Almonds:

- E-7. Almonds: Acreage, yield per acre, production (shelled basis), season-average grower price, and value, California 1980 to date 121
- E-8. Almonds: Supply and utilization (shelled basis), 1980/81 to date 122

Hazelnuts (filberts):

- E-9. Hazelnuts (filberts): Bearing acreage and yield per acre (in-shell), by State, 1980 to date 123
- E-10. Hazelnuts (filberts): Production (in-shell), season-average grower price, and value, by State, 1980 to date 124
- E-11. Hazelnuts (filberts): Supply and utilization (shelled basis), 1980/81 to date 125

Macadamia nuts:

- E-12. Macadamia nuts: Acreage, yield per acre, production (in-shell), season-average grower price, and value, Hawaii, 1980 to date 126

Pecans:

- E-13. Pecans: Production (in-shell), season-average grower price, and value, United States, 1980 to date 127
- E-14. Pecans: Supply and utilization (shelled basis), 1980/81 to date 128

Pistachios:

- E-15. Pistachios: Production (in-shell), season-average grower price, and value, California, 1980 to date 129

E-16.	Pistachios: Supply and utilization (shelled basis), 1980/81 to date.....	130
Walnuts:		
E-17.	Walnuts (English): Production (in-shell), season-average grower price, and value, California, 1980 to date.....	131
E-18.	Walnuts (English): Supply and utilization (shelled basis), 1980/81 to date	132

PER CAPITA CONSUMPTION

F-1.	Fresh apples: Supply and utilization, 1980/81 to date.....	133
F-2.	Fresh apricots: Supply and utilization, 1980/81 to date	134
F-3.	Fresh avocados: Supply and utilization, 1980/81 to date	135
F-4.	Fresh bananas: Supply and utilization, 1980 to date	136
F-5.	Fresh blueberries: Supply and utilization, 1980 to date	137
F-6.	Fresh grapes: Supply and utilization, 1980/81 to date.....	138
F-7.	Fresh kiwifruit: Supply and utilization, 1988 to date	139
F-8.	Fresh mangoes: Supply and utilization, 1980 to date	140
F-9.	Fresh papayas: Supply and utilization, 1980 to date	141
F-10.	Fresh peaches and nectarines: Supply and utilization, 1980 to date.....	142
F-11.	Fresh pears: Supply and utilization, 1980/81 to date.....	143
F-12.	Fresh pineapples: Supply and utilization, 1980/81 to date	144
F-13.	Fresh raspberries: Supply and utilization, 1980 to date.....	145
F-14.	Fresh strawberries: Supply and utilization, 1980 to date.....	146
F-15.	Fresh grapefruit: Supply and utilization, 1980/81 to date	147
F-16.	Fresh lemons: Supply and utilization, 1980/81 to date.....	148
F-17.	Fresh limes: Supply and utilization, 1980/81 to date	149
F-18.	Fresh oranges: Supply and utilization, 1980/81 to date.....	150
F-19.	Fresh tangerines and tangelos: Supply and utilization, 1980/81 to date	151
F-20.	Canned apples: Supply and utilization, 1980/81 to date.....	152
F-21.	Canned apricots: Supply and utilization, 1980/81 to date	153
F-22.	Canned cherries, sweet: Supply and utilization, 1980/81 to date	154
F-23.	Canned cherries, tart: Supply and utilization, 1980/81 to date	155
F-24.	Canned olives: Supply and utilization, 1980/81 to date	156
F-25.	Canned peaches: Supply and utilization, 1980/81 to date	157
F-26.	Canned pears: Supply and utilization, 1980/81 to date	158
F-27.	Canned pineapples: Supply and utilization, processed- weight basis, 1980 to date	159
F-28.	Canned plums: Supply and utilization, 1980/81 to date	160
F-29.	Apple juice and cider: Supply and utilization, 1980/81 to date	161
F-30.	Grape juice: Supply and utilization, 1980/81 to date	162
F-31.	Grapefruit juice: Supply and utilization, 1980/81 to date.....	163
F-32.	Orange juice: Supply and utilization, 1985/86 to date	164
F-33.	Pineapple juice: Supply and utilization, 1980 to date.....	165
F-34.	Dried plums (prunes): Supply and utilization, 1980/81 to date	166
F-35.	Raisins: Supply and utilization, 1980/81 to date	167
F-36.	Fresh fruit: Per capita consumption, 1980 to date	168
F-37.	Canned fruit: Per capita consumption, product-weight basis, 1980/81 to date	169
F-38.	Frozen fruit: Per capita consumption, product-weight basis, 1980 to date	170

