

RESET 12M Site Conditions Report Site Manus

The RESET Site Conditions Report is intended to record the site conditions upon arrival of the RESET team, giving us a chance to monitor what has happened at the site since the last RESET visit. It is a way to capture your general observations on how the site is holding up and how it is being taken care of. It could be carried out like a daily round, checking everything that the observers would check.

1. Check the vans and site in general, are they clean?
2. Check the domes and windows of the instruments, are they clean and not damaged?
3. Check whether the instruments are level.
4. Check the desiccant in those instruments that use them.
5. Check the condition of cables and connections.
6. Check the storage of spares and supplies.

Item	Notes
	Top of Vans Need Refinishing
	Site looks ok
	Unused Loose end cables, function boxes could be removed
	Observers/Francis want to wash vans with fungus (killer)
	The site is clean and well organized
	The site is almost entirely vegetated to the point of week-wacking although the observers expressed reluctance to remove any greenery.
	We proceeded to unpack boxes and inspect the site. The gas cylinders continue to be stored in an unsafe manner; we hope to have this situation resolved before leaving.
	WSI blue box A/C metal screen savers filters size 7 1/2 x 12 1/2
