

NCI's Clinical Trials Cooperative Groups National Meetings Report

Winter 2009

In This Issue

ACRIN Fall, ASCO Breast Cancer Symposium, ASH, ASTRO, EORTC-NCI-AACR Symposium on Molecular Targets & Cancer Therapeutics, ESTRO27, ISOQOL, SABCS , SIOP, SNO, & Others

Cooperative Group Abstracts:

[Breast Cancer](#)
[CNS Cancer](#)
[Gastrointestinal Cancer](#)
[Genitourinary Cancer](#)
[Gynecologic Cancer](#)
[Head and Neck Cancer](#)
[Leukemia, Myelodysplasia, and Transplantation](#)
[Lung Cancer](#)
[Lymphoma and Plasma Cell Disorders](#)
[Sarcoma/Bone and Soft Tissue Cancers](#)
[Other Cancer](#)

NCI/CTEP Abstracts & Activities:

[DCTD/DCP Abstracts](#)
[DCTD and DCP Activities](#)

The Clinical Trials Cooperative Group Program, sponsored by the National Cancer Institute (NCI), is designed to promote and support clinical trials of new cancer treatments, cancer control and prevention strategies, quality-of-life issues during and after interventions, as well as cancer imaging trials that target therapy, surveillance, and biomarkers of therapeutic responses. An issue of this report will be distributed biannually in July (post AMI, AACR, ACRIN, ASCO and SNM) and in January (post ASCO Breast Symposium, ASH, ASTRO, ISOQOL, RSNA, SABCS, SGO and AMI/SMI joint meeting) to highlight the research presentations of the Cooperative Groups and the supporting activities of NCI investigators from the Division of Cancer Treatment and Diagnosis - Cancer Therapy Evaluation Program, Cancer Diagnosis Program, Cancer Imaging Program and Radiation Research Program, and from the Division of Cancer Prevention.

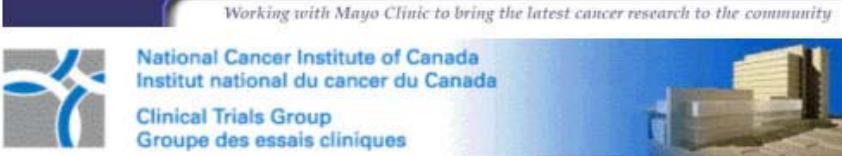

Research Highlights in this Issue:

NSABP-B-30: The National Surgical Adjuvant Breast and Bowel Project (NSABP), in NSABP-B-30 found that 4 cycles of concurrent TAC was inferior to sequential AC-T for overall survival and disease-free survival. "This result, combined with the results from the Eiermann study, has huge implications for the length of treatment with this regimen," said NSABP B-30 principal investigator Sandra Swain, MD, from the Washington Cancer Institute, in Washington, DC. "If you are going to use TAC, use 6 cycles," she summarized. The NSABP B30 study is important. Giving TAC for 4 cycles was part of the experimental nature of this study, and these results indicate once again that duration matters within the context of each regimen we use. (*Breast Cancer/NSABP/Swain et al.*)

POG-9906: COG researchers collaborated with researchers from St. Jude Children's Research Hospital, the University of New Mexico, and NCI as part of the Childhood Cancer TARGET Initiative to discover that the Ikaros gene (IKZF1) is altered in approximately 25% of children with high-risk ALL and is a highly significant independent predictor of poor outcome. The gene expression signature of IKZF1-mutated BCR-ABL1 negative ALL is closely related to that of BCR-ABL1 positive ALL, an observation with potential therapeutic significance. (*Leukemia, Myelodyplasia, and Transplantation/COG/Mullighan et al.*)

Disclaimer: References to abstracts included in this report are based on information provided to the EMMES Corporation (CTEP/NCI contractor) by the individual Cooperative Groups and may not reflect all abstracts accepted or presented at the indicated meetings. Inclusion of references under specific subheadings for Cooperative Group is based on information provided, associated trials and information in references. References will appear under only one disease heading chosen as the primary disease but will appear under as many Cooperative Group subheadings as is applicable. Abstracts that cannot be associated with DCTD (CTEP, CIP, RRP or CDP) or DCP sponsored clinical trials or for which required information was not made available are excluded. Abstracts from other relevant symposia in the same time period as the indicated meetings may also be included upon agreement and provided the required information is available. Links to online abstracts have been provided where they were available at the time of publication but there is no guarantee that these links will remain active.
