

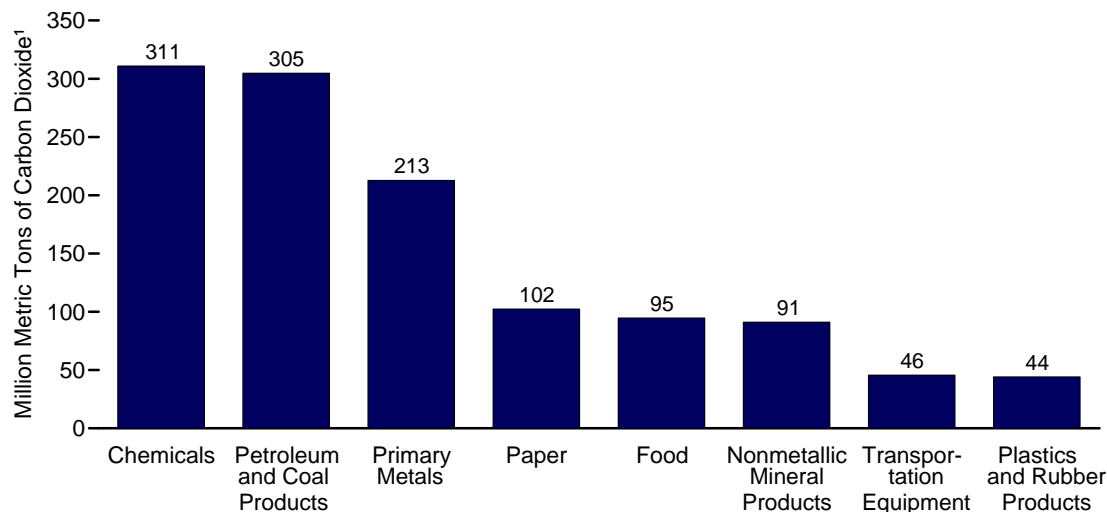

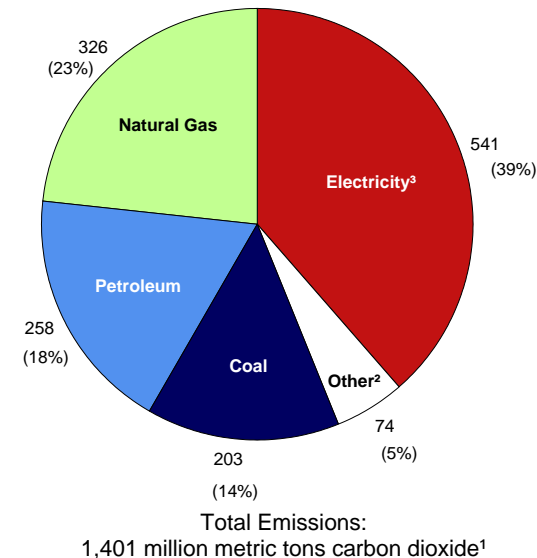

**Figure 12.4 Carbon Dioxide Emissions From Consumption of Energy for All Purposes in the Manufacturing Sector, 2002**

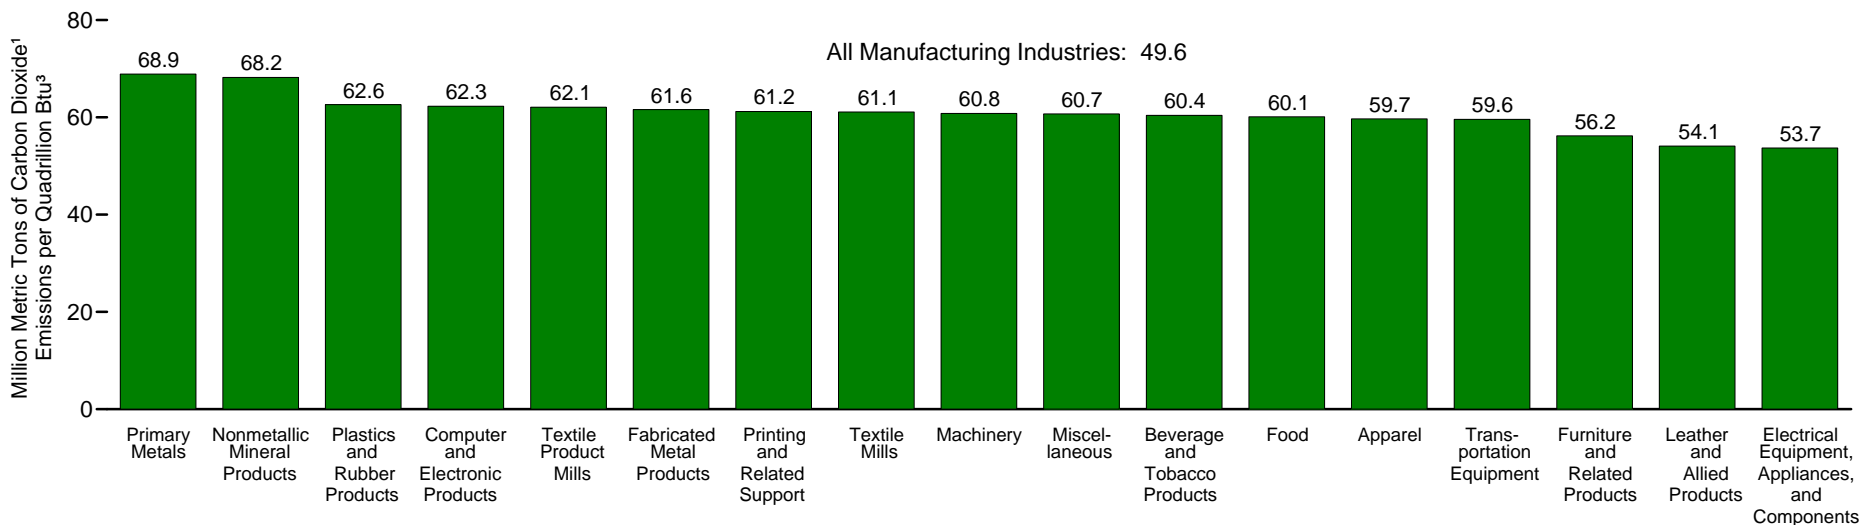

**Carbon Dioxide Emissions by Top Industry Groups**

**Carbon Dioxide Emissions by Energy Source**

**Carbon Dioxide Emissions per Unit of Primary Consumption, Top Industry Groups**

<sup>1</sup> Metric tons of carbon dioxide can be converted to metric tons of carbon equivalent by multiplying by 12/44.

<sup>2</sup> All other types of energy that respondents indicated were consumed or allocated.

<sup>3</sup> From energy inputs used to produce electricity, including associated losses. Source: Table 12.4.
