LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., March 10, 1916.

SIR:

I transmit herewith the annual report on mortality statistics for 1914, which is the fifteenth annual compilation of such statistics prepared by the Bureau of the Census. It is based on transcripts from the records of the registration area, which in 1914 had an estimated population of 65,989,295, or 66.8 per cent of the total estimated population of the United States. The number of deaths registered was 898,059, corresponding to a death rate of 13.6 per 1,000 population, the lowest ever recorded for the registration area.

Kansas was admitted to the registration area for deaths for 1914, and during 1915 excellent laws for the registration of births and deaths were enacted in the states of Florida and Illinois.

This report was prepared under the direction of Mr. Richard C. Lappin, chief statistician for vital statistics, assisted by Mr. George H. Van Buren, expert chief of division.

Respectfully,

Sam. L. Rogers

Director of the Census.

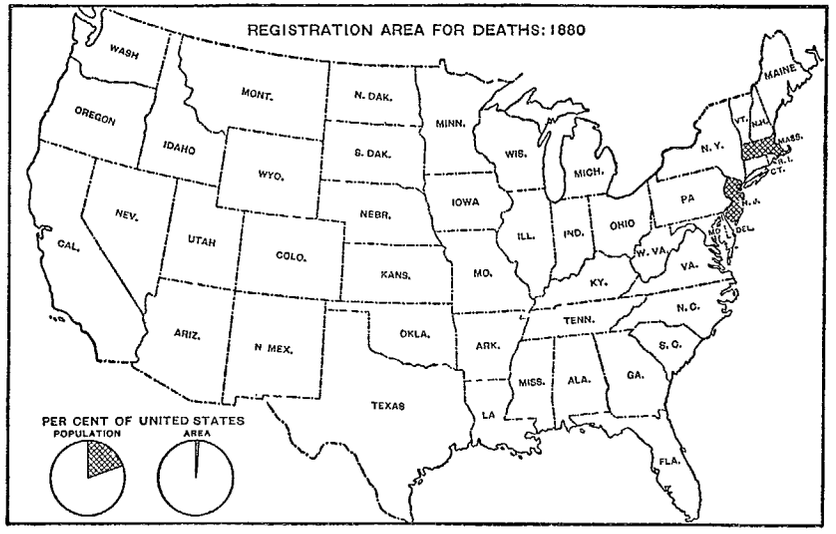
To Hon. WILLIAM C. REDFIELD,
Secretary of Commerce.

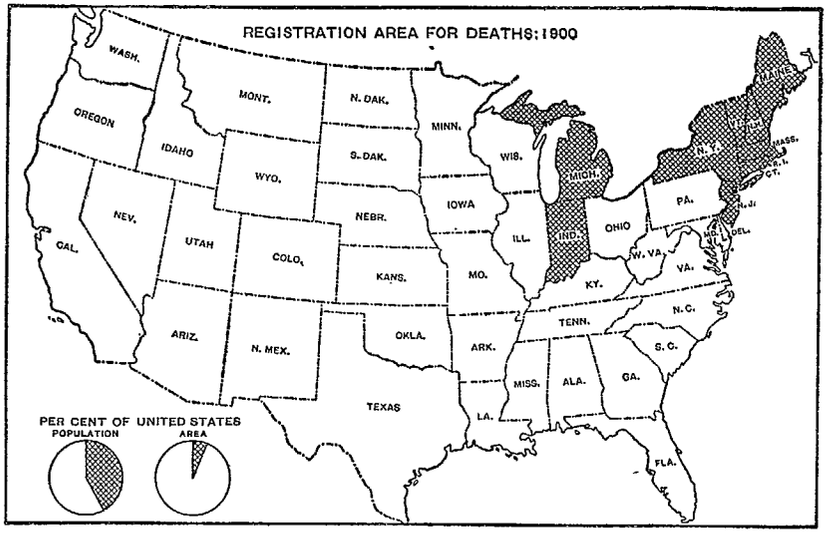
MORTALITY STATISTICS

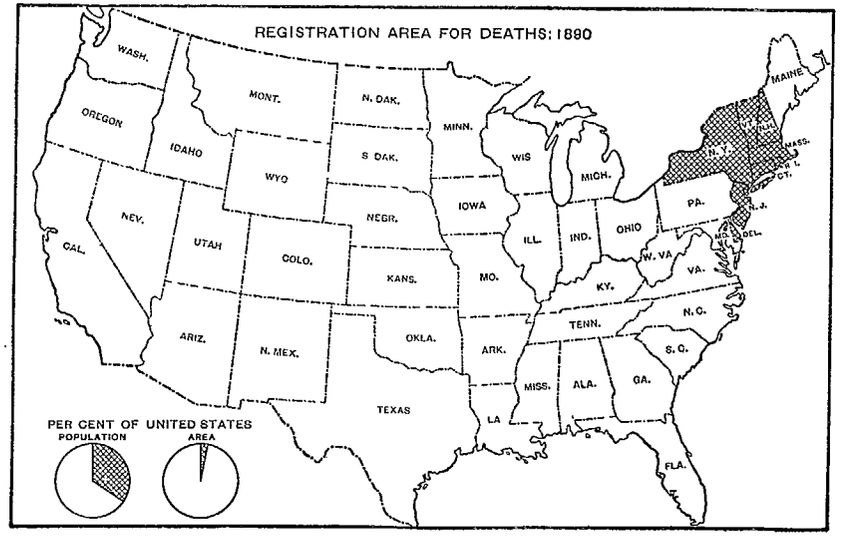
1914

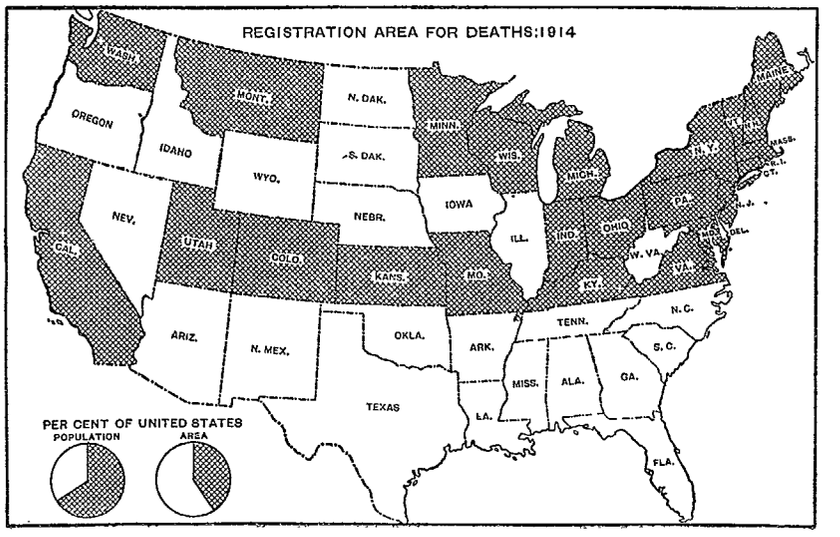
GROWTH OF THE REGISTRATION AREA FOR DEATHS: 1880–1914.

NOTE.—In addition to the registration states (shaded in the cartograms) the registration area included certain cities in nonregistration states.









MORTALITY STATISTICS: 1914.

DEATHS AND CRUDE DEATH RATES.

The total number of deaths returned from the registration area of the United States for the year 1914 was 898,059. The estimated midyear population of this area was 65,989,295, or 66.8 per cent of the total estimated population of the United States. The death rate for the year was 13.6 per 1,000 of population, the lowest on record since the establishment of the registration area in 1880.

The following table shows the number of deaths and the death rates per 1,000 of population for the census years ended May 31, 1880, 1890, and 1900, and for the calendar years 1900 to 1914:

YEAR.	DEATHS FROM ALL CAUSES,[1] REGISTRATION AREA.		YEAR.	DEATHS FROM ALL CAUSES,[1] REGISTRATION AREA.	
	Number.	Rate per 1,000 population.		Number.	Rate per 1,000 population.
1914	898,059	13.6	1905	545,533	16.0
1913	890,848	14.1	1904	551,354	16.5
1912	838,251	13.9	1903	524,415	16.0
1911	839,284	14.2	1902	508,640	15.9
1910	805,412	15.0	1901	518,207	16.5
1909	732,538	14.4	1900	539,939	17.6
1908	691,574	14.8	1900[2]	512,669	17.8
1907	687,034	16.0	1890[2]	386,212	19.6
1906	658,105	15.7	1880[2]	169,453	19.8

[1] Exclusive of stillbirths. [2] Census year ended May 31.

GROWTH OF THE REGISTRATION AREA: 1880 TO 1914.

The series of annual reports began with the year 1900, following the series of decennial reports, which began with the report of the Seventh Census, for 1850, and terminated with that of the Twelfth Census, for the year ended May 31, 1900. The registration area was established in 1880, and then comprised the states of Massachusetts and New Jersey, the District of Columbia, and a number of cities in nonregistration states, the population of the entire area being 8,538,366, or 17 per cent of the total population of the United States. Connecticut, Delaware, New Hampshire, New York, Rhode Island, and Vermont, and a number of cities in nonregistration states, were added in 1890, nearly doubling the percentage of population (31.4) included. In 1900, for the census year ended May 31, two more states, Maine and Michigan, and a number of cities in nonregistration states, were brought into the area and Delaware was dropped, the percentage of population included being thereby increased to 37.9.

With the beginning of annual mortality reports and the discontinuance of the decennial series, Indiana became a registration state, and the percentage of population included in the registration area was raised to 40.5. Thereafter there was little or no increase in the area until 1906, when California, Colorado, Maryland, Pennsylvania, and South Dakota (since discontinued) were admitted, bringing the percentage up to 48.9. The next addition was in 1908, when Washington and Wisconsin became registration states, and at last over one-half of the population of the United States (52.5 per cent, according to the estimates for that year) was included in the area. The proportion continued to increase with the admission of Ohio in 1909; Minnesota, Montana, Utah, and the North Carolina municipalities, which had in 1900 a population of 1,000 or more, in 1910; Kentucky and Missouri in 1911; Virginia in 1913; and Kansas in 1914, in which year the estimated population of the registration area represented 66.8 per cent of the total for the United States.

The growth of the registration area in population and in square miles from 1880 to 1914, inclusive, is shown in the following table:

YEAR.	POPULATION AND LAND AREA OF THE UNITED STATES.		REGISTRATION AREA FOR DEATHS.			
			Population.		Land area.	
	Population.	Land area (square miles).	Number.	Per cent of total.	Square miles.	Per cent of total.

