Costs

After Performance
Contracting

What is WYECIP?

WYECIP is a simple, quick way for facility owners to implement and finance energy conservation measures. WYECIP facilitates performance contracting, which is a method of funding energy conservation measures through guaranteed energy savings.

Benefits of WYECIP

- Simplified procurement through pre-qualification of Energy Service Companies, which develop, install and finance projects designed to improve energy efficiency and reduce maintenance costs for a facility
- Technical assistance to identify potential energy conservation measures
- Assistance in evaluating proposed energy conservation measures
- Long-term project monitoring

Benefits of Performance Contracting

- Completing Energy Conservation Measures at the same time avoids the costs of piecemealing work

- Coordinated design and construction
- Successful systems operation is assured by project commissioning
- Guaranteed energy savings

Verification of Savings

Measurement and verification are integral elements of a performance contracting. Annual reports confirm the savings.

Eligible Facilities

- Municipal-county-state
- Community colleges-university
- K-12 schools
- Non-profit hospitals/nursing homes
- Other non-profit facilities