F-39.	Dried fruit: Per capita consumption, product-weight basis, 1980/81 to date	171
F-40.	Selected fruit juices: Per capita consumption, 1980/81 to date	172
F-41.	Per capita consumption of selected noncitrus fruit, fresh- weight equivalent, 1980/81 to date	173
F-42.	Per capita consumption of citrus fruit, fresh-weight equivalent, 1980/81 to date.....	174
F-43.	Selected fruit: Per capita consumption, fresh-weight equivalent, 1980 to date.....	175
F-44.	Tree nuts (shelled basis): Per capita consumption, 1980/81 to date	176
F-45.	Total U.S. population	177

TRADE

General:

G-1.	Volume of U.S. imports of selected commodities from top countries, 1996-2006	178
G-2.	Volume of U.S. exports of selected commodities to top countries, 1996-2006	183

Fruit:

G-3.	U.S. fresh-market fruit imports, monthly, 2006	187
G-4.	U.S. fresh-market fruit imports, monthly, 2005	188
G-5.	U.S. fresh-market fruit imports, monthly, 2004	189
G-6.	U.S. fresh-market fruit exports, monthly, 2006.....	190
G-7.	U.S. fresh-market fruit exports, monthly, 2005.....	191
G-8.	U.S. fresh-market fruit exports, monthly, 2004.....	192

Fruit juice:

G-9.	U.S. fruit juice trade, monthly, 2006	193
G-10.	U.S. fruit juice trade, monthly, 2005	194
G-11.	U.S. fruit juice trade, monthly, 2004	195

Imports as a share of domestic consumption:

G-12.	Fresh fruit	196
G-13.	Canned fruit	197
G-14.	Frozen fruit	198
G-15.	Fruit juice and wine	199
G-16.	Dried fruit	200

Table A-1--U.S. per capita use of selected, commercially produced, fresh, and processing fruits and tree nuts, 1976 to date 1/

Crop	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985

1/ Data may not match other tables due to rounding. Year reflects end of harvest for citrus and beginning year of harvest for noncitrus. 2/ Method for calculating orange juice changed in 1987. 3/ Includes tangerines, tangelos, other mandarins, and limes. 4/ Includes nectarines. 5/ Does not include small quantities of dried and other processed products. 6/ Includes apricots, blueberries, cranberries, kiwifruit, mangoes, papayas, and plums and prunes. 7/ Includes apricots and plums and prunes.

8/ Includes blackberries, blueberries, raspberries, boysenberries, loganberries and apricot. 9/ Includes prunes and cranberries. Estimates for cranberries begin in 1989.

10/ Includes apricots, dates, figs, peaches, pears, and plums and prunes. 11/ Shelled basis. 12/ Includes hazelnuts, macadamias, pistachios, Brazil nuts, cashews, and mixed nuts.

1/ Includes purees of apples, apricots, bananas, blackberries, black and red raspberries, boysenberries, cherries, elderberries, loganberries, nectarines, peaches, plums, strawberries, cantaloupes, grapes, melons, blueberries, cranberries, guavas, kiwifruit, marionberries, passion fruit, prunes, pears, and gooseberries. 2/ Includes cranberries, gooseberries, marionberries, melon balls, mixed fruit, Montmorency cherries, elderberries, Morello cherries, grapes and pulp (1975 and 1984 only), pears, olallieberries, cantaloupes, crabapples, pineapples, guavas, currants, lemons, oranges, melons, kiwifruit and passion fruit, avocados, strawberry preserves, and watermelons. 3/ Due to lack of industry disclosure, tart cherries are included in miscellaneous fruits and berries. Beginning in 2000, estimates are from the National Agricultural Statistics Service, U.S. Department of Agriculture (NASS, USDA).

