

MID-SESSION REVIEW

BUDGET OF THE U.S. GOVERNMENT

FISCAL YEAR 2008

OFFICE OF MANAGEMENT AND BUDGET

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF MANAGEMENT AND BUDGET
WASHINGTON, D.C. 20503

THE DIRECTOR

July 11, 2007

The Honorable Nancy Pelosi
Speaker of the House
of Representatives
Washington, DC 20515

Dear Madam Speaker:

Section 1106 of Title 31, United States Code, calls for the President to transmit to the Congress a supplemental update of the Budget that was transmitted to the Congress earlier in the year. This supplemental update of the Budget, commonly known as the Mid-Session Review, contains revised estimates of the budget deficit, receipts, outlays, and budget authority for fiscal years 2007 through 2012.

Sincerely,

Rob Portman

Enclosure

Identical Letter Sent to The President of the Senate

SUMMARY

The Mid-Session Review is an annual update of estimates for Federal receipts and outlays that reflects economic, legislative, and other changes that have occurred since the President's Budget was released in February. The Federal budget deficit is now estimated to fall to \$205 billion in 2007, a reduction of \$43 billion or 18 percent from last year. This projected deficit is 1.5 percent of gross domestic product (GDP), well below the 40-year average of 2.4 percent. This estimate is also \$39 billion lower than the estimate in the February Budget, primarily due to higher-than-expected tax receipts. The revised projections continue to show the budget achieving balance in 2012.

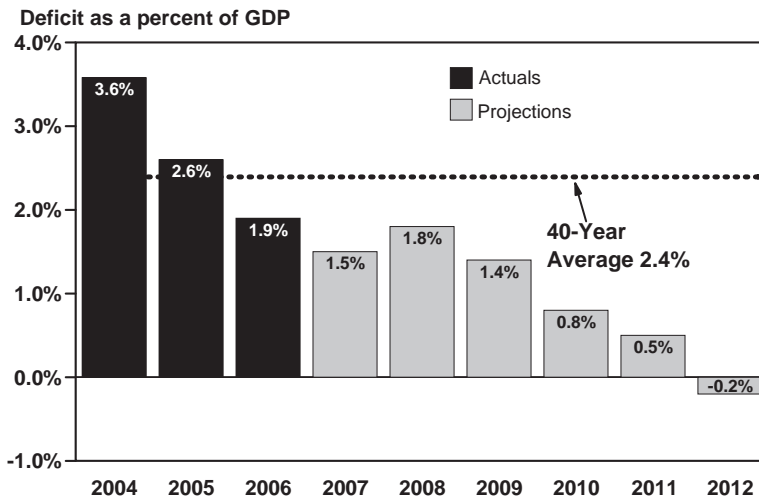

MAINTAINING A STRONG ECONOMY

The President is committed to maintaining the strength of the economy and increasing prosperity for all Americans. He has successfully pursued pro-growth policies, including the implementation of significant tax relief beginning in 2001.

The President's pro-growth policies have worked. Over the past five and one-half years, the Nation's economy has had sustained growth, with real, inflation-adjusted, GDP growing at an average annual rate of 2.9 percent since 2001. In calendar year 2006, GDP was more than \$13 trillion, 3.3 percent greater than 2005 on an inflation-adjusted basis. Real GDP growth early in 2007 has been more moderate than in recent years, but stronger growth is expected to resume for the remainder of the year and to continue throughout the budget horizon.

This sustained economic growth has led to the creation of 8.2 million new jobs since August 2003, with more than two million new jobs over the past year alone. Jobs have grown for 46 consecutive months, and the unemployment rate continues to be historically low. At 4.5 percent, the Nation's unemployment rate is below the averages for each of the decades of the 1970s, 1980s, and 1990s.

Chart 1. Balancing the Budget

The continuing strength of the Nation's economy is also evident in labor productivity improvements, reflecting increases in the efficiency of the labor force. Despite some recent slower productivity gains, the current decade has witnessed the highest sustained growth in labor productivity since the 1960s. Notably, non-farm productivity growth has averaged 2.8 percent annually since the beginning of 2001. Productivity growth ultimately serves as the basis for continued gains in the Nation's standard of living.

The President's policies have led to sustained real growth, more jobs, and higher incomes for Americans. Since the President took office, real after-tax income has increased by 9.9 percent or approximately \$3,000 per person.

