# 21ST CENTURY ELECTRIC GRID

# 10 Year Smart Grid Outlook

Q41: In the next 10 years, which of the following trends do you think will have begun to be implemented?

# The Smart Grid

## 20th Century Grid

## 21st Century Smart Grid

Electromechanical	Digital
One-way communications (if any)	Two-way communication
Built for centralized generation	Accommodates distributed generation
Radial topology	Network topology
Few sensors	Monitors and sensors throughout
“Blind”	Self-monitoring
Manual restoration	Semi-Automated restoration and, eventually, self-healing
Prone to failures and blackouts	Adaptive protection and islanding
Check equipment manually	Monitor equipment remotely
Emergency decisions by committee and phone	Decision support systems, predictive reliability
Limited control over power flows	Pervasive control systems
Limited price information	Full price information
Few customer choices	Many customer choices

# Seven Key Characteristics of Smart Grid

- 🌐 **Self-healing.** Grid Rapidly Detect, Analyze, Respond and Restore.
- 🌐 **Empower and Incorporate the Consumer.** Ability to Incorporate Consumer Equipment and Behavior in Grid Design and Operation.
- 🌐 **Tolerant of Attack.** Grid Mitigates and Resilient to Physical and Cyber Attacks.
- 🌐 **Provides Power Quality Needed by 21st Century Users.** Grid Provides Quality Power Consistent with Consumer and Industry Needs.
- 🌐 **Accommodates Wide Variety of Supply and Demand.** Grid Accommodates Variety of Resources (Including DR, CHP, Wind, PV).
- 🌐 **Fully Enables Maturing Electricity Markets.** Allows for and is Supported by Competitive Markets.

# Smart Grid System Integration at Consumer Level

# **What Makes Meter “Smart” or “Advanced”**

**The three functions that make a meter smart are:**

- ★ The ability to take interval measurements, measuring both what was consumed and when.**
- ★ Automatic transmission of the resulting data, eliminating the need for manual reading.**
- ★ Two-way communications: the ability to both “listen” and “talk”.**

**Levels of sophistication categorize meters into several types - from simply measuring consumption to helping constantly and economically regulate consumption.**

# Smart Grid at Customer Level

Grid Friendly Appliances sense grid frequency excursions & control region's appliances to act as spinning reserve – No communications required!

# AMI Deployment - Market Averages

# AMI Comprehensive Findings

(Source: KEMA)

