Because this is a list there needs to be an option for greater than the last interval.

There needs to be an option for when the data is not available because it is not reported.

We are proposing the extension of the interval than proposed in GL-42 since we have experience with products that the AE onset has

TYPE OF INFORMATION IN REPORT LOV (A.4.4.3 GL 42)			
NAME	DEFINITION	SHORT NAME	NCI CONCEPT ID
SAFETY ISSUE	Use this category for Spontaneous Adverse Event Reports (AERs) that involve animal or involve noxious reactions in humans after being exposed to Veterinary Medicinal Products (VMPs). An adverse event is any observation in animals, whether or not considered to be product-related, that is unfavorable and unintended and that occurs after any use of VMP (off-label and on-label uses).	SAFETYVET	
LACK OF EXPECTED EFFICACY	Use this category for Spontaneous Adverse Event Reports (AERs) that involve animal where the adverse event is related to a suspected lack of expected efficacy according to the approved label.	LOEVET	
BOTH	Use this category if the Spontaneous AERs includes both a Safety Issue and a Lack of Expected Efficacy issue.	BOTHVET	
OTHER	Use this category if neither the Safety Issue or Lack of Expected Efficacy category apply.	OTHVET	
CLINICAL STUDIES	Use this category for AERs reporting for clinical studies/trials or promotional/advertisement studies/trials.	CLINSTUDYVET	

CVM is adding the Clinical Studies category to the proposed list for CVM implementation purposes only. CVM plans to use the same data elements and transmission for adverse events other than spontaneous reports. However, this is outside the scope of the VICH Pharmacovigilance Working group.

CVM is proposing that all of the VICH list be available and maintained by the National Cancer Institute. Terms can be added to each list and used not only for the Veterinary Implementation of Pharmacovigilance but for other electronic uses such as drug listing.

TYPE OF SUBMISSION LOV (A.4.4.1 GL 42)			
NAME	DEFINITION	SHORT NAME	NCI CONCEPT ID
EXPEDITED	Expedited submission of certain Adverse Event Reports (AERs) may be required, related to the seriousness or unexpectedness of the reported event or because of the urgency of its implications regarding the safety of animals or man. A serious adverse event is any adverse event which results in death, is life-threatening, results in persistent or significant disability/incapacity, or a congenital anomaly or birth defect. For animals managed and treated as a group, only an increased incidence of serious adverse events as defined above exceeding the rates normally expected in that particular group is considered a serious adverse event. An unexpected adverse event is an adverse event of which the nature, severity or outcome is not consistent with approved labeling or approved documents describing expected adverse events for a VMP.	EXPVET	
PERIODIC	Submission of all AERs not previously submitted as EXPEDITED.	PERVET	
FOLLOWUP	Use this category for additional/followup information related to a previous AER.	FPVET	
NULLIFICATION	Use this category to nullify a previous AER.	NULLVET

Regarding the Interval of Administration list, we are going to need to add an integer value for it such that the choices will read:

(integer)(time interval)

We will need to have Guidance for this so that it is understood that "every" precedes the integer and time value, such that the choice is

"every"(integer)(time interval)

even though the "every" is not present on the form. So, the selection of integer "3" and time interval "hours" is presented as:

3 hours

and understood to mean "every 3 hours".

The elements for date of first administration and date of last administration will help to clarify the confinement of the time interval.

There are three list of time: B.1.8.3 for age units, B.2.12 for interval of administration, and B.3.3.2 time units for duration. We are proposing to consolidate these similar time lists into a single list and use user guidance to specify the time units to be used for each data elements.

- B.2.12 Seconds, Minutes, Hours, Days, Weeks, Months, Years, Various, Unknown

ASSESSMENT CATEGORIES LOV

NAME	DEFINITION	SHORT NAME	NCI CONCEPT ID
Probable	<p>Probable: For inclusion in the category 'probable', all of the following minimum criteria should be met: • There should be a reasonable association in time between the administration of the VMP and onset and duration of the reported AE. • The description of the clinical phenomena should be consistent with, or at least plausible, given the known pharmacology and toxicology of the VMP. • There should be no other equally plausible explanations for the AE. When any of the above criteria cannot be satisfied (due to lack of sufficient information or conflicting data) then the association cannot be assessed as 'probable'.</p>	Probable	
Possible	<p>Possible: For inclusion in the category 'possible', association of the AE with administration of the primarily suspect VMP(s) is one of other possible and equally plausible explanations for the described event.</p>	Possible	
Unlikely	<p>Unlikely: Where sufficient information exists to establish that the described event was not likely to have been associated with administration of the VMP(s), or other more plausible explanations exist, the assessment should be categorized as 'unlikely'.</p>	Unlikely	
Unknown	<p>Unknown: All events where reliable data is either unavailable or is insufficient to make an assessment should be categorized as 'unknown'.</p>	UNK