PROMOTING ECONOMIC GROWTH THROUGH TAX RELIEF

The President has consistently sought to promote economic growth in a way that rewards hard work and entrepreneurship. Working with the Congress, the President has put tax policies in place that reduced marginal tax rates, the marriage penalty, capital gains and dividend tax rates; doubled the child tax credit; encouraged retirement and education savings; eliminated the death tax;

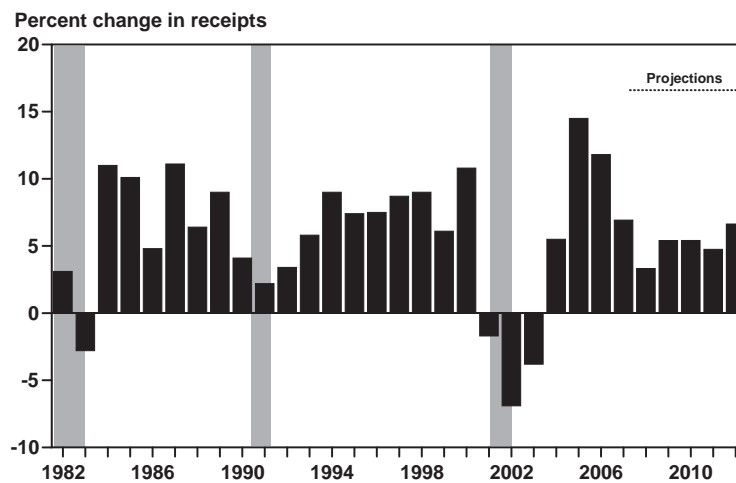

and increased incentives for small business investment.

The four major pieces of tax legislation that the President has signed into law continue to provide tax relief to millions of Americans. This year alone five million individuals and families will see their income tax liabilities completely eliminated, and 113 million taxpayers will see their taxes cut by an average of \$2,216. Fifteen million seniors will see their tax bills decline by an average of \$2,934, and 27 million small business owners will see reductions averaging \$4,712. Also, 45 million families with children will receive an average tax cut of \$2,864.

Tax relief has been good for American taxpayers and the American economy, and the stronger economy has been good for the Nation's treasury. Even with tax relief fully implemented, tax receipts grew at double-digit rates in 2005 and 2006. This is the highest two-year receipt growth since 1981, when receipt growth was instead driven by high inflation. 2007 is on track to be another year of solid growth in tax receipts.

The Nation's economic growth, and the resulting benefits of more jobs, higher wages, and increased Federal revenues, will be in jeopardy if Congress allows the tax relief to

Chart 2. Solid Economy = Growing Receipts

Note: Shaded areas indicate recessions.

expire in 2010. For this reason, the President has proposed a permanent extension of his entire tax relief program.

The President has proposed additional initiatives that would foster sustained growth, including programs to fund basic research and development, innovation and accountability in education, and the opening of new global markets for American farmers, workers, and service providers. In addition, the President supports efforts to reduce burdensome Government paperwork and regulations, and frivolous litigation.

MAINTAINING FISCAL DISCIPLINE

The overall improvement in the fiscal outlook, with a surplus projected for 2012, reflects the President's approach of pro-growth economic policies coupled with fiscal restraint. In February, the President submitted his proposed Budget to the Congress that would permanently extend tax relief and balance the budget by 2012. It would restrain spending by holding growth in non-security discretionary spending to a reasonable and responsible level for each year of the five-year budget horizon, while adequately addressing key national priorities, including education, health care, and energy. In addition, the President proposed to reduce or eliminate 141 programs, which would save \$12 billion in 2008. The President also proposed sensible changes to important

entitlement programs, such as Medicare and Medicaid, which would save \$92 billion over five years and \$301 billion over ten years. More importantly, the President's mandatory spending proposals would begin to address the long-term problem of entitlements by reducing Medicare's unfunded obligation by 25 percent.

The emergency war supplemental legislation enacted in May 2007, P.L. 110-28, provided much-needed funding for the Nation's troops fighting on the frontlines of the Global War on Terror in Iraq and Afghanistan, and appropriated such funds without the restrictions of the original legislation sent to the president. However, Congress also included unnecessary and unrequested spending that impedes deficit reduction efforts.

The Congressional Budget Resolution adopted earlier this year would increase both spending and taxes, while failing to address the greatest fiscal challenge facing the Nation—the unsustainable growth in entitlement spending. The budget resolution allows most of the President's tax relief to expire in 2010 and contains procedures that would result in the largest tax increase in American history, nearly \$400 billion over five years. It contains 32 reserve funds that allow at least \$88.5 billion more in mandatory spending over five years that would likely be offset with even more tax increases.