**Total Cost of  
Projects**

**Average Budget/  
Estimated Cost**

**\$7 billion**

**\$775 million**

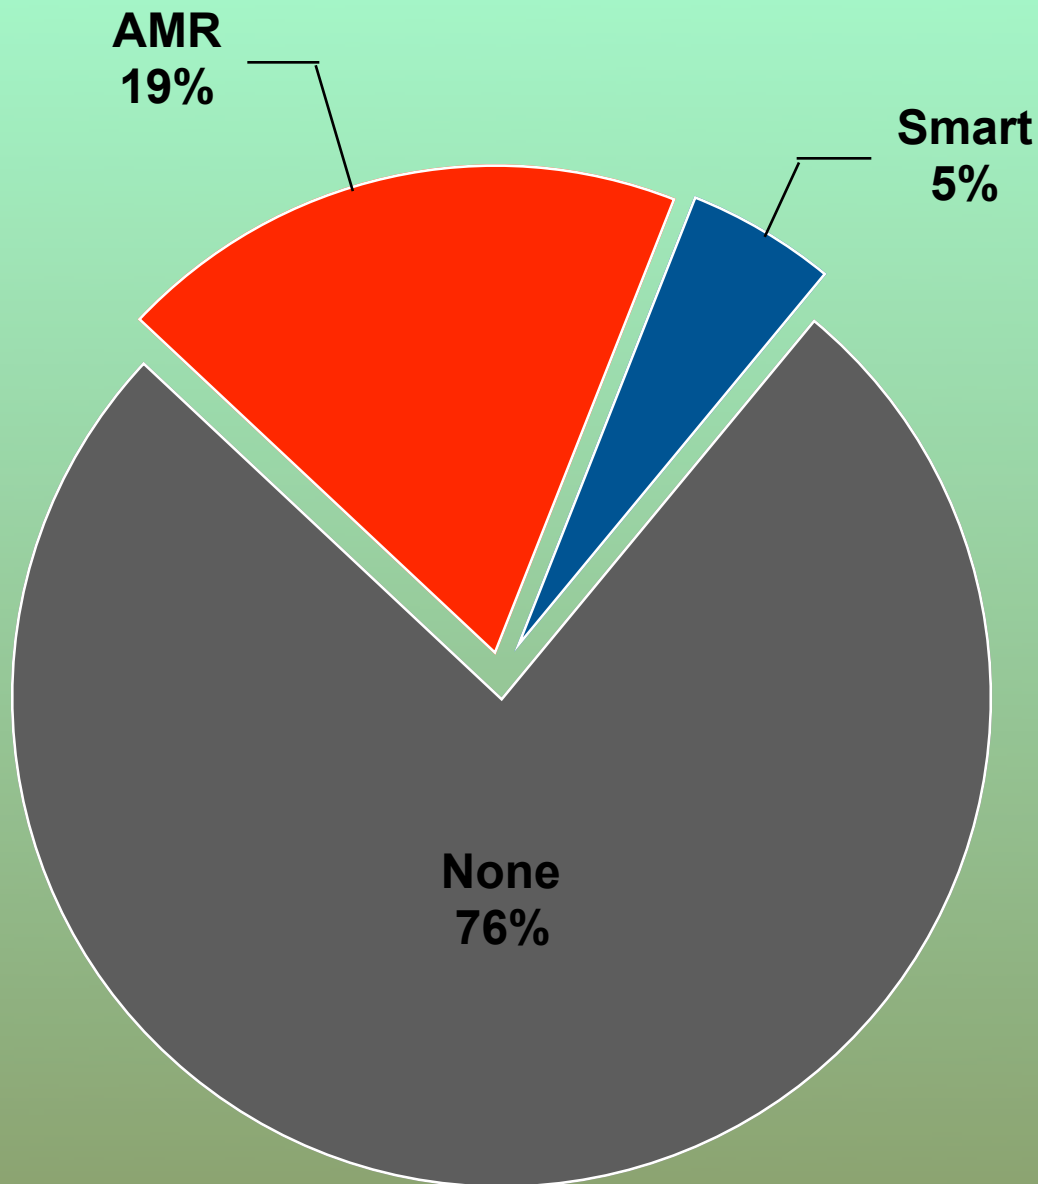

Note: Cost data was based on nine utilities for which estimates were available.

# Specific Utility Cost Data

(Source: KEMA)

Utility	Projected AMI Project Cost (total)
Con Edison	\$892 million
Baltimore Gas & Electric	\$400 million
CenterPoint	\$1.8 billion
Southern Company	\$280 million
Pepco	\$128 million
San Diego Gas & Electric	\$574 million
Pacific Gas & Electric	\$1.7 billion
Southern California Edison	\$1.3 billion
Portland General Electric	\$130 million

# Smart Meter Installations

135 million

# AMI Installations

# Smart Grid at Transmission Level

## VFT Technology

- Provides continuously variable phase angle shift up to 360 degrees.
- By adjusting phase angle, RT regulates power flow and control is steady, smooth and continuous.
- Continuous rather than step-wise control
- Improves grid stability
- Low harmonic generation