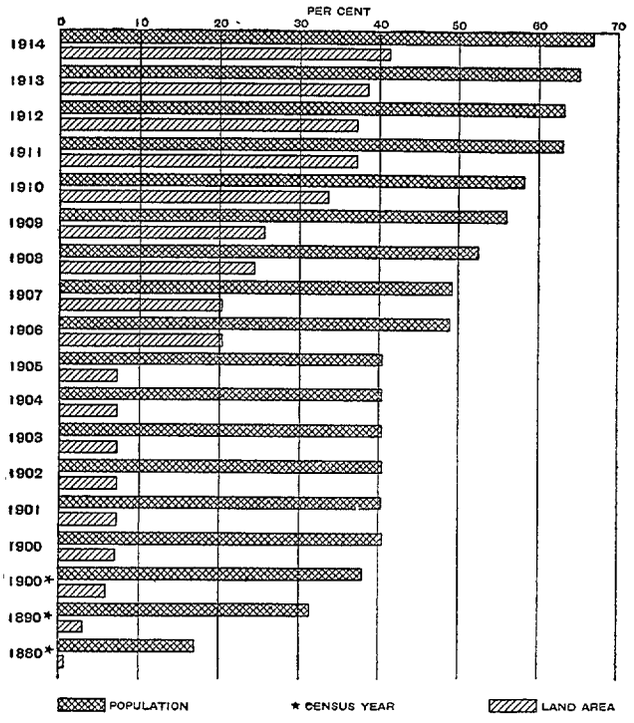
Calendar year 1880[2]	50,155,783	2,973,965	8,538,366	17.0	16,481	0.6

[1] Net reduction of 269 square miles as compared with area stated by census of 1900, due to drainage of lakes and swamps in Illinois and Indiana, building of the Roosevelt and Laguna Reservoirs, and overflow of the Colorado River into the Salton Sea in California.
[2] Ended May 31.

The percentages which the population and the land area of the registration area formed of the total population and land area of the United States for the

years 1880, 1890, and 1900 to 1914, inclusive, are presented in the following diagram:

PERCENTAGES WHICH THE POPULATION AND LAND AREA OF THE REGISTRATION AREA FORMED OF THE TOTAL POPULATION AND LAND AREA OF THE UNITED STATES FOR THE YEARS 1880, 1890, AND 1900 TO 1914, INCLUSIVE.



EXTENT OF THE REGISTRATION AREA IN 1914.

The registration area in 1914 was composed of 25 states, the District of Columbia, and 32 cities in nonregistration states. Included among the registration states, however, is North Carolina, the returns from which relate only to the municipalities having 1,000 population and over in 1910. These states and cities were admitted to the registration area only after it appeared, from such evidence as was available, that their returns were approximately complete; that is to say, that at least 90 per cent of all deaths were properly recorded under state law or municipal ordinance, and transcripts of the records were furnished the Bureau of the Census.

The following states are included in the registration area for 1914:

California.
Colorado.
Connecticut.
Indiana.
Kansas.
Kentucky.
Maine.
Maryland.
Massachusetts.
Michigan.
Minnesota.
Missouri.
Montana.
New Hampshire.
New Jersey.
New York.
North Carolina (municipalities of 1,000 population or over in 1910).
Ohio.
Pennsylvania.
Rhode Island.
Utah.
Vermont.
Virginia.
Washington.
Wisconsin.

The entire area comprises the above-named states, the District of Columbia, and the following-named registration cities in nonregistration states:

Alabama:
  Birmingham.
  Mobile.
  Montgomery.
Delaware:
  Wilmington.
Florida:
  Jacksonville.
  Key West.
  Pensacola.
Georgia:
  Atlanta.
  Augusta.
  Savannah.
Illinois:
  Aurora.
  Belleville.
  Chicago.
  Decatur.
  Evanston.
  Jacksonville.
  Quincy.
  Springfield.
Louisiana:
  New Orleans.
Nebraska:
  Lincoln.
  Omaha.
Oregon:
  Portland.
South Carolina:
  Charleston.
Tennessee:
  Chattanooga.
  Jackson.
  Knoxville.
  Memphis.
  Nashville.
Texas:
  El Paso.
  Galveston.
  San Antonio.
West Virginia:
  Wheeling.

COLOR, NATIVITY, PARENT NATIVITY, AGE, AND SEX OF DECEDENT.

Of the 898,059 deaths in the registration area in 1914, 491,416, or 54.7 per cent, were of males and 406,643, or 45.3 per cent, were of females; and 824,319, or 91.8 per cent, were of whites and 73,740, or 8.2 per cent, were of colored persons. Of the total deaths, 70,429, or 7.8 per cent, were of Negroes, 1,018 were of Chinese, 904 were of Japanese, and 1,369 were of Indians. Further comparisons of these groups may be made from the following table:

COLOR, NATIVITY, AND PARENT NATIVITY.	DEATHS FROM ALL CAUSES,[1] REGISTRATION AREA: 1914.					
	Number.			Distribution per 1,000.		
	Total.	Male.	Female.	Total.	Male.	Female.
Aggregate	898,059	491,416	406,643	1,000.0	1,000.0	1,000.0
White	824,319	452,272	372,047	917.9	920.3	914.9
Native	605,349	325,818	279,531	674.1	663.0	687.4
Both parents native	327,696	172,096	155,600	364.9	350.2	382.6
One or both parents foreign born	203,189	111,645	91,544	226.3	227.2	225.1
Parentage unknown	74,464	42,077	32,387	82.9	85.6	79.6

Indian	1,369	716	653	1.5	1.5	1.6
Other colored [2]	20	17	3	[3]	[3]	[3]

[1] Exclusive of stillbirths.
[2] Including 7 Hindus, 5 Hawaiians, 4 Koreans, 3 Filipinos, and 1 Malay.
[3] Less than one-tenth of 1 per 1,000.

The general age distribution of the decedents is shown in the following table. As in earlier years, large proportions of the deaths reported are of infants under 1 year of age and of children under 5—155,075, or 17.3 per cent, and 214,120, or 23.8 per cent, respectively. These percentages, however, are somewhat lower than the corresponding ones for 1913—17.9 for infants under 1 year and 25.3 for children under 5 years of age.

AGE OF DECEDENT.	DEATHS FROM ALL CAUSES,[1] REGISTRATION AREA: 1914. Number. Total.	Male.	Female.	Distribution per 1,000. Total.	Male.	Female.
All ages	898,059	491,416	406,643	1,000.0	1,000.0	1,000.0

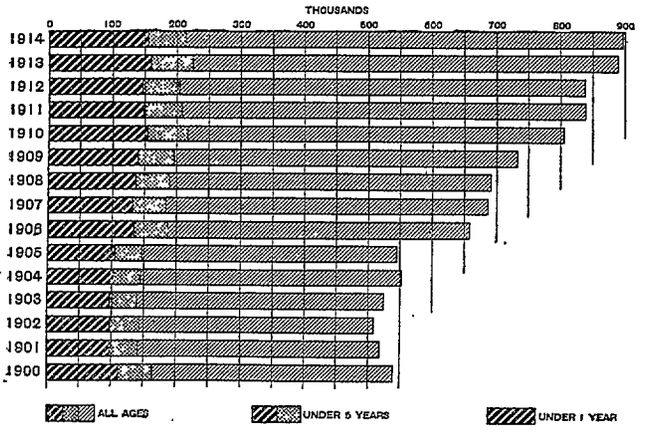
1902	508,640	98,575	143,515
1901	518,207	97,477	141,678
1900	539,939	111,687	164,137

[1] Exclusive of stillbirths.

NUMBER OF DEATHS IN THE REGISTRATION AREA AT ALL AGES, UNDER 1 YEAR OF AGE, AND UNDER 5 YEARS OF AGE, FOR EACH OF THE YEARS 1900 TO 1914.



DEATH RATES OF THE REGISTRATION AREA.

The following table shows the death rates of the registration area, with its main subdivisions, for the years 1911 to 1914 and the annual averages for the quinquennial periods 1901 to 1905 and 1906 to 1910:

AREA.	DEATH RATE FROM ALL CAUSES[1] PER 1,000 POPULATION. 1914	1913	1912	1911	Annual average. 1906 to 1910	1901 to 1905
The registration area	13.6	14.1	13.9	14.2	15.1	16.2
Registration states[2]	13.4	13.9	13.6	13.9	15.0	15.9
Cities in registration states[2]	14.5	15.0	14.7	15.1	16.3	17.4
Rural part of registration states	12.3	12.7	12.4	12.7	13.4	14.1
Registration cities in other states	16.0	16.3	16.6	16.9	15.9	16.6
All registration cities[2]	14.7	15.2	15.0	15.3	16.2	17.0

[1] Exclusive of stillbirths. [2] Including District of Columbia.

The state of Kansas was added to the registration area for 1914.

For the area as a whole and for each of its main subdivisions, with the exception of registration cities in nonregistration states, the death rates for 1914 were lower than for any other year or period shown in the table.

A more satisfactory comparison, because relating to the same area throughout the entire period covered, is given in the following table, which presents, with respect to the group of registration states as constituted in 1900, for the years and periods shown in the preceding table, the crude death rates for the entire group of states and for the cities and rural portions separately.

AREA.	DEATH RATE FROM ALL CAUSES[1] PER 1,000 POPULATION. 1914	1913	1912	1911	Annual average. 1906 to 1910	1901 to 1905
Registration states,[2] 1900	14.4	14.7	14.6	14.9	15.5	15.9
Cities[2]	14.7	15.1	14.9	15.4	16.4	17.4
Rural districts	14.0	14.1	13.9	14.3	14.2	14.1

[1] Exclusive of stillbirths. [2] Including District of Columbia.

The group of registration states covered by the first annual mortality report, namely, that for the calendar year 1900, comprised Connecticut, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Rhode Island, Vermont, and the District of Columbia. This group is commonly referred to as the "original registration states." Their total population, approximating 20,000,000 in 1900 and 25,800,000 in 1914, represents for each year about the same proportion—slightly over 26 per cent—of

the entire population of the United States. For this considerable portion of the country the registration of deaths should be considered to be somewhat more complete than for the registration area as a whole. The death rate of the rural districts shows but slight changes during the period to which the comparison relates, the reduction for the group of states being due entirely to the decrease of the rate in the cities which has resulted, at least in part, from the enactment and enforcement of stricter sanitary laws and from various movements and campaigns carried on for the purpose of safeguarding life and health.

DEATH RATES OF THE REGISTRATION STATES.