Chart 3. Receipts as a Percent of GDP

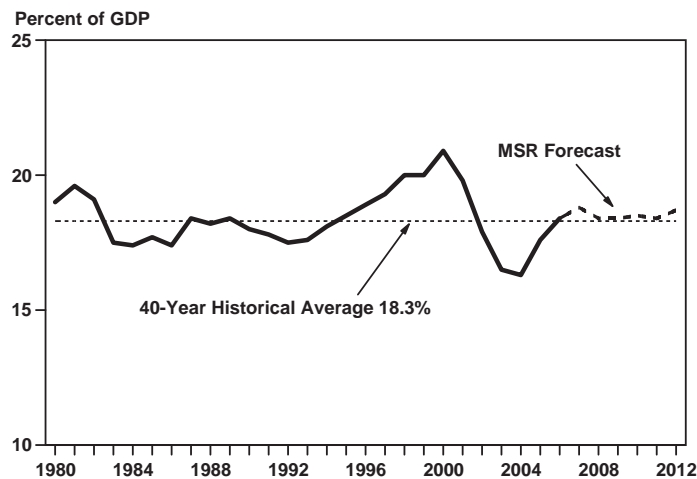

Chart 4. Federal Outlays in 2007

The Congressional Budget Resolution proposes to increase discretionary spending by 9.3 percent in 2008, more than three times the rate of inflation, including a 7.1 percent increase for non-defense, domestic spending. It adds \$22 billion to the President's request for discretionary spending in 2008, and adds \$205 billion over the five-year budget horizon. To maintain fiscal discipline, the Administration has already indicated that the President will veto appropriations bills if the Congress does not demonstrate a commitment to keeping discretionary spending within the overall levels provided in the President's Budget. Finally, the budget resolution does nothing to address the trillions in unfunded obligations in Medicare, Medicaid, or Social Security.

MID-SESSION UPDATE

Rising tax receipts

Tax receipts for the first eight months of 2007 have been strong, up by 8.0 percent, compared with tax receipts for the first eight months of last fiscal year. For the full fiscal year, overall receipts are projected to grow by 6.9 percent, which is faster than the rate of growth in GDP, and are expected to total \$2.574 trillion, \$34 billion higher than estimated in February. Individual income taxes are on track to grow at a double-digit rate for the year, and corporate income taxes are also estimated to show significant gains. Overall receipt growth is expected to be reduced

slightly this year by the refunds of Federal excise taxes on long-distance telephone service.

While revenue for 2007 is expected to be higher than projected in February, tax receipts for the five-year budget horizon are similar to the February projections. Overall growth in receipts is expected to average approximately 5 percent per year, roughly the same as the projected growth in GDP. At approximately 18.5 percent of GDP over the next five years, receipts are projected to remain above the 40-year historical average of 18.3 percent.

Changes in Outlays

Spending in 2008 and beyond is a growing problem that must be addressed in order to keep deficit reduction on track and achieve a balanced budget in 2012. In the short term, outlays for 2007 are projected to be \$2.779 trillion, \$6 billion less than projected in February. This relatively small decrease in outlays results primarily from slower-than-expected defense spending, which is offset partially by additional domestic spending in the 2007 war supplemental legislation and higher Medicaid outlays.¹

¹ The Mid-Session Review reflects, as did the February Budget, the enactment of two of the annual appropriations bills for 2007. In addition, the Mid-Session Review updates the estimates for the enacted full-year continuing resolution incorporating the remaining appropriations bills for 2007. The Mid-Session also reflects the effects of the war supplemental legislation, including the additional \$17 billion for unrequested and non-emergency spending.

Chart 5. Declining Federal Debt

Outlays are projected to be \$16 billion higher for 2008 than projected in February, for a total of \$2.918 trillion, and \$20 to \$30 billion higher than previously projected for each of the remaining years in the budget horizon. The higher projections for spending result primarily from increases in Medicare and Medicaid and from unrequested spending added to the 2007 war supplemental. The revised Medicare projections reflect, among other things, higher hospital utilization rates and changes in the Medicare cost indexes.

In the February Budget, the Administration proposed the Federal Aid Highways obligation limitation assumed in P.L. 109–59, but did not include an increase for the 2008 Revenue Aligned Budget Authority (RABA).² The Mid-Session Review estimates that Highway Trust Fund finances have deteriorated since February, with spending exceeding income in 2007 and 2008 and the Highway Account going insolvent by approximately \$4 billion in 2009.

Declining Deficits

The deficit outlook remains on a trajectory to achieve the President's goal of a balanced

budget by 2012, with a \$33 billion surplus projected for the final year of the budget horizon. In 2007, the deficit is estimated to be \$205 billion, 16 percent lower than the \$244 billion projected in February and 18 percent lower than the 2006 deficit of \$248 billion. The improvement in the 2007 deficit outlook results primarily from higher-than-expected receipts.