# Visualization Tools

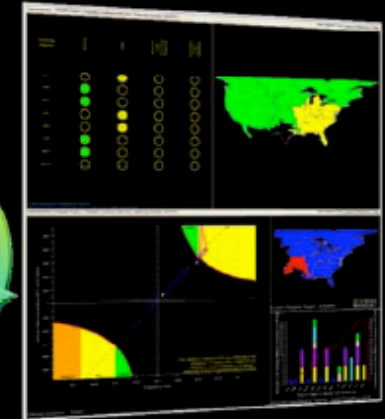

## A STANDARD METRICS

- Balance Resource and Demand
- Frequency Response

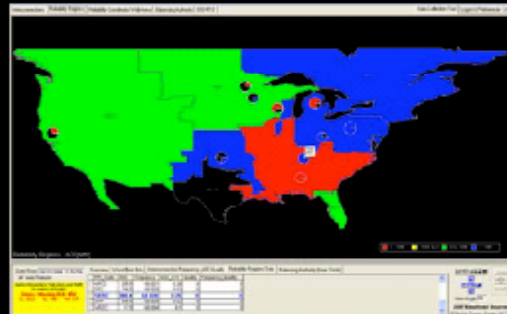

## B REAL TIME ALARMING

SHORT-TERM: -EAST 9/28/2006 (EDT)  
 Frequency Absolute value of two most recent  
 1-Minutes:  $ABS(59.979 - 60.027) = 0.048\text{Hz} > 0.034\text{Hz}$

