Table 1-7. Total Fertility Rates and Birth Rates, by Age of Mother and Race: United States, 1940-2003

(Total fertility rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5. Birth rates are live births per 1,000 women in specified group. Population enumerated as of April 1 for census years and estimated as of July 1 for all other years. Beginning in 1970, excludes births to nonresidents of the United States; "see Technical Appendix.")

* Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

(1) Beginning in 1997, rates computed by relating births to women aged 45-54 years to women aged 45-49 years.

(2) For 1970-91 includes births to races not shown separately.

(3) Based on 100 percent of births in selected states and on a 50-percent sample of births in all other states; see "Technical Appendix."

(4) Based on a 50-percent sample of births.

(5) Based on a 20- to 50-percent sample of births.

(6) Figures exclude data for residents of New Jersey; see "Technical Appendix."

(7) For method of adjustment see "Technical Appendix."

(8) Includes births to Aleuts and Eskimos.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with the 1977 Office of Management and Budget standards. In this table all women (including Hispanic women) are classified only according to their race; see "Technical Appendix." Six states reported multiple-race data for 2003. The multiple-race data for these states were bridged to the single-race categories of the 1977 Office of Management and Budget standards for comparability with other states; see "Technical Appendix."