The following table presents the general or crude death rates for the states included in the registration area for 1914, with comparative figures for the three years preceding and for the quinquennial periods 1901 to 1905 and 1906 to 1910:

STATE.	DEATH RATE FROM ALL CAUSES[1] PER 1,000 POPULATION.					
	1914	1913	1912	1911	Annual average. 1906 to 1910	Annual average. 1901 to 1905
Registration states[2]	13.4	13.9	13.6	13.9	15.0	15.9
California	13.6	14.5	14.2	13.7	13.9	(3)
Colorado	11.2	11.5	11.6	12.9	14.3	(3)
Connecticut	15.1	15.0	14.9	15.4	15.6	15.7
Indiana	12.9	13.3	13.0	12.9	13.0	13.2
Kansas	[4] 9.8	(3)	(3)	(3)	(3)	(3)
Kentucky	12.9	13.1	12.9	13.2	(3)	(3)

Maryland	15.9	16.2	15.5	15.8	16.0	(3)
Massachusetts	14.7	15.0	15.0	15.3	16.1	16.6
Michigan	13.4	13.9	13.4	13.2	13.6	13.3
Minnesota	10.6	10.4	9.5	10 5	(5)	(3)
Missouri	12.3	12.4	12.6	13.1	(3)	(3)
Montana	11.2	12.0	10.1	10.2	(5)	(3)
New Hampshire	16.3	17.1	16.4	17.1	17.2	16.6
New Jersey	14.2	14.3	14.1	14.7	15.4	16.1
New York	14.7	15.0	15.0	15.5	16.4	17.1
North Carolina[6]	19.0	16.8	17.3	18.3	(5)	(3)
Ohio	13.0	13.8	13.4	13.1	(5)	(3)
Pennsylvania	13.9	14.6	14.0	14.2	15.5	(3)
Rhode Island	14.7	15.0	15.2	15.5	16.7	17.8
Utah	10.1	11.0	9.9	10.3	(5)	(3)
Vermont	15.0	15.8	15.2	15.8	16.1	16.2
Virginia	14.0	13.9	(3)	(3)	(3)	(3)
Washington	[4] 8.1	[4] 8.5	[4] 7.9	[4] 8.9	(5)	(3)
Wisconsin	11.1	11.5	11.3	11.5	(5)	(3)

[1] Exclusive of stillbirths.
[2] Including District of Columbia.
[3] Not admitted to registration area until a later date.
[4] These rates are based on estimates of population computed on the assumption that the annual numerical increase since 1910 has been the same as the average annual numerical increase between 1900 and 1910. This method probably results, in the cases of the states and the years indicated, in an exaggeration of the estimated population and a consequent reduction of the apparent death rate below the true figure.
[5] Figures for deaths not available for the entire period.
[6] The figures for the years prior to 1914 relate only to municipalities having 1,000 inhabitants or more in 1900; for 1914 they relate to municipalities having 1,000 inhabitants or more in 1910.

Most of the states show, for 1914, a slight reduction as compared with the preceding year. The highest rate appearing for 1914 is that for North Carolina (19), which relates only to municipalities having 1,000 inhabitants or more in 1910; and the next highest are those for New Hampshire (16.3) and Maryland (15.9). The lowest are those for Washington (8.1) and Kansas (9.8). The rates for these two states, and especially for the former, are probably too low, since it is likely that the estimates of population on which they are based are too high. As explained in footnote 4, census estimates of population are computed on the assumption that the annual numerical increase since 1910 has been the same as the average annual numerical increase between 1900 and 1910. This method of calculation, although it has been demonstrated to produce, in the majority of cases, closer approximations to accuracy than can be obtained by any other method which has yet been devised, necessarily results in exaggerated estimates for some areas.

It should be remembered that these are crude rates, which make no allowance for differences in the sex, age, and color distribution of the population. Care should be taken, therefore, not to give too great weight to the figures shown for certain states, especially those in which the registration laws have been in operation for only a short time. It is possible, and even probable, that the degree of completeness with which deaths are recorded varies to a considerable extent in different states; hence the inference that one state is more healthful than another should not be drawn without more thorough investigation.

DEATH RATES OF LARGE CITIES.

The following table shows the death rates per 1,000 of population in registration cities which had 100,000 inhabitants or more in 1910, for each of the four years 1911 to 1914, together with the annual averages for the five-year periods 1901 to 1905 and 1906 to 1910. For the cities in which the colored population formed 10 per cent or more of the total, the rates are shown separately for the aggregate, white, and colored populations.

As in the case of the states, caution must be exercised in comparing these crude death rates. The cities with a considerable proportion of colored population are usually found to show higher death rates than other cities. If the sex and age constitution of the population, as well as the racial constitution, were also taken into consideration, many of the differences which appear among the rates for the various cities would be accounted for in the whole or in part. Furthermore, as deaths of nonresidents are included, certain cities to which invalids resort for treatment of tuberculosis and other diseases show much higher rates than if the statistics related only to the resident population.

For 33 of the 50 registration cities which had 100,000 or more inhabitants in 1910, the rate for 1914 was lower than that for the preceding year; and for 28 of the 49 for which comparisons can be made between the two five-year periods, the rate for the later period, 1906 to 1910, was lower than for the earlier.

CITY	DEATH RATE FROM ALL CAUSES [1] PER 1,000 POPULATION.

[1] Exclusive of stillbirths.
[2] Average not shown for less than five years.
[3] Not admitted to registration area until 1908.
[4] From 1900 to 1910 all deaths were charged to the boroughs in which they occurred; beginning with 1911, deaths which occurred in boroughs other than those of residence, were distributed to the boroughs of residence.
[5] Includes Allegheny for the five-year period.
[6] Including Manchester for the years 1908 to 1910.
[7] Excluding Manchester for the years 1908 to 1910.
[8] These rates are based on estimates of population computed on the assumption that the annual numerical increase since 1910 has been the same as the average annual numerical increase between 1900 and 1910. This method probably results, in the cases of the cities and the years indicated, in an exaggeration of the estimated population and a consequent reduction of the apparent death rate below the true figure.

DEATH RATES OF FOREIGN COUNTRIES AND CITIES.

The following tables, taken from the latest report of the Registrar-General of England and Wales, for 1913, show the average annual death rates of most of the countries and a considerable number of the large cities of Europe, and of certain other countries and cities, for each of the six five-year periods from 1881 to 1910, together with the rates for 1912 and 1913. They also show the per cent of decrease in the average annual rates between the two five-year periods 1881 to 1885 and 1906 to 1910:

COUNTRY.	ANNUAL CRUDE DEATH RATE [1] PER 1,000 PERSONS LIVING.								Decrease per cent between 1881 to 1885 and 1906 to 1910.
	1913	1912	1906 to 1910	1901 to 1905	1896 to 1900	1891 to 1895	1886 to 1890	1881 to 1885

[1] Figures not available.

NOTE.—The 1913 figures for most of the foreign cities are provisional and in some cases relate to a period of 53 weeks.

The following table, also taken from the latest report of the Registrar-General of England and Wales, presents the crude death rates per 1,000 of population for certain countries for each year from 1900 to 1913. These rates are graphically shown in the diagram on the following page.

COUNTRY.	DEATH RATE [1] PER 1,000 POPULATION.													
	1900	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911	1912	1913

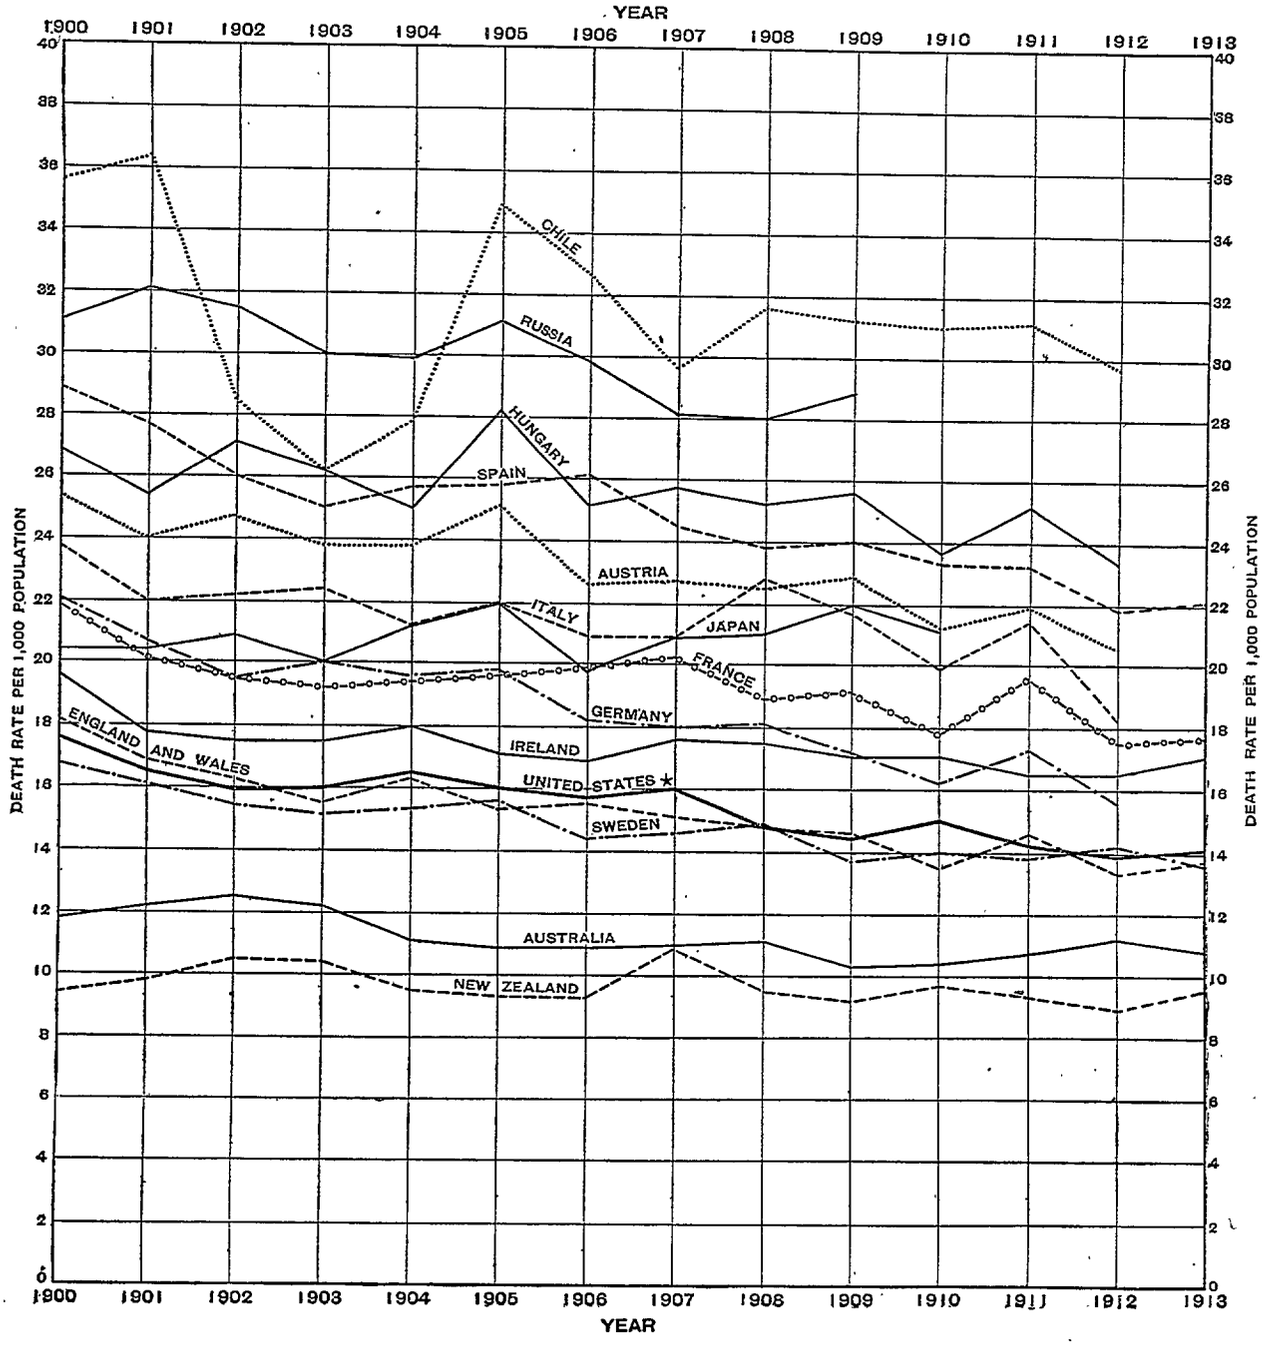
[1] Exclusive of stillbirths. [2] Data not available.