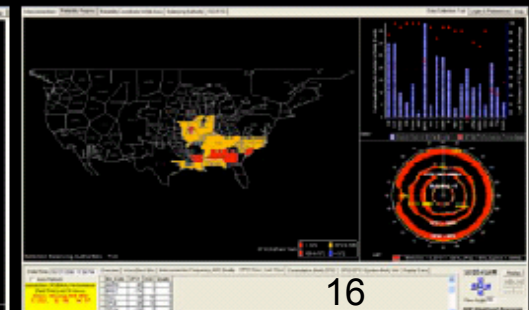

## C WIDE-AREA SITUATIONAL AWARENESS

## D WIDE-AREA REAL TIME MONITORING

## E ANALYSIS - ASSESSMENT

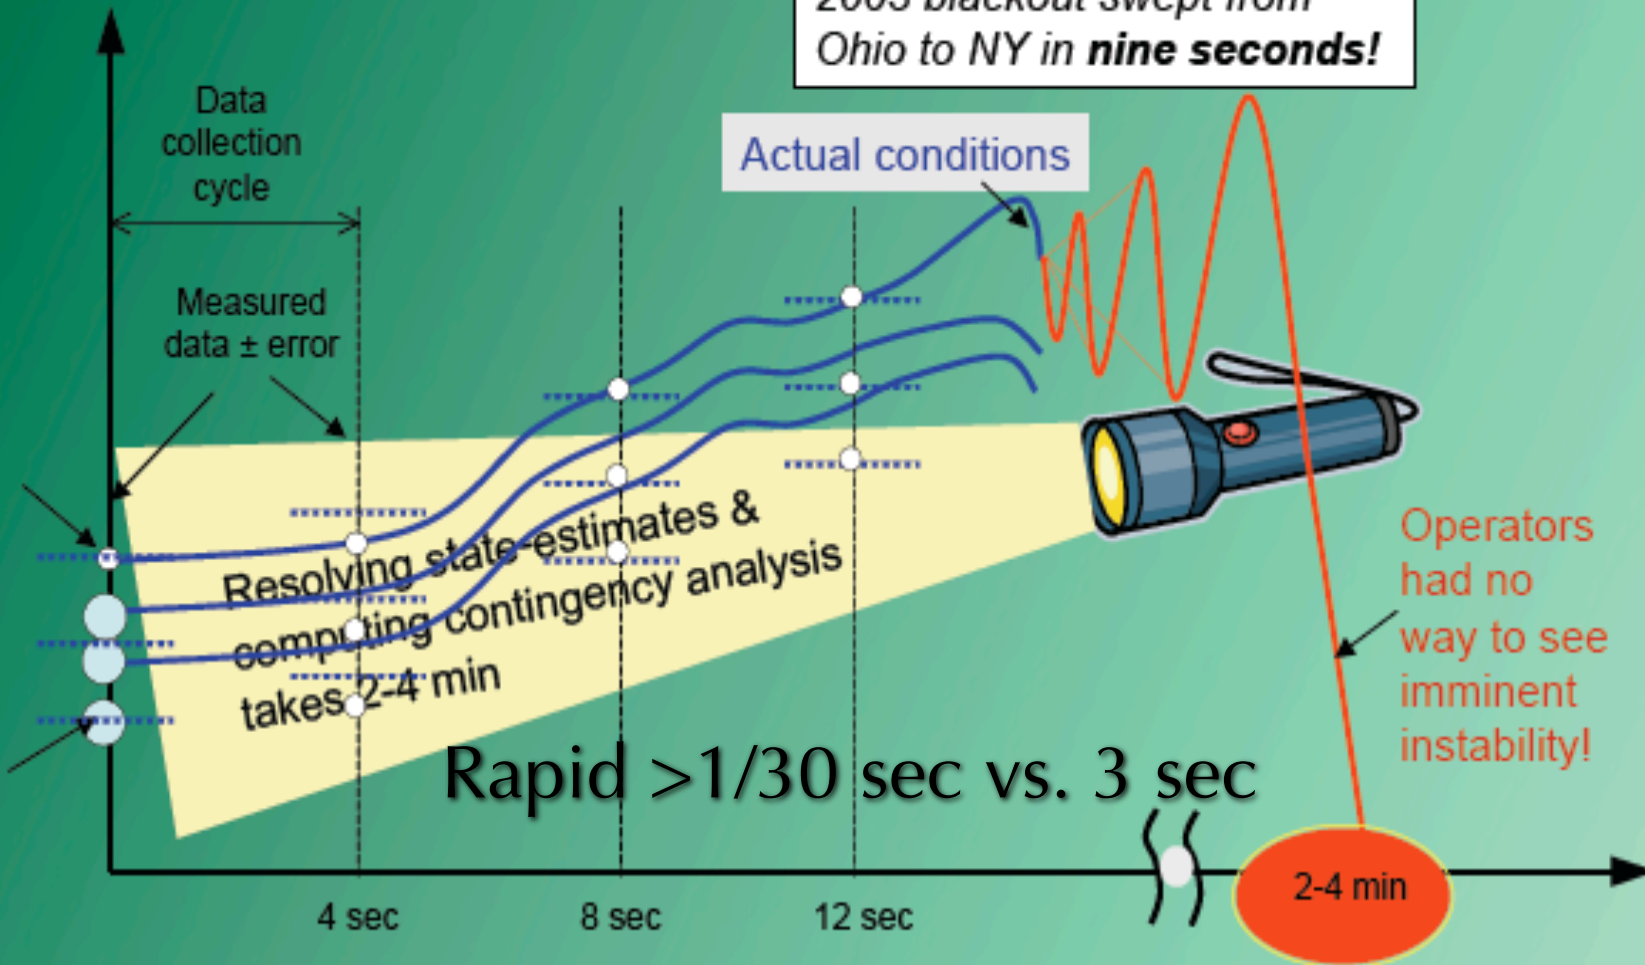

# Grid Efficiency – 2003 Blackout

PMUs at Transmission Level

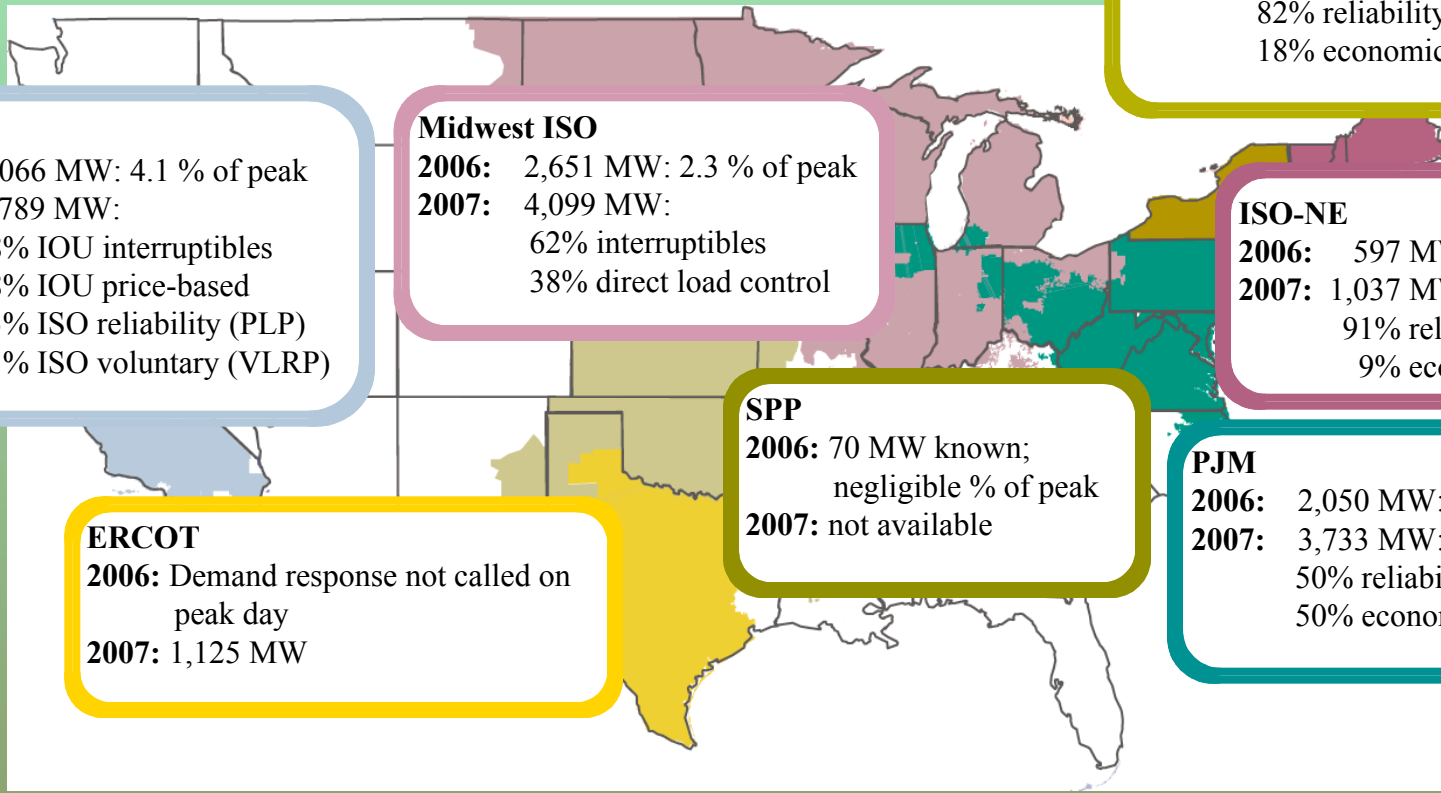

Once the cascade began, the 2003 blackout swept from Ohio to NY in **nine seconds!**

# **FERC ACTION ON WHOLESALE MARKET PLATFORM FOR DEMAND RESOURCES**

- **Demand Resources Participate in Energy markets:**
  - **ISO-NE, NYISO, PJM Currently**
  - **MISO, CAISO, SPP in Development**
  
- **Demand Resources in Ancillary Services Markets:**
  - **ISO-NE, NYISO, PJM**
  - **MISO, CAISO in Development**
  
- **Demand Resources in Capacity Markets:**
  - **ISO-NE's Forward Capacity Market Auction**
  - **NYISO's Special Case Resource Auctions**
  - **PJM's Reliability Pricing Model Auctions**

# Summer 2006 Demand Response Contributions and Summer 2007 Program Enrollment

## CAISO

**2006:** ~2,066 MW: 4.1 % of peak  
**2007:** 2,789 MW:  
58% IOU interruptibles  
38% IOU price-based  
3% ISO reliability (PLP)  
1% ISO voluntary (VLRP)

