

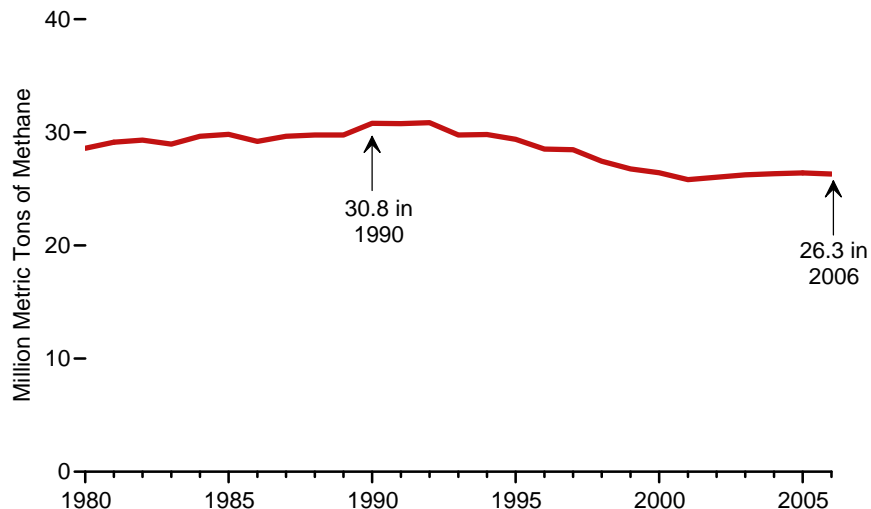

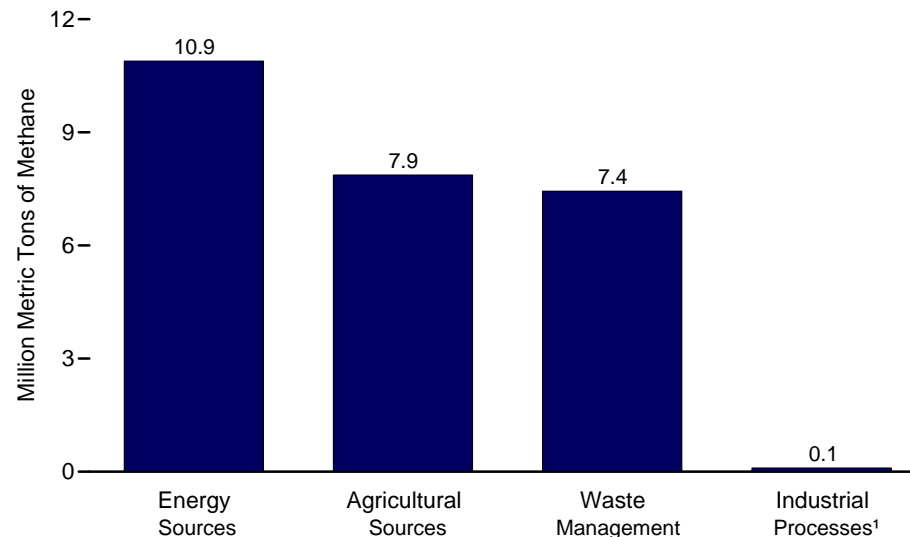

**Figure 12.5 Methane Emissions**

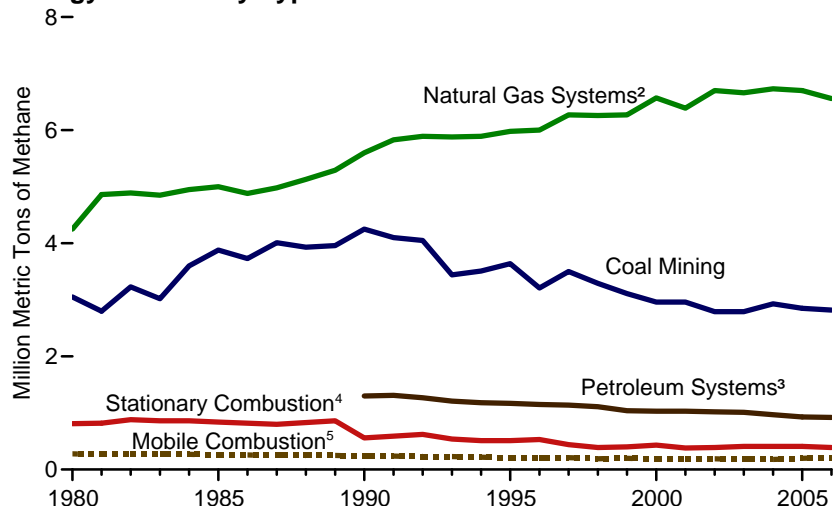

**Total, 1980-2006**

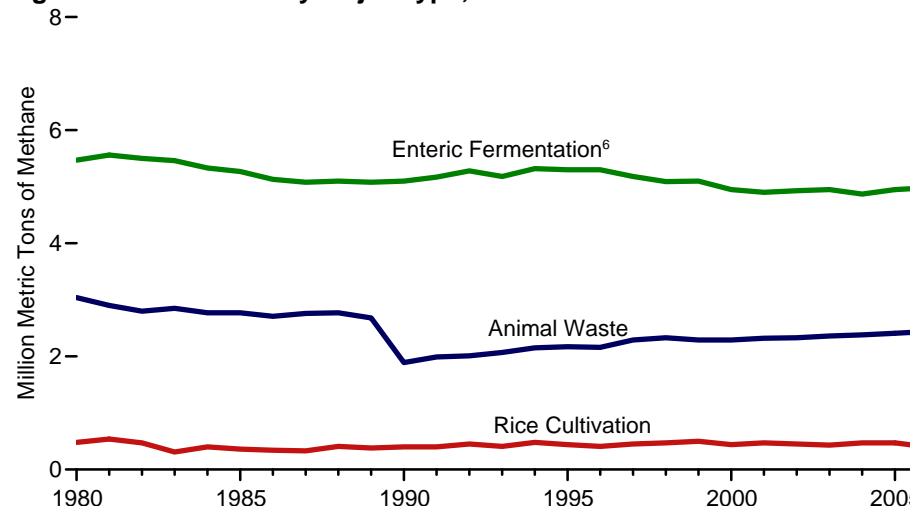

**By Source, 2006**

**Energy Sources by Type 1980-2006**

**Agricultural Sources by Major Type, 1980-2006**

<sup>1</sup> Chemical production, and iron and steel production.

<sup>2</sup> Natural gas production, processing, and distribution.

<sup>3</sup> Petroleum production, refining, and distribution.

<sup>4</sup> Consumption of coal, petroleum, natural gas, and wood for heat or electricity.

<sup>5</sup> Emissions from passenger cars, trucks, buses, motorcycles, and other transport.

<sup>6</sup> Methane emitted as a product of digestion in animals such as cattle, buffalo, sheep, goats, and camels.

Note: Because vertical scales differ, graphs should not be compared.