GENERAL DEATH RATES OF THE UNITED STATES (REGISTRATION AREA) AND CERTAIN FOREIGN COUNTRIES FOR EACH OF THE YEARS FROM 1900 TO 1913.



DEATH RATES OF CITIES WITH CONSIDERABLE COLORED POPULATION.

The following table shows comparative death rates of white and colored persons for cities of 10,000 and over in which the colored population constituted at least 10 per cent of the total at the census of 1910. The rates for two Kentucky cities, two Maryland cities, and El Paso, Tex., in which less than 10 per cent of the population was colored, are also given in order that all the registration cities in the South may be represented and in order that all the Kentucky and Maryland cities of 10,000 and over may be included.

CITY AND COLOR.	Per cent of total population, April 15, 1910.	DEATH RATE FROM ALL CAUSES,[1] PER 1,000 POPULATION.

[1] Exclusive of stillbirths.
[2] Average not shown for less than 5 years.
[3] Not admitted to the registration area until a later date.
[4] Census Bureau unable to procure transcripts for deaths for 1913.
[5] Not shown by color prior to 1914.
[6] Colored population less than 10 per cent of the total in 1910.
[7] Population not estimated.
[8] Including Manchester for the years 1908 to 1910.
[9] Excluding Manchester for the years 1908 to 1910.

For the above group of cities, in which the colored population formed more than one-fourth of the total, the death rate of the colored for 1914 (26.7 per 1,000) exceeded that of the white population (15.5) by 11.2, or 72.3 per cent. The corresponding excess for the quinquennial period 1906 to 1910 was 12.5, or 75.3 per cent, and for the preceding quinquennial period, 12.1, or 68.4 per cent. When the figures for individual cities are examined it is found that in 1914, as in earlier years, the rate for the colored population in nearly every instance was higher than that for the whites. There were six exceptions: Riverside, Cal., in which the colored population consisted mainly of Chinese and Japanese; Frederick, Md.; Coatesville, Pa.; El Paso and San Antonio, Tex.; and Staunton, Va. In the last-named city is located the Western State Hospital for the Insane, and the large number of deaths among the inmates of that institution accounts for the high death rate shown for the white population of the city. This fact does not, however, explain the low colored rate, which is considerably lower than that for any other Virginia city.

In addition to the cities shown in the preceding table, in which the colored population was at least 10 per cent of the total, there are other cities in which the colored inhabitants, although constituting less than 10 per cent of the total population, are still so numerous that their mortality statistics possess some interest. The following table shows the death rates among colored persons in all cities in which there were 10,000 or more colored inhabitants at the last census but in which the proportion of such inhabitants was less than 10 per cent of the total:

CITY AND COLOR.	Per cent of total population, April 15, 1910.	DEATH RATE FROM ALL CAUSES,[1] PER 1,000 POPULATION.

[1] Exclusive of stillbirths.
[2] About 40 per cent of the deaths of colored persons were those of Chinese and Japanese.
[3] Chiefly Chinese and Japanese.
[4] From 1900 to 1910 all deaths were charged to the boroughs in which they occurred; beginning with 1911, deaths which occurred in boroughs other than those of residence were distributed to the boroughs of residence.
[5] Excludes Allegheny for the five-year period.

Most of the cities listed in the preceding table are in the North, and therefore the colored death rates for these cities afford interesting comparisons with those for the cities given in the table on page 16, nearly all of which are in the South. For the group as a whole the death rates for both white and colored persons were lower than those for the group covered by the table on page 16. The rates for 1914 were 14.3 per 1,000 for white persons and 24.1 for colored. A reduction in the mortality for each class was shown for the five-year period 1906 to 1910 in comparison with the earlier five-year period, and this reduction was greater, proportionally, for the colored than for the white population. Since 1910 the decline in the rate for the white population has been continuous except for an increase of one-tenth of 1 per 1,000 between 1912 and 1913; but during the same time the rate for the colored population has shown a continuous, though slight, increase.

DEATHS OF NONRESIDENTS.

The death rates presented in preceding reports have been based on the inclusion of all deaths, both of residents and of nonresidents, which occurred in each area. Deaths in asylums for the insane and in other state institutions have been included with those of the minor civil divisions in which the population of such institutions is enumerated; and deaths in medical and surgical hospitals have been similarly treated, although patients temporarily resident in such hospitals for medical attention or operation are enumerated at their actual residences. Moreover, many deaths of persons who have journeyed from other states and cities to localities renowned for climatic advantages are included in the mortality of the latter places, although their actual sojourn there may have been very brief and the diseases from which death occurred may have been contracted at the former or usual residence.

Obviously there is an injustice, which is especially apparent in some instances, in this method of statistical procedure. For the most part it may be assumed that the deaths of nonresidents added are offset to a considerable extent by the deaths of residents which occurred in other localities; but this is true only to a very slight degree for our chief health resorts. If there existed complete registration of deaths in all parts of the United States it would be possible to allocate, according to precise and uniform rules, all deaths of nonresidents to the place of residence. This is not feasible at present, and the attempt to eliminate deaths of nonresidents therefore results in an understatement of the true mortality. It was not until 1911 that deaths of nonresidents were separately compiled in England and Wales, where there has been complete registration of vital statistics for many years. Out of a total of 527,810 deaths in England and Wales in that year, there were about 40,000 "transferable deaths," that is, deaths of persons who, having a fixed or usual residence in England or Wales, died in districts other than those in which they resided.

Registration of vital statistics in the United States has not approached so far toward completeness as it

has in many other countries, and for this reason it has not heretofore been deemed practicable to compile nonresident deaths separately from those of residents. Some proposed rules on this subject were submitted to the first meeting of the Section on Vital Statistics of the American Public Health Association, Atlantic City, 1907. This organization embraces the state and municipal public health and registration officials of the United States. It has been the desire of the Bureau of the Census to cooperate with such authorities in the development of methods of statistical practice rather than to prescribe regulations. Following are the proposed rules,[1] with indication of those which have been adopted as Rules of Statistical Practice and those which are still pending:

DEATHS OF NONRESIDENTS.

10. All deaths of transients or nonresidents occurring in a State or city should be included in the tables of total deaths. [Adopted as Rule No. 11 of 1908.]

NOTE.—It is not fair to exclude nonresidents *unless* all deaths of residents occurring elsewhere can be included; this is quite impracticable in the United States under present conditions and the large extent of nonregistration territory. No rules based on duration of actual residence of transients or nature of cause of death have been generally adopted, so that deaths of a certain character would be uniformly excluded. It is evident that the death of a nonresident of a city who succumbs to typhoid fever after living there long enough for the time to include the duration and period of incubation of the disease should be properly charged to its mortality. On the other hand, a death from pulmonary tuberculosis occurring within 1, 2, 3, . . . months after arrival, may not be properly chargeable to the mortality of the state or city. As a provisional method of treatment, the following paragraph is submitted:

11. A separate column showing "Deaths of nonresidents" may be given, which should include deaths in hospitals, institutions, and of transients and nonresidents, on whose certificate of death appears a statement of "Former or usual residence," "Where was disease contracted, if not at place of death?" and "How long at place of death?" the time stated in answer to the last question being *less than six* (?) *months and less than the duration of the disease causing death.* [Pending, 1914.]

NOTE.—The limit of residence is suggested merely as a basis for discussion. Evidently, some line of demarkation should be fixed if it is proposed to treat deaths of nonresidents upon a uniform basis. In addition to the duration of the disease causing death, its period of incubation may be considered as a factor of the decision. But, whatever plan is adopted for the special statement of deaths of nonresidents, there should be no interference with the complete statement of total deaths, inclusive of all deaths of nonresidents, as required by paragraph 10.

DEATHS IN INSTITUTIONS.

12. Deaths of residents of a city in a hospital or institution situated within the city limits should be distributed by the local registrar to the districts of residence (borough, ward, sanitary district) as far as possible. [Adopted as Rule No. 12 of 1908.]

13. Deaths of residents of a city in an institution (*e. g.*, almshouse) situated outside of the city limits, but chiefly or entirely occupied by commitments from the city, should be included in the total deaths of the city, and be distributed by the city registrar to the districts of residence as provided in paragraph 12. [Pending, 1914.]

NOTE.—This is suggested for discussion. It apparently departs from the general principle of registering a death where it occurs, and there only. On the other hand it would relieve extra-urban districts containing city institutions from an apparently excessive mortality, enable the true death rate of the city to be known, and make the statistics more comparable with future years when, with the extension of the city limits, the institution may come to be included in the urban area. The successful accomplishment of such distribution requires cooperation of local registrars, and would evidently be undesirable and unfair unless all cities included the deaths of their dependent or defective classes on the same basis. A limit of residence might require to be considered.

14. Deaths of inmates of a state or Government institution should be included in the total deaths of the area containing them; but special columns may be employed to permit the separate statement of such deaths, as in the case of nonresidents. [Pending, 1914.]

NOTE.—The alternative plan of distributing the deaths in a state institution (*e. g.*, insane asylum) to the counties or cities from which the inmates were received may be considered, or the institution may be treated as an independent registration area. In any case, if the deaths are eliminated the constituent population should also be eliminated before computing death rates.

DEATH RATES BASED ON TOTAL DEATHS.

20. Any statement of the death rate (general, crude, or gross death rate) of a state or city should be understood to be based, unless expressly qualified, upon the *total deaths, exclusive of stillbirths,* without any omission of deaths whatsoever. [Adopted as Rule No. 15 of 1908.]

At a meeting of the American Public Health Association, Colorado Springs, September 9–14, 1913, the following resolution was adopted:

Resolved, Pending the final determination as to forms of statistical tables and the adoption of definite rules of statistical practice, it is the sense of the Section on Vital Statistics of the American Public Health Association that bulletins and reports may contain (1) a statement of mortality including deaths of all persons and from all causes with corresponding death rates, and (2) a statement of mortality based on deaths of residents only with corresponding death rates, which should be accompanied with a full explanatory note as to the exact class of cases and period of time of residence covered in the exclusions.