## Midwest ISO

**2006:** 2,651 MW: 2.3 % of peak  
**2007:** 4,099 MW:  
62% interruptibles  
38% direct load control

## NYISO

**2006:** 948 MW: 2.8 % of peak  
**2007:** 2,199 MW:  
82% reliability  
18% economic

## ISO-NE

**2006:** 597 MW: 2.1 % of peak  
**2007:** 1,037 MW:  
91% reliability  
9% economic

## SPP

**2006:** 70 MW known;  
negligible % of peak  
**2007:** not available

## PJM

**2006:** 2,050 MW: 1.4 % of peak  
**2007:** 3,733 MW:  
50% reliability  
50% economic

## ERCOT

**2006:** Demand response not called on  
peak day  
**2007:** 1,125 MW

# PJM Demand Response

# PJM Demand Response

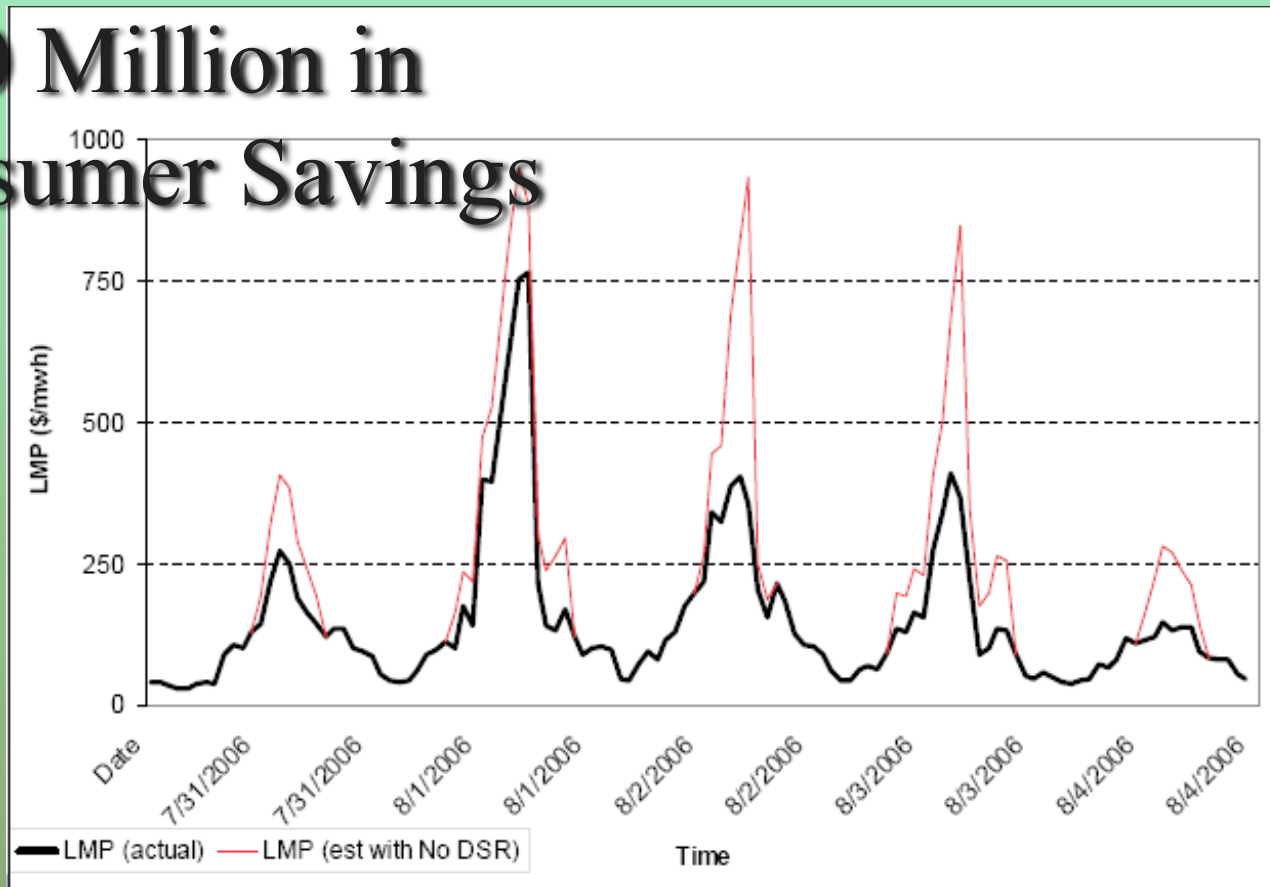

Yearly Payments to Curtailment Service Providers

# Smart Grid Benefits

## PJM Demand Response

**\$650 Million in  
Consumer Savings**

# FERC Action Regional Transmission Planning\*

- **Regional Transmission Planning**
  - **Use/Consider Comparable to Central Generation**
    - Demand Response
    - Energy Efficiency
    - Distributed Generation
    - Smart Grid Upgrades and Grid Operation Optimization

