Alternative Cigarettes, Inc. is proud to offer our alternative cigarette brands to smokers across the country. These brands give consumers a choice over commercialized brands. The five major American tobacco companies could have offered such products to smokers years ago. However, they have refused to do so.

The major tobacco companies literally put hundreds of chemicals and additives in their cigarette brands. After years of pressure by American consumers and by Congress, this list was recently disclosed by the giant tobacco companies themselves. This exact list is enclosed for your review.

A number of these additives should give smokers cause for concern. Some of these are known carcinogens. Notice that ammonia is on this list. A recent finding shows that when ammonia is added to cigarettes it actually increases the amount of nicotine that the body absorbs. Other studies show that the most popular brands have up to 12 percent sugar. They also use a high percentage of reconstituted (recycled) tobacco.

Native Americans smoked all natural tobacco without the ills that are associated with smoking today. Could it be that the chemicals and additives cause more health problems than the natural tobacco itself? Much research needs to be done on this subject.