The size of the deficit relative to the overall economy—expressed as a percent of GDP—is the most meaningful indicator of the economic significance of the deficit. In the 2005 Budget, the President set a goal of cutting the deficit in half by 2009 from its projected 2004 peak of 4.5 percent, or \$521 billion. That goal was achieved in 2006, three years ahead of schedule, when the deficit fell to 1.9 percent of GDP, or \$248 billion. As shown in Chart 1, the 2007 deficit is projected to be 1.5 percent of GDP, lower than the 1.8 percent projected in February. For 2008, the deficit is projected to increase slightly to 1.8 percent of GDP, still well below its 40-year average of 2.4 percent of GDP. Beginning in 2009, the deficit is projected to resume a steady path of reduction until it is eliminated in 2012.

As the deficit as a percent of GDP has fallen, so too has debt held by the public as a percent of GDP. At a projected 37 percent of GDP for the end of 2007, the Nation's debt is significantly lower than the average of the

² The Department of the Treasury has reallocated 2006 revenues between the Highway Trust Fund and the Airport and Airways Trust Fund. The revised RABA adjustment for 2008 would be \$703 million, up from \$631 million in February.

other G-7 countries, which represent the seven largest industrial market economies. U.S. debt is projected to fall to 33 percent of GDP by the end of 2012, below the 40-year historical average of 35.5 percent.

ADDRESSING FUTURE FISCAL CHALLENGES

The President's pro-growth economic policies and continued spending restraint together reduce the deficit and lead to a projected balanced budget in the next five years. This is positive short-term news, but in the longer term, unsustainable entitlement spending clouds the Nation's budget outlook.

Next year, the first of the baby boomers will turn 62 and become eligible for early retirement benefits under Social Security. Between now and 2050, the percentage of the population age 65 and over is projected to increase from 12.4 percent to 20.8 percent. The aging of the baby boomers and increasing longevity pose a serious fiscal challenge for the Federal Government. Future retirees can expect to spend a greater portion of their lives in retirement than prior generations, but at a significant cost to future generations if current policies remain unchanged.

Under current policies, the increase in the senior population coupled with rising health care costs will put an unsustainable burden on Medicare, Medicaid, and Social Security in the coming decades. Currently, spending for Medicare, Medicaid, and Social Security is approximately 8 percent of GDP. By 2050, spending on these three programs is projected to be 16 percent of GDP, more than twice as large as spending on all other Government programs. Without reforms in the near-term, the dramatic increases in spending for these programs will ultimately require substantial tax increases, major benefit reductions, or massive and unsustainable amounts of borrowing.

The President's Budget proposes reforms that, if enacted, would make a substantial down payment on the Government's long-term fiscal imbalance. Specifically, proposed changes to Medicare will reduce the average annual rate of growth in Medicare by 0.6 percentage points over the next 10 years and reduce the program's unfunded obligation by \$8 trillion over the next 75 years. This proposal shows that even relatively small near-term savings can yield substantial fiscal improvements over time. The deficit for 2050 is projected to be 8.6 percent of GDP, but if the President's mandatory savings proposals are

adopted, the deficit for 2050 is projected to be significantly lower, at 5.7 percent.

As noted earlier, the Administration is disappointed that this year's Congressional Budget Resolution does not address the unsustainable growth of entitlement programs. Nevertheless, the President urges Congress to

consider the reforms he proposed in his 2008 Budget in February, which make a modest but meaningful step toward fiscal sustainability. In addition, the Administration looks forward to working with Congress on developing additional reforms to solve the Nation's long-term fiscal problem.

ECONOMIC ASSUMPTIONS

At mid-year 2007, the U.S. economy is in its sixth year of economic expansion.¹ Unemployment is low, payroll jobs are increasing, real wages are rising, and homeownership is at a high level. Consumer spending continues to increase robustly. The economy has weathered a decline in housing investment and continues to advance, and a return to stronger growth is expected. This healthy economic performance is a testament to the resilience of the U.S. economy, Federal Reserve monetary policy actions, and the Administration's successful pro-growth policies—including tax relief and ongoing efforts to promote investment in innovative technologies and to pursue liberalized international trade.

The Administration like most private forecasters expects the expansion to continue for the foreseeable future—with sustained non-inflationary real growth providing a firm foundation for the Federal budget outlook. In recent years, the strong economy has helped generate dramatic increases in Federal receipts, and incoming data show large receipts gains again in 2007, although not as strong as the double-digit rates of increase in 2005 and 2006. These gains have helped lower the Federal budget deficit, but keeping the budget deficit under control and on a sustainable path toward balance will require continued fiscal discipline. In addition, the long-run budget outlook continues to present challenges from expected demographic changes and rising health care costs.

ECONOMIC PROJECTIONS

The Administration's economic projections are based on information available as of early June 2007. They are summarized in Table 2. The projections are close to those of the Blue Chip Consensus (an average of about 50 private-sector forecasts). A comparison with Blue Chip is shown in Table 3.