4/ Included in miscellaneous fruit and berries. 5/ Estimates derived by the Economic Research Service (ERS), U.S. Department of Agriculture, except for blueberries, sweet and tart cherries, peaches, plums and prunes, miscellaneous fruit and berries, and noncitrus fruit purees in 2004.

6/ Beginning 2002, estimates from NASS, USDA. 7/ NASS estimates on the quantity of apricots produced for freezing used by ERS to derive the frozen pack estimate was not reported to avoid disclosure of individual operations.

1/ National Agricultural Statistics Service (NASS) began reporting "limited" and "undersized" as separate categories in 1990 and made estimates for 1988 and 1989. All data since 1988 are as reported by NASS. 2/ Mostly canned, except for 1980 when use of limited-size fruit in canned ripe olives was not permitted. Reported by California Olive Committee for 1976 to 1987. 3/ "Limited and undersized" reported by NASS, minus "limited size" reported by California Olive Committee for 1976 to 1987. Includes undersized and culled.

Sources: USDA, National Agricultural Statistics Service, *Noncitrus Fruits and Nuts Summary*, various issues; and California Olive Committee.

NA= Not available. 1/ Small quantities of processed blueberries are included in fresh to avoid disclosure of individual operations. 2/ Estimates began in 2005.

3/ Maine produces wild blueberries, other States cultivated. Beginning in 1988 through 1996, data for wild blueberries are from the New England Agricultural Statistics Service.

Data prior to 1988 are from the North American Blueberry Council. 4/ Includes small amounts from Indiana prior to 1992. 5/ Estimates began in 2006.

Sources: USDA, National Agricultural Statistics Service, Noncitrus Fruit and Nuts Summary, various issues; prior to 1992, data from National Agricultural Statistics Service, New England, Oregon, and Washington Field Offices.

NA=Not available. 1/ Cranberries paid for by processors and lost because of dehydration and berry breakdown after delivery.

2/ 1980-86 prices represent equivalent returns at first delivery point, screened basis of utilized production. Beginning 1987, prices are a weighted average of co-op and independent sales. Co-op prices represent pool proceeds less returns for processing non-cranberry products, capital stock dividends, capital stock retains, and other retains. 3/ 1 barrel = 100 pounds.

1/ Conversion factors from in-shell to shelled basis varies year to year for production, stocks, and exports, and were 0.45 in 1996/97, 0.44 in 1997/98, 0.45 in 1998/99, 0.40 in 1999/2000, 0.44 in 2000/01, 0.43 in 2001/02, 0.45 in 2002/03, 0.42 in 2003/04, 0.44 in 2004/05, 0.44 in 2005/06, and 0.43 in 2006/07.

For imports, the conversion factor was a constant 0.50. 2/ Season begins in October as of 1989, prior to 1989 season began in July.

3/ Preliminary estimates.

									0.53

1/ Conversion factors from in-shell to shelled basis varies year to year for production, stocks, and exports, and were 0.41 in 1996/97, 1997/98, and 1998/99, 0.42 in 1999/2000, 0.43 in 2000/01, 0.42 in 2001/02, and 0.43 in 2002/03, 2003/04, and 2004/05, 0.45 in 2005/06, and 0.43 in 2006/07.

For imports, the conversion factor was a constant 0.35. 2/ Season begins in August. 3/ Inedibles and noncommercial usage.

4/ Preliminary estimates.

NA= Not available. 1/ Totals in this table may vary from table A-1 due to rounding.

2/ All noncitrus fruit data are on calendar-year basis, except for apples (year begins in August of the year shown), grapes (since 1990, year begins in May; prior to 1990, year begun in July), and pears (year begins in July). For oranges, Temples, tangerines, and tangelos, years begin in November, grapefruit in September, and lemons in August of the prior year. Lime year begins in April of the year shown. 3/ Some figures may not add due to rounding. 4/ Preliminary.
