Re: POA-2004-433-1
Port St. Nicholas

Attn: Robert W. Jobson

Dear Colonel Gallagher:

The National Marine Fisheries Service (NMFS) has reviewed the above referenced proposal by Mr. James Seley to construct a 40-foot by 16-foot floating dock held in place by two galvanized steel pilings and a 98-foot by 8-foot walkway supported on pressure-treated creosote pilings in Port St. Nicholas.

Section 305(b) of the Magnuson-Stevens Fishery Conservation and Management Act requires Federal agencies to consult with NMFS on all actions that may adversely affect Essential Fish Habitat (EFH). NMFS is required to make conservation recommendations, which may include measures to avoid, minimize, mitigate or otherwise offset adverse effects. The Alaska Department of Fish and Game has cataloged several streams in the immediate vicinity of the project site (Craig Quad B-4, #106-60-1025, 10530, 10540, 10550) that support runs of pink salmon. Several other anadromous streams are located within five miles of the project site. Consequently, juvenile salmon use the inshore area of Port St. Nicholas during spring and early summer for feeding and predator avoidance prior to migration out to sea. The inshore area of the project location also provides important habitat for several marine species including Pacific cod, arrowtooth flounder, Pacific ocean perch, dusky rockfish, shortraker/rougheye rockfish, yelloweye rockfish, flathead sole, rex sole, sablefish and sculpins.

Accordingly, we offer the following EFH Conservation Recommendations pursuant to Section 305(b)(4)(A) of the Magnuson-Stevens Act.

1. The use of any wood that has been surface or pressure-treated with creosote or treated with pentachlorophenol should be prohibited. Creosote contains numerous constituents that are toxic to aquatic organisms including polycyclic aromatic hydrocarbons (PAHs), phenolic compounds, and nitrogen- sulfur- or oxygenated heterocyclics (Poston, 2001). Leaching of these constituents continues throughout the life of the wood and has been associated with the development of tumors, immune system suppression, decreased fecundity and abnormal embryonic development. Pentachlorophenol has high chronic toxicity to aquatic life.

2. Alternatives to treated wood that have no or reduced toxicity should be used wherever practicable.
3. If treated wood must be used, any wood that comes in contact with marine or aquatic environments should be treated with waterborne preservatives approved for use in aquatic and/or marine environments. These include, but are not limited to: Chromated Copper Arsenic (CCA) Type C, Ammoniacal Copper Zinc Arsenate (ACZA), Alkaline Copper Quat (ACQ), Copper Boron Azole (CBA) or Copper Azole (CA). The applicant should only use wood that has been treated in accordance with best management practices developed by the Western Wood Preservers Institute. Treated wood should be inspected before installation to ensure that no superficial deposits of preservative material occur on the wood.
4. Over-water structures should be designed to prevent abrasion and splintering of wood.
5. All cutting and boring of treated wood should take place in upland areas; all waste materials must be kept out of the aquatic environment and be properly disposed of upland. Treated wood materials should not be stored in-water. Any cut wood, chips or sawdust from treated wood should be collected promptly and disposed of at an acceptable upland site.
6. No docks, ramps or other structures should be placed in or over eelgrass beds.
7. All work below the high tide line should be limited to low tidal stages to reduce turbidity.
8. No in-water work should be permitted from March 1 through June 15 of any year to protect out migrating salmon.

Under section 305(b)(4) of the Magnuson-Stevens Act, the Corps is required to respond to NMFS EFH recommendations in writing within 30 days. If the Corps will not make a decision within 30 days of receiving NMFS EFH Conservation Recommendations, the Corps should provide NMFS with a letter within 30 days to that effect, and indicate when a full response will be provided.

If you have any further questions, please contact Katharine Miller at 907-586-7643.

Sincerely,

James W. Balsiger
Administrator, Alaska Region