It is easy, of course, in the compilation of a city report to discard deaths of "nonresidents;" but by varying the definition of "nonresidents" from year to year some remarkable reductions of mortality can be indicated, especially if care be taken to include as many nonresidents as possible in local enumerations or estimates of population. At present death rates exclusive of nonresidents as published in certain city reports are of little value for comparative purposes because there is no uniform basis of exclusion.

In the present report an advance step has been taken toward the separate reporting of nonresident deaths. The death rates given in this report are based, as heretofore, in accordance with Rule of Statistical Practice No. 11, adopted by the American Public Health Association in 1908, on the inclusion of all deaths, of both residents and nonresidents, which occur in each area; but in addition there is presented a table (I B, p. 42), showing, for each registration city and rural unit, the number of deaths and the death rates, both inclusive and exclusive of nonresident deaths.

[1] Quarterly Publications of the American Statistical Association, December, 1907.

Although this matter has been receiving much attention from registration officials during the past 8 or 10 years, no precise definition of nonresident deaths has yet been agreed upon. The Bureau of the Census, therefore, adopted, for use in the compilation of the 1914 statistics, the following tentative definition of the term: "A person who dies in a hospital or other institution and whose previous residence is given on the death certificate as other than in the registration district in which death occurred." As this definition included no time limit, many decedents were excluded as nonresidents who in fact were properly residents of the registration districts in which they died.

The Bureau of the Census has therefore amended this definition to read as follows: "A person who dies in a hospital or other institution, whose previous residence is given, and who lived less than one year in the registration unit in which death is compiled." This time limit will be effective in the compilation of the 1915 mortality statistics.

The population, deaths (exclusive of stillbirths), and death rates per 1,000 of population in each registration city and rural registration unit for 1914, both inclusive and exclusive of nonresident deaths, are shown in Table I B (p. 42). The figures in the columns giving deaths and death rates for residents—that is, total deaths and death rates less those for nonresidents—are not to be regarded as strictly accurate, but have been made as nearly correct as possible from the information at hand. In the use of this table it must be kept constantly in mind that deaths of residents of a given area occurring elsewhere are not included in the deaths shown for that area. The columns showing resident mortality, therefore, necessarily understate the true mortality in every case, although not to the same extent in all cases.

CAUSES OF DEATH.

Summary and rate Tables II to IV and General Tables 5 to 11 present the data on causes of death as follows:

Table II shows the deaths and death rates per 100,000 population, by causes according to the detailed International List, for the registration area, for each of the years 1911 to 1914, and the annual averages for the two five-year periods 1901 to 1905 and 1906 to 1910.

Table III gives, by color and important causes, the death rates per 100,000 population for the registration area and its main and minor subdivisions in 1914.

Table IV presents for 1914 the death rates per 100,000 population in cities and rural districts of each registration state, from each cause and class of causes.

Table 5 shows for the registration area and its subdivisions, the deaths in 1914, by color of decedent and important causes of death.

Table 6 gives the deaths in the registration area, its main subdivisions, and in the cities and rural districts of each registration state, from each cause and class of causes for the year 1914.

Table 7 presents the total deaths in the registration area from each cause and class of causes, by sex and age of decedent, for 1914.

Table 7A shows for the registration area the deaths of white persons from each cause and class of causes during 1914, according to the sex and age of the decedent.

Table 7B gives, by sex and age of decedent, the deaths of colored persons in 1914 from each cause and class of causes, in the registration area.

Table 8 shows for the registration area, the registration states, and for each registration state, the deaths in 1914, from each cause and class of causes, by age of decedent.

Table 9 presents, by age of decedent and by cause of death according to the abridged International List, the deaths which occurred during 1914 in each city of 100,000 population or over in 1910.

Table 10 gives for the registration area, the registration states, and the cities of 100,000 population or over in 1910, the deaths, by months, from important causes in 1914.

Table 11 shows for the first year of life, by days, weeks, and months, the deaths from important causes, which occurred during 1914, in the registration area, the registration states, and the cities of 100,000 or over in 1910.

DETAILED AND ABRIDGED INTERNATIONAL LISTS.

The International List of Causes of Death is made up of (1) a detailed list which serves as a basis for the presentation of deaths by disease and violence in a very specific way, and (2) an abridged list in which many of the titles are consolidations of the headings of the detailed list. The first is used for tables which show separately causes of death which it is not necessary or practicable to show in similar detail in other tables.

As mentioned in the text of former reports, the distinction between these lists should always be borne in mind in connection with the use of the tables. In some instances where the title headings are identical in the two lists the causes of death included are not the same. An example of this is title No. 19 of the detailed list, "Other epidemic diseases." Used in this sense "Other epidemic diseases" includes only those epidemic maladies which are not shown separately in titles 1 to 18 of this detailed classification; but when this same expression, "Other epidemic diseases," is used in reference to the abridged list it signifies a heading of that list which includes titles 3, 11, 14, 15, 16, 17, 18, and 19 of the detailed list. Another example is furnished by the title "Tuberculosis of the lungs." This is title No. 13 of the abridged list and title No.

28 of the detailed list. In the abridged list, however, this caption includes not only title No. 28 of the detailed list but also title No. 29, "Acute miliary tuberculosis."

In the following table are shown, for the year 1914, the number of deaths in the registration area caused by diseases and violence, grouped under each heading of the abridged International List, the corresponding death rate per 100,000 population, and the per cent distribution. In parentheses after the name of each abridged title appear the number or numbers corresponding to the title or titles of the detailed International List which it includes.

Abridged Int. List No.	CAUSE OF DEATH.[1]	DEATHS IN REGISTRATION AREA: 1914. Number.	Rate per 100,000 population.	Per cent.
	All causes[2]	898,059	1,360.9	100.0
1	Typhoid fever (1)	10,185	15.4	1.1
2	Typhus fever (2)	3	(3)	(4)
3	Malaria (4)	1,477	2.2	0.2
4	Smallpox (5)	212	0.3	(4)
5	Measles (6)	4,461	6.8	0.5
6	Scarlet fever (7)	4,340	6.6	0.5
7	Whooping cough (8)	6,816	10.3	0.8
8	Diphtheria and croup (9)	11,786	17.9	1.3
9	Influenza (10)	6,014	9.1	0.7
10	Asiatic cholera (12)			
11	Cholera nostras (13)	306	0.5	(4)
12	Other epidemic diseases (3, 11, 14, 15, 16, 17, 18, 19)	5,819	8.7	0.6
13	Tuberculosis of the lungs (28, 29)	84,366	127.8	9.4
14	Tuberculous meningitis (30)	5,410	8.2	0.6
15	Other forms of tuberculosis (31, 32, 33, 34, 35)	7,127	10.8	0.8
16	Cancer and other malignant tumors (39, 40, 41, 42, 43, 44, 45)	52,420	79.4	5.8
17	Simple meningitis (61)	5,823	8.8	0.6
18	Cerebral hemorrhage and softening (64, 65)	52,420	79.4	5.8
19	Organic diseases of the heart (79)	93,588	141.8	10.4
20	Acute bronchitis (89)	6,396	9.7	0.7
21	Chronic bronchitis (90)	5,050	7.7	0.6
22	Pneumonia (92)	51,651	78.3	5.8
23	Other diseases of the respiratory system (tuberculosis excepted) (86, 87, 88, 91, 93, 94, 95, 96, 97, 98)	40,989	62.0	4.6
24	Diseases of the stomach (cancer excepted) (102, 103)	10,537	16.0	1.2
25	Diarrhea and enteritis (under 2 years) (104)	43,532	66.0	4.8
26	Appendicitis and typhlitis (108)	8,099	12.3	0.9
27	Hernia, intestinal obstruction (109)	7,706	11.7	0.9
28	Cirrhosis of the liver (113)	8,526	12.9	0.9
29	Acute nephritis and Bright's disease (119, 120)	67,545	102.4	7.5
30	Noncancerous tumors and other diseases of the female genital organs (128, 129, 130, 131, 132)	3,971	6.0	0.4
31	Puerperal septicemia (puerperal fever, peritonitis) (137)	4,664	7.1	0.5
32	Other puerperal accidents of pregnancy and labor (134, 135, 136, 138, 139, 140, 141)	5,854	8.9	0.7
33	Congenital debility and malformations (150, 151)	52,323	79.3	5.8
34	Senility (154)	13,033	19.8	1.5
35	Violent deaths (suicide excepted) (164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186)	56,617	85.8	6.3
36	Suicide (155, 156, 157, 158, 159, 160, 161, 162, 163)	10,933	16.6	1.2
37	Other diseases (20, 21, 22, 23, 24, 25, 26, 27, 36, 37, 38, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 62, 63, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 80, 81, 82, 83, 84, 85, 99, 100, 101, 105, 106, 107, 110, 111, 112, 114, 115, 116, 117, 118, 121, 122, 123, 124, 125, 126, 127, 133, 142, 143, 144, 145, 146, 147, 148, 149, 152, 153)	140,096	212.0	15.6
38	Unknown or ill-defined diseases (187, 188, 189)	7,964	12.1	0.9

[1] Abridged International List of Causes of Death. The title or titles of the detailed International List that are included under each heading are shown by numbers in parentheses.
[2] Exclusive of stillbirths.
[3] Less than one-tenth of 1 per 100,000 population.
[4] Less than one-tenth of 1 per cent.

CHANGES IN THE DETAILED INTERNATIONAL LIST.

In the following table the first column shows the title number of the second revision of the International List, in force beginning with the year 1910; the second and third columns show the titles of the second and first revision, respectively, under which the term would have been compiled according to the rules followed during the period 1900 to 1909. In many instances the title numbers of the second revision differ from those of the same titles in the first revision. As an example of this, tetanus, the title number of which is now 24, was, under the first revision, compiled as No. 72 and was included under an entirely separate and distinct class, Diseases of the nervous system, instead of under General diseases, as at present.

CAUSE OF DEATH. [Titles in roman; terms in italics.]	TITLE OR CLASS (SECOND REVISION) UNDER WHICH INCLUDED— 1910 to 1919	1900 to 1909	Title of first revision under which formerly included.
Tetanus	24	[1] 24	72
Beriberi (new title)	27	19	19
Tuberculosis of the larynx (old title discontinued)	28	[2] I	26
Acute miliary tuberculosis (new title)	29	28	27
Scrofula (old title discontinued)	34	[3] I	35
Rickets (new title)	36	146	146

"*Asthenia*" / "*Atrophy*" / "*Debility*" / "*Exhaustion*" / "*Inanition*" / "*Malnutrition*" / "*Marasmus*" / "*Weakness*" (70 years and over)	[5] 154	189	179
Atelectasis (under 3 months)	152	151	151
Injury at birth (various forms)	152	([6])	176
Poisoning by food (new title)	164	165	175
Conflagration (new title; separately compiled by Bureau of the Census since 1903)	166	168	174
Traumatism by cutting or piercing instruments (new title)	171	([7])	166
Traumatism by fall (new title)	172	([7])	166
Traumatism by other crushing (new title)	175	([7])	166
Injuries by animals (new title)	176	([7])	166
Electricity (lightning excepted) (new title)	181	186	176
Homicide by firearms (new title)	182	([6])	176
Homicide by cutting or piercing instruments (new title)	183	([6])	176
Homicide by other means (new title)	184	([6])	176

[1] Transferred from Diseases of nervous system (Class II) to General diseases (Class I), beginning with 1910.
[2] Discontinued as a separate title and included with Tuberculosis of the lungs, beginning with 1910.
[3] Discontinued as a separate title and included with Tuberculosis of other organs, beginning with 1910.
[4] In addition to the changes specified in the table, it should be noted that in the case of the causes classified under titles 135, 136, 139, and 140, numerous changes were made from one title to another in 1910, as the result of which statistics entered under these titles for 1910 and succeeding years are not comparable with those for earlier years.
[5] Changes not effective until 1911.
[6] Formerly included under old title 176 (Other external violence). In effect, the title—not title-heading or name—has been discontinued, since the present title 186, although having the same title-heading, bears little resemblance to the former title; three out of the four subtitles of the old "Other external violence" are now classified under titles other than the present "Other external violence."
[7] Title under which formerly included (see next column) discontinued.