*\* OATT Reform  
Order 890 (February 2007)*

# Smart Grid Costs vs. Benefits

Target Sector Costs	10-Year Investment Level (\$B)
Residential	7-10
Commercial	13-20
Network Infrastructure	\$25-30
<b>TOTAL</b>	<b>45-60</b>

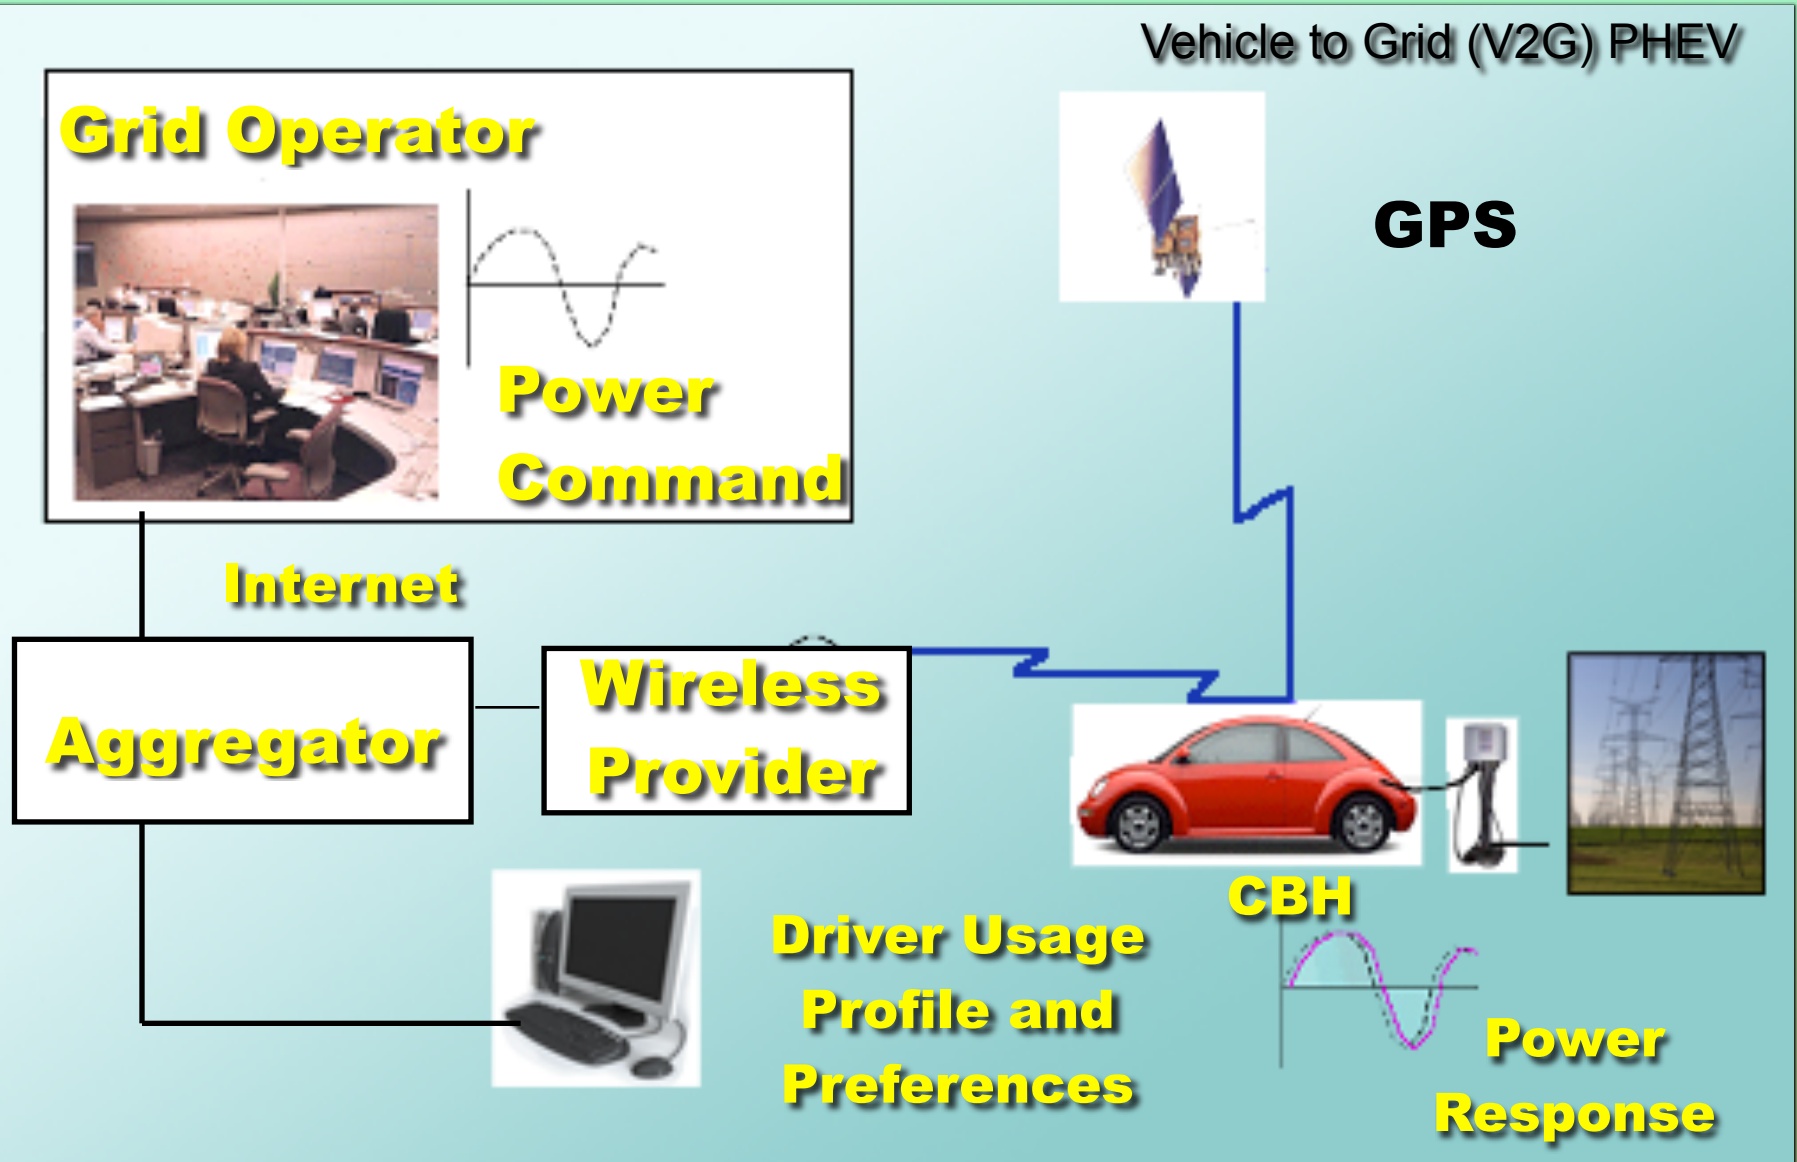

Source of Benefits	Potential Benefits/year (\$B, by 2015)
<b>“Smarting up” of customer premises (smart homes, intelligent buildings)</b>	<b>\$6-8</b>
<b>Enabling of Demand Response and AMI deployment</b>	<b>\$5-8</b>
<b>Investments in smart grid technologies</b>	<b>\$2-3</b>
<b>DG, smart grid-interactive storage technologies and microgrids</b>	<b>\$1-2</b>
<b>TOTAL/year</b>	<b>14-21</b>

# Smart Transportation

# Smart Transportation Interface

# PHEV V2G Benefits

## Efficient Grid Management

- **Ancillary Services (Spinning Reserve & Regulation)**
- **Dispatchable Reactive Power**
- **Peak Demand Services (Demand Response)**
- **Reduced Operating and Planning Reserves**
- **Distribution/Substation Level Support**
- **Reduced Line Losses**
- **Improved Power Plant Efficiency**
- **Improved Load Factor**

# PHEV Grid Efficiency

**THANK YOU!**
