Table 1-31. Cumulative Birth Rates by Live-Birth Order, Exact Age of Mother, According to Race of Child, for Women in Selected Groups of Cohorts From 1886-1900 to 1977-81: United States, 1940-96

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in censuses. For method of computation, see Technical Appendix. Cumulative rates are the sums of central rates for the specified cohort up to the specified age. Rates are by race of child. The rates in this table for 1991-95 are based on postcensal population estimates consistent with the 1990 census. These rates will be revised based on the results of the 2000 census when population data in the necessary detail become available)

Exact age of woman, cohort, and race of child	As of January 1	Total	Live-birth order

Table 1-31. Cumulative Birth Rates by Live-Birth Order, Exact Age of Mother, According to Race of Child, for Women in Selected Groups of Cohorts From 1886-1900 to 1977-81: United States, 1940-96

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in censuses. For method of computation, see Technical Appendix. Cumulative rates are the sums of central rates for the specified cohort up to the specified age. Rates are by race of child. The rates in this table for 1991-95 are based on postcensal population estimates consistent with the 1990 census. These rates will be revised based on the results of the 2000 census when population data in the necessary detail become available)

Exact age of woman, cohort, and race of child	As of January 1	Total	Live-birth order

Table 1-31. Cumulative Birth Rates by Live-Birth Order, Exact Age of Mother, According to Race of Child, for Women in Selected Groups of Cohorts From 1886-1900 to 1977-81: United States, 1940-96

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in censuses. For method of computation, see Technical Appendix. Cumulative rates are the sums of central rates for the specified cohort up to the specified age. Rates are by race of child. The rates in this table for 1991-95 are based on postcensal population estimates consistent with the 1990 census. These rates will be revised based on the results of the 2000 census when population data in the necessary detail become available)

Table 1-31. Cumulative Birth Rates by Live-Birth Order, Exact Age of Mother, According to Race of Child, for Women in Selected Groups of Cohorts From 1886-1900 to 1977-81: United States, 1940-96

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in censuses. For method of computation, see Technical Appendix. Cumulative rates are the sums of central rates for the specified cohort up to the specified age. Rates are by race of child. The rates in this table for 1991-95 are based on postcensal population estimates consistent with the 1990 census. These rates will be revised based on the results of the 2000 census when population data in the necessary detail become available)

Table 1-31. Cumulative Birth Rates by Live-Birth Order, Exact Age of Mother, According to Race of Child, for Women in Selected Groups of Cohorts From 1886-1900 to 1977-81: United States, 1940-96

(A cohort is identified by the year in which the women were born. Since these women retain this designation throughout their childbearing years, their fertility can be followed over time. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in censuses. For method of computation, see Technical Appendix. Cumulative rates are the sums of central rates for the specified cohort up to the specified age. Rates are by race of child. The rates in this table for 1991-95 are based on postcensal population estimates consistent with the 1990 census. These rates will be revised based on the results of the 2000 census when population data in the necessary detail become available)

Exact age of woman, cohort, and race of child	As of January 1	Total	Live-birth order							
			1	2	3	4	5	6	7	8 and over
1937-41.....	1986	3437.0	887.2	776.6	599.1	428.3	289.4	189.9	116.6	149.9
