If you know anyone living with Alzheimer's disease (AD), you know how important it is to find a treatment.

Researchers are participating in a new nationwide study that will test an experimental treatment to target the source of the disease. The experimental drug may block a critical pathway in AD that causes damage to the nerve cells in the brain. Participants will receive either the active study drug or placebo (inactive pill). All participants will be monitored carefully by a team of doctors and nurses at the research clinic throughout the study.

You are eligible to participate if you:

- Are age 50 or older and have mild to moderate AD
- Have not suffered from serious or unstable diseases within the past three months
- Do not have Type 1 or Type 2 diabetes
- Have a reliable caregiver

PEOPLE OF ALL RACIAL OR ETHNIC BACKGROUNDS ARE ENCOURAGED TO PARTICIPATE