DEATH RATES FROM CERTAIN IMPORTANT CAUSES OF DEATH IN THE REGISTRATION AREA OF THE UNITED STATES FOR EACH OF THE YEARS 1900 TO 1914.

The death rates for certain important causes of death in the registration area of the United States for each year during the period 1900 to 1914 are shown in the following table:

CAUSE OF DEATH.	DEATH RATE PER 100,000 POPULATION.														
	1900	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911	1912	1913	1914
Typhoid fever	35.9	32.3	34.3	34.1	31.7	27.8	31.3	29.5	24.3	21.1	23.5	21.0	16.5	17.9	15.4
Measles	12.5	7.3	9.5	9.8	11.0	7.5	12.1	10.0	9.9	9.6	12.3	10.0	7.0	12.8	6.8
Scarlet fever	10.2	13.1	12.6	12.2	10.8	6.7	7.7	10.0	11.9	11.4	11.6	8.8	6.7	8.7	6.6
Whooping cough	12.1	9.7	12.0	15.8	6.5	10.6	15.1	11.3	10.6	9.6	11.4	11.3	9.3	10.0	10.3
Diphtheria and croup	43.3	34.0	30.8	31.7	28.3	23.6	25.7	23.6	21.5	20.4	21.4	18.9	18.2	18.8	17.9
Tuberculosis (all forms)	201.9	196.9	184.5	188.5	200.7	192.3	180.2	178.5	167.6	160.8	160.3	158.9	149.5	147.6	146.8
Cancer	63.0	64.3	65.1	68.3	70.2	71.4	69.1	70.9	71.5	73.8	76.2	74.3	77.0	78.9	79.4
Cerebral hemorrhage, apoplexy	67.5	68.2	68.3	68.2	71.5	71.6	70.1	73.2	69.4	71.7	73.7	74.7	75.7	74.6	77.7
Organic heart diseases, endocarditis	123.1	123.9	128.8	134.3	145.0	143.8	140.2	151.4	141.1	143.3	150.4	148.5	151.2	147.1	150.8
Pneumonia (all forms)	180.5	161.4	155.7	155.1	171.4	148.8	145.5	156.5	130.9	137.6	147.7	133.7	132.3	132.4	127.0
Diarrhea and enteritis (infants under 2 years)	108.8	90.9	84.0	81.6	90.9	97.0	101.4	96.6	95.2	87.8	100.8	77.4	70.3	75.2	66.0
Nephritis, Bright's disease	89.0	89.3	90.9	97.3	103.1	103.4	97.5	102.4	93.7	95.2	99.0	97.5	103.0	102.9	102.4

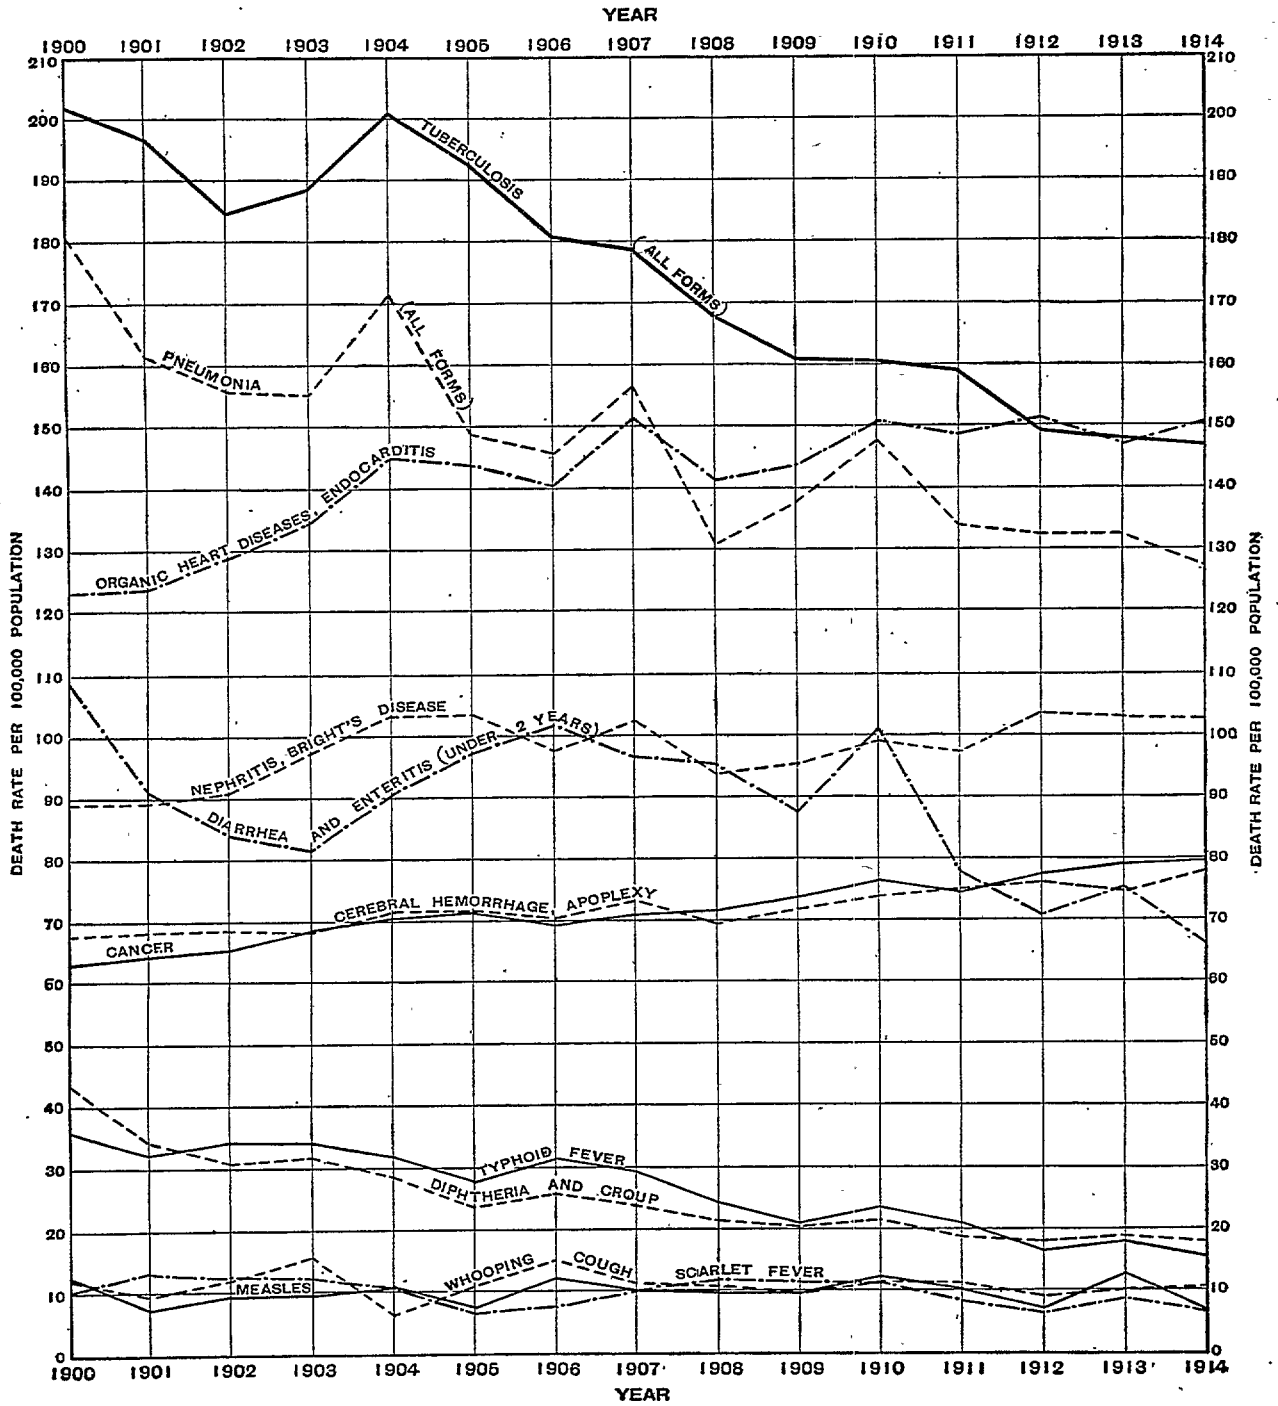
The rates for four of the twelve diseases listed in the above table—whooping cough, cancer, cerebral hemorrhage and apoplexy, and organic heart diseases and endocarditis—show slight increases for 1914 as compared with 1913, while in the cases of the remaining eight the rates for 1914 were lower than for the preceding year. The most pronounced decrease was in the rate for measles, which fell from 12.8 in 1913, to 6.8 in 1914, a drop of 46.9 per cent. Marked decreases were shown also for scarlet fever (from 8.7 to 6.6), and for infantile diarrhea and enteritis (from 75.2 to 66). The five diseases which head the list in this table are epidemic in character and fluctuations in the death rates resulting from them are to be expected.

When the rates for the first few years of the period are compared with those for the last few years, rather pronounced decreases are shown for typhoid fever, scarlet fever, diphtheria and croup, tuberculosis (all forms), pneumonia (all forms), and diarrhea and enteritis (infants under 2 years), while notable increases are in evidence for cancer, cerebral hemor-

rhage and apoplexy, organic heart diseases and endocarditis, and nephritis and Bright's disease. In no case is there an absolutely continuous increase or decrease from year to year throughout the entire period in the rate for a disease named in the above table, but there are several cases in which, with a few unimportant exceptions, continuous increase or decrease is shown.

The following diagram presents graphically the rate per 100,000 population for each of the diseases included in the preceding table for each year during the period 1900 to 1914.

DEATH RATES FROM CERTAIN IMPORTANT CAUSES OF DEATH IN THE REGISTRATION AREA OF THE UNITED STATES FOR EACH OF THE YEARS FROM 1900 TO 1914.