Real Gross Domestic Product (GDP) and the Unemployment Rate: Because of somewhat slower growth over the last four quarters, real GDP is expected to increase 2.1 percent this year, but it is projected to resume a stronger 3.0 percent growth rate by 2008. Real GDP growth moderates gradually, reaching a 2.9 percent rate by 2012 as labor force growth slows with the aging of the work force. The unemployment rate is projected to rise slightly from 4.5 percent in 2007 to 4.8 percent by 2009.

Inflation: With growth at or near potential and unemployment near the sustainable long-run average, inflation is expected to be moderate as well. Inflation increased in 2006 in large part because of surging energy prices, and further increases in these prices pushed up inflation in the first half of 2007. With an expected stabilizing of energy prices, inflation is projected to be lower in coming years. On a year-over-year basis, the consumer price index (CPI) is projected to increase 2.6 percent this year and decline gradually to 2.3 percent by 2010. Growth in the GDP price index is projected to be 2.7 percent in 2007, and then decline to 2.0 percent by 2010. This projection is consistent with recent CPI core inflation—excluding food and energy items—of 2.2 percent over the 12 months through May, as well as ongoing modest inflation expectations, intense global competition, and the Federal Reserve's policy actions.

Interest Rates: The 3-month Treasury bill rate is expected to average 4.8 percent in 2007 and then to decline gradually to 4.1 percent by 2011. The decline in short-term rates is consistent with an expected decline in the rate of inflation. The yield on the 10-year Treasury note is projected to average 4.8 percent in 2007 and then to rise to 5.3 percent by 2011, restoring the typical positive spread between long rates and short rates. At that point, projected real interest rates would be close to their historical averages given the projected rate of inflation.

¹ Economic performance is discussed in terms of calendar years. Budget figures are in terms of fiscal years.

10-year Treasury notes	4.8	4.8	5.0	5.1	5.2	5.3	5.3

NA = Not Available.

¹ Based on information available as of early June 2007.

² Rent, interest, dividend, and proprietors' income components of personal income.

³ Seasonally adjusted CPI for all urban consumers.

⁴ Percentages apply to basic pay only; percentages to be proposed for years after 2008 have not yet been determined.

⁵ Overall average increase, including locality pay adjustments. Percentages to be proposed for years after 2008 have not yet been determined.

⁶ Average rate, secondary market (bank discount basis).

Incomes and Income Shares: Labor compensation—consisting of wages and salaries and benefits such as employer-provided insurance and pensions—is projected to rise relative to the size of the economy, while the share of corporate profits declines. Profits have been

unusually high in recent years, and the share of compensation has been below its long-run average. During the projection period, labor compensation is expected to catch up with the rising productivity trend and return to its historical average relative to GDP. The wage

share in GDP is also expected to rise from its recent low level, but less than for total compensation because the benefit share in total compensation is expected to increase further, holding down the expected rise in wages and salaries.

FORECAST COMPARISONS

Table 3 compares the Mid-Session Review (MSR) economic assumptions with those from the 2008 Budget and from the recent Blue Chip Consensus. While the Administration

forecast generally assumes that the President's Budget proposals will be enacted as proposed, private forecasters use their own assumptions about fiscal policy. Despite these differences, the Administration and Blue Chip economic projections are very close.

The Administration economic forecast for the MSR is generally similar to the forecast in the 2008 Budget published in February. The most significant difference is that real GDP growth for 2007 is now expected to be 2.1 percent on a year-over-year basis compared to 2.7 percent in

² Annual averages, percent.

the Budget. In 2008 and beyond, the projected real growth rates are similar to those of the Budget. Inflation is expected to be higher for 2007, but the long-run projections are the same. The unemployment rate in 2007 and 2008 is lower by 0.1 percentage point in the current projections compared with the Budget. The interest rate projections are similar to those in the Budget with only slight changes in 2007–2010.

SUMMARY

The economic news since the Budget was issued has been mixed. Economic growth

slowed early in the year largely because of the decline in housing, but payroll jobs have continued to expand and the unemployment rate has held steady. Even though inflation has been boosted by higher energy prices, the long-run inflation outlook remains favorable. The Mid-Session Review economic forecast projects a resumption of trend economic growth, a return of low and stable inflation, continued moderate interest rates, and healthy job creation and wage growth—in short, a favorable and reasonable economic outlook that serves as the basis for the Administration’s Federal budget projections.

RECEIPTS

The current estimate of receipts for 2007 exceeds the February Budget estimate by \$34 billion. The current estimate for 2008 is below the February Budget estimate by \$3 billion, the current estimate for 2009 is above the February Budget estimate, and the current estimates for 2010 through 2012 are below the February Budget estimates, resulting in receipts that are \$15 billion lower than the February Budget estimates over the five-year period, 2008 through 2012. These changes are the net effect of revised economic assumptions, technical reestimates, enacted legislation, and revisions in the Administration's proposals.

