

Tips for Teens with Diabetes

Be Active!

National Diabetes Education Program

Physical activity is good for everyone. Being active is really important if you have diabetes. Check out these ideas on how to be more active.

Being active helps you:
relax, lose weight,
feel better, sleep well,
lower blood glucose,
have more energy,
and be more alert.

Get moving! Find great activity tips ➔

Get into action and have fun!

What's so important about being physically active?

Being active keeps your body healthy and strong and gives you more energy. It can help you think and be more alert in school. It can also help you stay at a healthy weight or help you lose weight slowly.

Being active is an important part of a healthy lifestyle.

Physical activity can make you feel better if you are in a bad mood or stressed out. It can relax you and help you sleep well. It helps your body use blood glucose (GL00-kos), also called blood sugar, for energy. Physical activity can help keep your blood glucose in a normal range.

What activities can I do?

There are many ways you can be active. Pick things you like to do.

- Take a walk, hike, or ride a bike.
- Skateboard, roller blade, or ice skate.
- Play some music and dance with your friends. If you like video games, try a dance or other active video game.
- Play basketball, baseball, softball, golf, soccer, tennis, volleyball, or your favorite sport.
- Go bowling.

Think of other things you like to do and just move!

It is an easy way to have fun.

Make physical activity a part of your daily life. Be active with your friends or family members. It is easier and more fun when you ask someone to join you.

How active should I be?

If you have not been very active in the past, start slowly. Try a few minutes each day. Do not get upset if you cannot do a lot or if you get out of breath at first—keep moving. Any amount of activity will help.

Slowly work up to at least 60 minutes everyday. You might find it fun to count your steps with a pedometer (step counter). Add a few more steps each day. Over time, work up to at least 10,000 steps a day.

What should I do before being more active?

Talk to your doctor about the types of physical activity that might work best for you.

- Check your blood glucose before the start and after the end of your activity.
- If you take insulin, make sure your blood glucose does not get too low during or after activity. Always wear a Medical ID bracelet.
- Keep something handy to treat low blood glucose, such as fruit juice, glucose tablets, or a snack.

But I hate to exercise – what can I do?

You do not have to play a sport or go to a gym. There are a lot of things you can do to be more active:

- Do sit-ups or **jump** rope while watching TV.
- **Lift** light weights to strengthen your muscles.
- **Jog** around the block or walk fast around the mall a few times.
- Help your mom or dad **carry** groceries, **clean** the house, cut grass, do **garden** work, rake leaves, or **shovel** snow.
- Take the **stairs** instead of the elevator.
- Take your dog for a **walk**.
- Ride your **bike** instead of driving or getting a ride from your parents or a friend.

play

Make a list of things you like to do to be physically active. Hang it in your room as a reminder. **Keep track of your progress.**

Who can help me be more active?

Ask your **family** members and **friends** to do something fun with you—and work up a sweat. Being active is good for them too and a great way for families to spend time together. Ask your family to take a walk after dinner instead of watching TV. Instead of computer games, play music that the whole family likes and dance!

Start an activity group with your friends. Try a different sport or activity each week, or simply walk home from school together instead of taking the bus.

dance...jog
jump rope...take
the stairs...swim
rake leaves...clean the
house...walk your dog
ride a bike...play
baseball

Tips for parents

to promote physical activity for teens in their community

- **Talk to school staff** about allowing more activity time for students.
- Ask if you can schedule physical activities such as karate or dance at the school during after-school hours.
- **Involve your family** in active programs like the YMCA, swim clubs, 4H, Boy or Girl Scouts, Boys & Girls Clubs, and youth recreation programs.
- **Talk to local leaders** about making safe places for teens to be active.
- **Volunteer** to help create or fix up public playgrounds or sports grounds.

run

How can I manage my diabetes?

If you have diabetes, you need to be active, make healthy food choices, and stay at a healthy weight. You also need to take your insulin or any other medicines that your doctor tells you to and check your blood glucose as planned with your health care team. **Taking care of your diabetes can help you stay fit, feel great, and give you more energy to have fun.**