As a general rule, the decreases among the rates for these twelve diseases during the 15-year period have been much more pronounced than the increases; and to this cause may be attributed, in large part, the lowering of the general death rate in the latter part of the period as compared with the earlier.

TYPHOID FEVER.

There were 10,185 deaths from typhoid fever in the registration area in 1914, corresponding to a death rate of 15.4 per 100,000 population. In 1913 the deaths numbered 11,323 and the rate was 17.9. It will be noted that there was a considerable decrease in 1914, which is especially gratifying in view of the fact that the rate for 1913 was higher than that for 1912. The increase in 1913, as compared with 1912, was due partly to the fact that the state of Virginia was added to the registration area in 1913, since the rate for that state, 33.3 per 100,000 population, was nearly double that for the area as a whole. The 1914 rate for Virginia, 27.3, however, showed a marked drop as compared with that of the preceding year. The state of Kansas, which was admitted to the area in 1914, had a rate of 18.9 per 100,000 population, which was considerably in excess of that for the area as a whole. The rather pronounced decrease shown, therefore, was due entirely to the reduction of the rate in the area as constituted in 1913.

The highest rate shown, as in the preceding year, was that for North Carolina, 56.5 per 100,000 population, but this rate pertains only to municipalities which had 1,000 or more inhabitants in 1910. Kentucky had the second highest mortality (41.7), and was followed by Virginia (27.3), Maryland and Missouri (each 23.9), and Indiana (21.2). While the rates for these states are far in excess of that for the area as a whole, it is interesting to note that in each there was a decrease from the rate for the preceding year. Notably low mortality from typhoid fever prevailed in Wisconsin (6.5), Massachusetts (7.6), Rhode Island (8.1), New Jersey (8.2), and New Hampshire (8.7). When the rates for 1914 are compared with those for 1913 very few pronounced increases or decreases are shown. In Maine the rate rose from 12 in 1913 to 16 in 1914, and in Vermont it increased from 7.8 in the earlier year to 11.6 in the later. On the other hand, more or less marked decreases were shown by the following states: California, from 15.9 to 13.4; Connecticut, from 11.3 to 9.2; Indiana, from 25.1 to 21.2; Maryland, from 33.3 to 23.9; Michigan, from 18.4 to 13.3; Montana, from 22.7 to 15.3; New Hampshire, from 11.9 to 8.7; Ohio, from 24 to 18.1; Pennsylvania, from 18.1 to 13; Utah, from 22.2 to 15.9; and Virginia, from 33.3 to 27.3.

A comparison of the rates for the two years with respect to the main subdivisions of the registration area brings out the following interesting changes: In 1913, the highest rate shown was that for the rural part of the registration states (19.6), while in 1914, the rate for this subdivision, 16.9, was exceeded very considerably by that for the registration cities in other states (19.2). This last-named rate exceeds the corresponding one for the year 1913 (18.7), and furnishes the only instance of an increase in the typhoid rate for one of the main subdivisions of the registration area. The mortality in all registration cities (14.1) showed a pronounced decrease as compared with that for the same subdivision in 1913 (16.4), and was considerably lower than that for the rural part of the registration states.

Among the registration cities of 100,000 population or over in 1910, the highest rate for typhoid fever in 1914 was that for Nashville (51.3). Very high mortality also prevailed in Atlanta (46.3), Memphis (42.6), Birmingham (39.7), and Toledo (36.9). The lowest rates among these cities were those for Cambridge (1.8), Bridgeport (3.5), Worcester (3.8), Omaha and Paterson (each 4.5), Cincinnati (6.2), New York (6.3), Oakland and Chicago (each 6.6), and Portland, Oreg. (6.9). More or less pronounced increases are shown for Atlanta (from 21.9 per 100,000 population in 1913 to 46.3 in 1914), New Orleans, Grand Rapids, Memphis, Nashville, Seattle, and Spokane; and considerable decreases appear for Los Angeles, Oakland, Denver, Bridgeport, Chicago, Cambridge (from 9.2 to 1.8), Detroit, Kansas City, Mo., St. Louis, Omaha, Paterson, Albany, Cleveland, Columbus, Dayton, Philadelphia, Pittsburgh, and Richmond. As compared with the earlier years of these annual mortality reports there has been a notable decrease in the number of municipalities in which typhoid fever reached marked epidemic prevalence. Typhoid death rates of 50 and over per 100,000 population were not infrequent in the large cities of the registration area in the earlier part of the period, but in only one of these major cities was the rate for 1914 in excess of 50, namely, Nashville (51.3).

The general decrease which has taken place in the typhoid rate during the period 1900 to 1914, also is brought out strikingly by a comparison of the earlier and later figures for the registration area as a whole. As noted in the comment on typhoid fever in mortality statistics, 1913 (p. 25), this marked decrease shows how great has been the progress made in methods of prevention and treatment of this disease.

MEASLES.

There were 4,461 deaths from measles in the registration area in 1914. The death rate, 6.8 per 100,000 of population, was only a little more than half as great as that for the preceding year (12.8). Although the 1913 rate for this disease was the highest shown for any year since and including 1900—the year to which the first of the series of annual mortality reports related—the rate for 1914 was the lowest. The 1912 rate, 7, was, however, only a little higher than that for 1914.

Comparison of the mortality in the main subdivisions of the area and in the registration states brings out the fact that this decrease was almost universal.

Each main subdivision showed a much lower death rate for 1914 than for the preceding year, and in only two states was there a pronounced increase in the rate for the later as compared with the earlier year (Colorado, with 9.3 as against 4, and Connecticut, with a rate of 12 as compared with 8.5). Small increases appear for California and New Jersey.

Among the registration states the highest mortality from this disease in 1914 was in Missouri, for which the rate was 12.2 per 100,000 population. For Connecticut it was 12; for Kentucky, 11.5; for North Carolina (for which the figures relate only to municipalities having 1,000 or more inhabitants in 1910), 10.8; and for Rhode Island, 9.6. Vermont showed the lowest death rate from measles (1.1), and was followed by Maryland (1.8), Utah (2.9), Minnesota and Washington (each 3.6), and Kansas (4.3).

Among the cities having 100,000 or more inhabitants in 1910, Bridgeport had the highest death rate from measles in 1914 (28.6 per 100,000 of population). Other notably high rates were those for New Haven (21.5), Newark, N. J. (18.2), Oakland (15.3), and Providence (15.1). Very low rates prevailed for Washington, D. C., and Seattle (each 0.3), Richmond (0.7), Baltimore (1), Kansas City, Mo. (1.1), and St. Paul (1.3). There were notable increases in the mortality from this disease in Oakland (from which no deaths were reported in 1913, whereas the rate was 15.3 per 100,000 population in 1914), San Francisco, Bridgeport, New Haven, Atlanta, Newark, N. J., Paterson, Columbus, Portland, Oreg., Scranton, and Spokane. Marked decreases were shown for Los Angeles, Washington, D. C., Chicago, New Orleans, Baltimore, Fall River (from 58.9 to 2.4), Lowell, Detroit, Grand Rapids, Minneapolis, St. Paul, Kansas City, Mo., St. Louis, Jersey City, Buffalo, Syracuse, Cincinnati (from 18.1 to 0, no deaths being reported in 1914), Cleveland, Toledo, Philadelphia, Pittsburgh, Memphis, Nashville, Richmond, and Seattle.

As noted in the section, "Accuracy of Statistics of Causes of Death" (p. 33), measles is one of those diseases from which the number of deaths is always subject to understatement, by reason of the fact that when death is caused by some terminal condition of which measles is the primary cause, the physician sometimes fails to write "measles" on the death certificate.

The effort which the bureau has been making to impress upon physicians the importance of statements of all causes involved in any death has undoubtedly brought about great improvement along these lines, and statistics of measles, like those of all causes subject to understatement on this account, will doubtless improve from year to year until the margin of error becomes practically negligible.

SCARLET FEVER.

The year 1914 showed a much smaller return of deaths from scarlet fever than the preceding year (4,340 as compared with 5,498); and the death rate decreased from 8.7 per 100,000 population in the earlier year to 6.6 in the later, a decline of over 24 per cent. Lower rates than for 1913 prevailed in 1914 in every main subdivision of the registration area and in the majority of the registration states, although there were slight increases in California, Kentucky, Maryland, New Jersey, and Wisconsin, and rather more pronounced increases in Minnesota (from 8.5 to 15), Missouri (from 4.3 to 6.3), New Hampshire (from 3 to 5.7), and Rhode Island (from 3.6 to 7.8). The highest rate that prevailed in any state in the year 1914 was that for Minnesota (15). Other rates well above the average for the registration area were those for Colorado and Pennsylvania (each 10.4), Wisconsin (8.8), New Jersey (8.6), and Rhode Island (7.8). Notably low rates were shown for North Carolina, in which the figures relate only to municipalities having 1,000 or more inhabitants in 1910 (0.6); Kansas, Virginia, and Washington (each 1.8); Maine (2.2); Kentucky (2.6); and Vermont (3.3).

The cities of 100,000 population or over in 1910 in which a high mortality prevailed for this disease in 1914 were Pittsburgh (33.3), Minneapolis (26.2), Milwaukee (22.6), St. Paul (19.4), and St. Louis (19.1). Extremely low rates appear for Washington, D. C. (0.3); New Orleans (0.6), Paterson (0.7), Seattle (1), and Los Angeles, San Francisco, Atlanta, and Toledo (each 1.1); in several other cities the mortality was considerably below the rate for all registration cities taken as a group (8). The death rate for the registration area (6.6) is the minimum since and including 1900, to which year the first of the bureau's annual mortality reports related, although this figure was closely approached in 1905 and 1912 (each 6.7). The colored population, although not immune from scarlet fever, is far less susceptible to it than the white population; and in the registration states and cities in which there are large proportions of colored inhabitants the death rates for scarlet fever are without exception lower than the rates for all registration states and all registration cities taken as groups.

WHOOPING COUGH.

There were 6,816 deaths from whooping cough in the registration area in 1914, corresponding to a death rate of 10.3 per 100,000 population; in 1913 there were 6,332 deaths and the rate was 10. The rate for 1914 represents a very slight increase over that for the preceding year, and examination shows that the only main subdivision of the registration

area in which the 1914 rate was markedly in excess of the rate for 1913 was that comprising the registration cities in nonregistration states. In this subdivision the rate for 1914 was 10.8 per 100,000 population, as compared with 6.4 for the preceding year.

Among the registration states the highest mortality prevailed in Virginia (31.6), whose rate was almost double that of North Carolina (16.5), which was the second highest. The rate in Kentucky was 14.8; in Maryland, 14.5; and in Rhode Island, 13.9. It will be noted that in four of these five states there is, compared with the remainder of the registration area, a large colored population, and that in each of these states the rate for the colored was very much in excess of that for the whites. As will be shown by an examination of the death rates of cities in which the colored population is considerable, whooping cough is a disease whose mortality is materially higher among the colored race than it is among the white.