Revised economic assumptions and technical reestimates account for most of the revisions

in receipts since February, increasing receipts by \$25 billion in 2007 and \$9 billion in 2008, but reducing receipts by \$7 billion over the five-year period, 2008 through 2012. Higher-than-expected collections of corporation income taxes and excise taxes account for most of the increase in receipts for 2007. These increases are in large part attributable to higher-than-expected corporation income tax liability in tax years 2006 and 2007, as reflected in collection experience since February, and lower-than-expected refunds of the Federal telephone tax. The revisions in subsequent years primarily reflect increases in corporation income taxes and reductions in individual income taxes and payroll taxes. The increases in corporation income taxes are attributable in large part to upward revisions

Table 4. CHANGE IN RECEIPTS
(In billions of dollars)

	2007	2008	2009	2010	2011	2012	2008–2012
February estimate	2,540.1	2,662.5	2,798.3	2,954.7	3,103.6	3,307.3

Subtotal, economic assumptions and technical reestimates	24.8	9.1	-0.2	-1.1	-5.2	-10.1	-7.4
Enacted legislation	-0.4	-0.5	-0.6	-3.8	-1.4	6.1	-0.2
Revisions in proposals:							
Portion of proposals enacted or partly enacted		0.4	0.4	3.4	0.8	-1.7	3.3
Economic assumptions and technical reestimates	9.4	-12.1	5.1	1.2	-3.2	-1.6	-10.6
Subtotal, revisions in proposals	9.4	-11.8	5.5	4.6	-2.3	-3.3	-7.3
Total change	33.8	-3.1	4.7	-0.2	-8.9	-7.4	-14.9
Mid-Session estimate	2,573.9	2,659.4	2,803.0	2,954.5	3,094.7	3,299.9	

in taxable profits and new tax and collections data used in the estimating models that were not available at the time the budget estimates were made. The reductions in individual income taxes and payroll taxes primarily reflect downward revisions in wages and salaries, which are partially offset by revisions in estimating models to reflect current collection experience.

Legislated tax changes since February decrease receipts by a small amount over the five-year period, 2008 through 2012. These changes reflect enactment of the emergency war supplemental spending act, which the

President signed on May 25, 2007. The small business tax relief provided in this act was in large part offset by other tax changes. Revisions in the estimates of the Administration's proposals since February increase receipts by \$9 billion in 2007, reduce receipts by \$12 billion in 2008, and reduce receipts by \$7 billion over the five-year period, 2008 through 2012. The changes in 2007 and 2008 are in large part attributable to delay in enactment of the Administration's proposal to prevent the number of Alternative Minimum Tax (AMT) taxpayers for tax year 2007 from increasing, which reduces the receipt loss in 2007 and increases the loss in 2008.

SPENDING

Total outlays for 2007 are now estimated to be \$2,779 billion, down \$6 billion from the February estimate. A small increase due to enacted legislation is more than offset by decreases due to estimating changes. For 2008, the estimate of total outlays has increased by \$16 billion relative to February, to \$2,918 billion. This increase is largely the result of additional funding for the emergency war supplemental spending bill enacted in May, as well as the delayed enactment of final 2007 appropriations.

ENACTED LEGISLATION

In total, policy changes increase outlays by \$3.8 billion in 2007 and \$10.1 billion in 2008. Over the five-year period 2008 through 2012, policy changes increase outlays by \$20.3 billion. Since the transmittal of the Budget, the Congress has enacted P. L. 110–5, the Revised Continuing Appropriations Act for 2007, and P. L. 110–28, the emergency war supplemental spending bill. The Revised Continuing Appropriations Act provided a slightly different full-year, continuing resolution calculation than what was assumed in the February Budget.

ESTIMATING CHANGES

Changes in estimates arise from non-policy related factors including changes in economic assumptions, discussed earlier in this Review, and changes in technical factors. For 2007 and 2008, estimated outlays are \$9.5 billion lower and \$5.8 billion higher, respectively, than in February for non-policy related reasons. Over the period 2008 through 2012, outlays are \$101.9 billion higher than in February for non-policy related reasons.

Discretionary appropriations.—Outlays for discretionary appropriations decrease by \$11.8 billion in 2007 and \$8.4 billion in 2008 relative to the February Budget as a result of estimating changes. These changes reflect slower spending of discretionary funds, largely for defense programs.

Medicare.—Estimates of Medicare outlays are \$2.0 billion and \$6.3 billion higher for 2007 and 2008, respectively, than estimated in February. Over the period 2008 through 2012, outlays are above the February projections by \$39.8 billion. The increases in 2007 and 2008 are largely driven by increased projections of fee-for-service spending and revised assumptions about projected hospital spending. Increases in later years largely reflect increases due to these factors, partially offset by lower estimates for the prescription drug benefit resulting from updated assumptions about participation in the low-income subsidy and Medicare Advantage/Prescription Drug plans.

Medicaid.—As a result of estimating changes, Medicaid outlays are projected to increase by \$5.0 billion in 2007, \$5.9 billion in 2008, and \$27.1 billion over the period 2008 through 2012. The increase in 2007 largely results from higher year-to-date outlays than previously expected. The increases in 2008 and beyond largely result from higher actuarial estimates for Medical Assistance Payments based on recent expenditure trends.

Earned income and child tax credits.—During the 2007 filing season, claims for the earned income and child tax credits were higher than previously anticipated. As a result, the Mid-Session Review has \$12.8 billion higher outlays for these refundable tax credits over five years than estimated in February.

Social Security.—Estimating changes reduce outlays for Social Security by \$1.0 billion in 2007, but increase outlays over 2008 through 2012 by \$12.2 billion. The decrease in 2007 is largely due to lower disability benefits resulting from recent program experience. Increases over the five-year period largely reflect higher old age and survivors benefits resulting from higher cost-of-living adjustments and revised beneficiary projections, partially offset by lower disability benefits.

Veterans' compensation and pensions.—As a result of estimating changes, veterans' compensation and pension outlays are projected to increase by \$3.9 billion over the five-year period. This increase largely results from higher cost-of-living adjustments as well as revised technical assumptions including the Hartness court decision.

Student loans.—Outlays for student loan programs are projected to decrease by \$3.3 billion over the five-year period. This decrease is largely driven by reduced subsidy costs resulting from lower "death, disability, and bankruptcy" and default claims, and lower estimated costs associated with students postponing their student loan repayment as allowed by statute. This decrease is also driven by revised earlier estimates of when borrowers graduate from school and begin repaying their student loans.

Postal Service.—Estimating changes increase Postal Service outlays by \$3.1 billion

per year in 2007 and 2008. These increases largely reflect capital outlays, which were inadvertently excluded from the February Budget when the Postal Service converted its estimates from an accrual to a cash accounting basis. The increases also reflect higher-than-expected net operating costs.

Unemployment insurance.—Outlays for unemployment benefits are estimated to decrease by \$3.0 billion over five years. This decrease largely results from lower-than-expected rates of unemployment and wage growth as well as revised estimates of average wages, average weekly benefit amounts, and the ratio of weeks paid to weeks claimed.

Net interest.—Excluding the debt service associated with policy changes, outlays for net interest are projected to decrease by \$7.0 billion over five years. This reduction largely reflects lower debt service costs related to estimating changes in receipts and outlays.

Emergency Funding:				
Global War on Terror	50.0			

¹ Funding levels are equal to the amounts enacted in the Department of Defense and Homeland Security Appropriations Acts and full-year funding levels enacted in P.L. 110-5, the 2007 Continuing Appropriations Act. This level is adjusted to include savings enacted in the Continuing Appropriations Act from changes to mandatory programs.

² This category is composed of funding for the Department of Defense, homeland security activities Government-wide (see Table S-4), and funding for International Affairs (Function 150).

³ Department of Defense levels are consistent with the Future Years Defense Plan, and the homeland security levels are consistent with the Future Years Homeland Security Plan.

⁴ These amounts exclude the budgetary effects of the Administration's reauthorization proposal of the Federal Aviation Administration (FAA). That proposal would transform the current tax-financing system for FAA to a cost-based user-fee system. For more information, see the Transportation chapter and other related sections in the *Budget, Appendix*, and *Analytical Perspectives* volumes of the 2008 Budget. If this proposal were enacted, the Administration would adjust its discretionary cap proposal downward in these years to reflect the offsetting collections that would result from this user-based fee system.

¹ For more detail on Homeland Security funding, consult the Homeland Security Funding Analysis Chapter in the *Analytical Perspectives* volume of the 2008 Budget. Dollar amounts in this table are rounded to the nearest million at the account level, which may account for any discrepancies with the *Analytical Perspectives* chapter that are not due to enactment of P. L. 110-5, the 2007 Continuing Appropriations Act.

² Funding levels are equal to the amounts enacted in the Department of Defense and Homeland Security Appropriations Acts with other levels equal to the estimated full-year funding levels provided by P. L. 110-5, the 2007 Continuing Appropriations Act.

³ Includes \$1.6 billion in funding enacted in the 2007 Homeland Security and Defense Appropriations Acts and \$1.1 billion enacted in P. L. 110-28, the 2007 Emergency Supplemental Act. 2008 also includes an additional \$0.3 billion in the Administration's pending supplemental request for the Global War on Terror.

⁴ Mandatory homeland security programs include \$1 billion from anticipated spectrum auction receipts appropriated in the Deficit Reduction Act of 2005 for the Department of Commerce to make grants to public safety agencies for communications interoperability purposes.

* \$500 million or less.

Table S-13. FEDERAL GOVERNMENT FINANCING AND DEBT

(Dollar amounts in billions)

-
- ¹ A decrease in the Treasury operating cash balance (which is an asset) is a means of financing a deficit and therefore has a positive sign. An increase in checks outstanding (which is a liability) is also a means of financing a deficit and therefore also has a positive sign.
 - ² Besides checks outstanding, includes accrued interest payable on Treasury debt, uninvested deposit fund balances, allocations of special drawing rights, and other liability accounts; and, as an offset, cash and monetary assets (other than the Treasury operating cash balance), other asset accounts, and profit on sale of gold.
 - ³ Consists mainly of Federal Financing Bank debt (which is not subject to limit), the unamortized discount (less premium) on public issues of Treasury notes and bonds (other than zero-coupon bonds), and the unrealized discount on Government account series securities.
 - ⁴ The statutory debt limit is \$8,965 billion, enacted on March 20, 2006.
 - ⁵ Treasury securities held by the public and zero-coupon bonds held by Government accounts are almost all measured at sales price plus amortized discount or less amortized premium. Agency debt securities are almost all measured at face value. Treasury securities in the Government account series are otherwise measured at face value less unrealized discount (if any).

GLOSSARY

Appropriation.—An appropriation provides legal authority for Federal agencies to incur obligations and to make payments out of the Treasury for specified purposes. Appropriations bills, such as the Department of Homeland Security or the Departments of Labor, Health and Human Services, and Education bills, are considered every year by the Congress and supplemental appropriations bills are considered from time to time.

Authorization.—An authorization is an act of the Congress that establishes or continues a Federal program or agency and sets forth the guidelines to which it must adhere.

Budget Authority.—Budget authority is the authority provided by law to incur financial obligations that will result in outlays.

Budget Resolution.—The budget resolution is the Congress' annual framework that sets targets for total budget authority, total outlays, total revenues, and the deficit (on-budget), as well as discretionary and mandatory allocations within the spending targets. These targets guide the committees' deliberations. A budget resolution does not become law and is not binding on the Executive Branch.

Cap.—A "cap" is a legal limit on annual discretionary spending.

Deficit.—A deficit is the amount by which outlays exceed receipts in a fiscal year.

Discretionary Spending.—Discretionary spending is spending that the President and the Congress control through annual appropriations bills. Examples include spending for such activities as the FBI, the Coast Guard, education, space exploration, highway construction, defense, and foreign aid.

Entitlement.—An entitlement program is one in which the Federal Government is legally obligated to make payments or provide aid to any person who meets the legal criteria for eligibility. Examples include Social Security, Medicare, Medicaid, and Food Stamps.

Fiscal Year.—The fiscal year is the Federal Government's accounting period. It begins on

October 1st and ends on September 30th. For example, fiscal year 2008 begins on October 1, 2007, and ends on September 30, 2008.

Gross Domestic Product (GDP).—GDP is a measure of the market value of goods and services produced within the United States. It is the standard measure of the size of the economy.

Mandatory Spending.—Mandatory spending is controlled by permanent law rather than annual appropriations. Examples are Social Security and the Student Loan Program. The President and the Congress can change the law with respect to the eligibility criteria or the payment formula, and thus change the level of spending on mandatory programs, but annual action is not necessary to ensure the continuation of spending. In addition, budget authority provided in annual appropriations acts for certain programs is treated as mandatory because the authorizing legislation entitles beneficiaries to receive payment or otherwise obligates the Government to make payment.

Obligations.—Obligations are binding agreements that result in outlays, immediately or in the future.

Outlays.—Outlays are the primary measure of Government spending. Outlays are payments to liquidate obligations, largely measured on a cash basis. Total Federal outlays are a net figure, consisting of gross payments minus the amount of business-like collections and intragovernmental transactions, in a given fiscal year.

Receipts.—Governmental receipts (sometimes called receipts or revenues) are the collections of money that primarily result from taxes and similar Government powers to compel payment. Examples of governmental receipts include income taxes, payroll taxes, excise taxes, and customs duties. They do not include offsetting receipts or collections from the Federal Government's business-like activities, such as the entrance fees at national parks, or collections by one Government account from another.

Surplus.—A surplus is the amount by which receipts exceed outlays in a fiscal year.