Among the registration states those in which the rate was notably low for this disease were Washington (4), Montana (4.2), Wisconsin (5.8), New York (7.1), and Ohio (7.5).

Among the cities of 100,000 population or over in 1900 the highest rate shown for whooping cough in 1914 was that for Richmond (51.1). The second highest rate, that for Birmingham, was 25.9; and the next in order were Nashville, with 20.9; Bridgeport, with 18.2; and Atlanta with 17.8. Among the cities in which the death rate for whooping cough was markedly low were Portland, Oreg. (1.2); Rochester (2.4); Los Angeles (2.5); Seattle (3.2); and Milwaukee (3.3).

Among the cities in which there was a pronounced increase in the 1914 rate as compared with that for 1913 were the following: Birmingham, from 15.2 to 25.9; Oakland, from 1.1 to 15.3; San Francisco, from 3.6 to 12.3; Bridgeport, from 7.1 to 18.2; Chicago, from 4 to 9.3; Baltimore, from 6.8 to 14.3; Fall River, from 11.3 to 17.5; Lowell, from 4.6 to 8.1; Worcester, from 5.8 to 8.2; Grand Rapids, from 0.8 to 4.9; Minneapolis, from 4.5 to 12.8; St. Louis, from 3.7 to 12; Omaha, from 2.3 to 7.5; Buffalo, from 6 to 16.5; Syracuse, from 4.8 to 12.7; Dayton, from 2.5 to 12.1; Philadelphia, from 6.4 to 14.8; Scranton, from 7.9 to 14.9; Nashville, from 8.8 to 20.9; and Richmond, from 11.3 to 51.1.

DIPHTHERIA AND CROUP.

The expression "diphtheria and croup" is used as the title heading in the International List. There are, however, comparatively few deaths now returned from "croup," which term is deservedly falling into very general disuse. Diphtheria is, of course, primarily a children's disease and the age constitution of populations must, therefore, be considered in connection with the study of these crude rates.

The number of deaths from diphtheria and croup in 1914 was 11,786, corresponding to a death rate of 17.9 per 100,000 population. This represented a slight decrease as compared with 1913, in which year there were 11,920 deaths, with a rate of 18.8. Since 1900, the year to which the first of the annual mortality reports of the Bureau of the Census related, there has been a steady decrease in the death rate for diphtheria, and the rate for 1914 was the lowest for any year during the period 1900-1914. This is particularly gratifying in view of the fact that this malady is now regarded as a preventable and curable one.

The decrease in the rate for diphtheria, although slight, was fairly general, each main subdivision of the registration area showing a lower rate for 1914 than for the preceding year. The rate for the rural part of the registration states was 13.8, as compared with 21.5, the rate for all registration cities.

Among the registration states the highest rate for the year 1914 was that for Pennsylvania (23.3). This state also showed the highest rate in 1913 (25.9), but it will be noted that the 1914 rate represents a considerable decrease from this figure. For Kentucky, the mortality was 21.9 per 100,000 population, as compared with 24.6 in 1913. New Jersey, with a rate of 21.8, showed a slight increase over the preceding year (21.3); and the rate of New York (20.6), the next highest, also represented an increase over the 1913 rate (19.5). For Missouri, the rate was 20.5, a rather pronounced increase over that for the prior year (17.5). Among the markedly low death rates for diphtheria were those for the following states: Washington, 3.3; Colorado, 7.1; Montana, 8.3; Kansas and Utah, each 9.4; and California, 9.5.

Among the cities of 100,000 population or over in 1910, the highest mortality caused by this disease in 1914 was that in Omaha (42.8). Among the other cities with abnormally high rates were the following: Minneapolis, 42.2; Bridgeport, 38.2; St. Louis, 34.7; and Milwaukee, 33.4.

The lowest rates shown were those for the following cities: Seattle, 2.2; Richmond, 3; Spokane, 3.7; Denver, 4.1; and Los Angeles, 6.8.

It is very significant that, although in the earlier years of the period 1900 to 1914, 40 per 100,000 population was the rate quoted in these reports as indicating an unusually high mortality from this disease, and often a considerable number of the large cities had death rates in excess of this figure, there were in 1914, but two, and in 1913, only three, large cities with rates in excess of 40 per 100,000 population.

INFLUENZA.

There was a pronounced decrease in the number of deaths from influenza in 1914 (6,014) as compared with 1913 (7,725), the reduction in the death rate, from 12.2 to 9.1 per 100,000 population, being more

than 25 per cent. The decrease in the rate prevailed in the main subdivisions of the registration area with but one exception, the registration cities in non-registration states, in which there was a very slight increase.

Among the registration states the highest rate for 1914 was that for Vermont (19.7). This state also showed the highest rate for 1913 (35.3), but the decrease was very great, amounting to more than 44 per cent. Other notably high rates were those for North Carolina, for which the figures relate only to municipalities having 1,000 or more inhabitants in 1910 (18.6), New Hampshire (17.1), Kentucky (14.7), and Connecticut (13.9). Especially low rates were in evidence for Washington (3.8), Minnesota (4.8), California (5), Montana (5.1), and Colorado (5.3).

Among the registration cities of 100,000 population or over in 1910, the highest rates were those for New Orleans (31.6), Nashville (21.8), Louisville (20), Richmond (18.5), and Memphis (18.2). The lowest mortality among these cities was that for Seattle (1.6), and very low rates also prevailed for Buffalo (2.4), San Francisco and Worcester (each 2.5), Lowell (2.7), Denver and Spokane (each 2.9), and a number of other cities.

OTHER EPIDEMIC DISEASES.

The causes of death covered by titles 1 to 19, under the class of "General diseases," in the detailed International List of Causes of Death are those which are known as epidemic diseases. While some of these cause many thousands of deaths each year, certain others—typhus fever, relapsing fever, miliary fever, Asiatic cholera, plague, yellow fever, and leprosy—are of extremely rare occurrence in the United States. With two exceptions, however—Asiatic cholera and yellow fever—each of these rare diseases was reported as the cause of at least two deaths in the registration area in 1914. Because of the extreme rarity of these diseases it is the practice of the bureau to make every possible effort to authenticate the returns before tabulating deaths under the titles by which they are designated. This is particularly advisable on account of the fact that one or two of the terms are rather loosely used and when inquiry is made it is sometimes found that the disease to which the physician alluded was one entirely different from that covered by the title heading in the International List. A very good example of this is "relapsing fever." This is the heading for title 3 of the International List, and relates to a fever caused by the *spirillum obermeieri*, and which is extremely rare in this country. The bureau has determined, however, on inquiry, that this is not always the sense in which the term is used on death certificates. With respect to the deaths charged to these rare diseases, therefore, it can be said that each case has been made the subject of special inquiry and that either the existence of the disease has been verified by the attending physician, hospital, or registration office or no reply has been received to the bureau's letter. In the latter case the Bureau of the Census feels that it has taken every possible precaution and has no choice left but to classify the death as reported.

Three deaths were charged to typhus fever in 1914: 1 in Peabody, Mass., 1 in the Borough of Brooklyn, and 1 in Providence. Relapsing fever caused 4 deaths: 1 in Union County, N. J., 2 in Portsmouth, Va., and 1 in Norfolk County, Va. To miliary fever, 2 deaths were assigned: 1 in North Adams, Mass., and 1 in Columbus, Ohio. Bubonic plague caused 10 deaths, all of which occurred in New Orleans. Twelve deaths were reported from leprosy, 3 of which occurred in California (1 in Alameda County, 1 in Los Angeles, and 1 in San Francisco); 2 in Key West, Fla.; 1 in Dukes County, Mass.; 1 each in Bronx and Queens Boroughs, New York City; 1 in Pittsburgh; 2 in Charleston, S. C.; and 1 in Galveston, Tex.

The caption of title 19 of the International List of Causes of Death is "Other epidemic diseases." Under this heading are included a considerable number of diseases some of which are almost never fatal, while others are very grave indeed. In 1914, the deaths charged to these diseases numbered 293, distributed as follows: Chicken pox, 129; mumps, 119; German measles, 23; roseola, 2; filariasis, 1; dengue fever, 1 (in Butte, Mont.); foot and mouth disease 2 (1 in Buffalo and 1 in Providence); glandular fever, 3; and Rocky Mountain spotted fever, 13 (7 of which were in Montana—3 in Missoula and 4 in Ravalli County; 5 in Utah—2 in Box Elder County, 1 in Cache County, and 2 in Salt Lake City; and 1 in Washington—Pend Oreille County).

PELLAGRA.

Pellagra caused 1,550 deaths in the registration area during the year 1914. This represents a very pronounced increase over the number reported for the preceding year (1,015). The death rate increased from 1.6 per 100,000 population in 1913 to 2.3 in 1914, or by nearly 44 per cent. There were no additions to the registration area in 1914, which accounted for any considerable part of this increase in the number of deaths. In the state of Kansas, which was added for that year, there were 18 deaths from pellagra, 11 of which occurred in cities that were included in the registration area of 1913; and in the three Tennessee cities of Chattanooga, Knoxville, and Jackson, added in 1914, there were 21, 16, and 9 deaths, respectively, from this disease. Thus only 53 of the 535 deaths representing the increase from 1913 to 1914 occurred in territory added to the registration area for the latter year, leaving 482 as the actual increase in the registration area as constituted in 1913.

While this disease is more prevalent without the registration area than within it, the figures for the area are of great significance, since they show a rapid and nearly continuous increase in the death rate during the past few years. In 1910, there were 368 deaths from pellagra, corresponding to a rate of 0.7; in 1911 there were 659 deaths, with a rate of 1.1; in 1912, 674 deaths occurred, the rate remaining at 1.1; in 1913, 1,015 deaths were charged to pellagra and the rate rose to 1.6, an increase of over 45 per cent as compared with the preceding year; and in 1914 the number of deaths reached 1,550, and the rate advanced to 2.3. It is apparent, therefore, that the ravages of this disease are increasing at such a rate as to give grounds for some little apprehension.

Deaths from pellagra were distributed throughout the registration area in 1914 as follows:

In the registration states: California, 28; Colorado, 9; Connecticut, 6; District of Columbia, 14; Indiana, 2; Kansas, 18; Kentucky, 149; Maine, 9; Maryland, 7; Massachusetts, 19; Michigan, 4; Minnesota, 5; Missouri, 24; Montana, 1; New Hampshire, 10; New Jersey, 5; New York, 14; North Carolina (municipalities of 1,000 population or over in 1910), 248; Ohio, 1; Pennsylvania, 6; Rhode Island, 14; Vermont, 2; Virginia, 250; and Wisconsin, 2. Utah and Washington, it will be seen, were the only registration states in which there was no mortality from this disease.

In the registration cities in nonregistration states: Birmingham, Ala., 44; Mobile, Ala., 23; Montgomery, Ala., 38; Jacksonville, Fla., 15; Pensacola, Fla., 9; Atlanta, Ga., 110; Augusta, Ga., 46; Savannah, Ga., 54; Chicago, Ill., 7; Jacksonville, Ill., 1; New Orleans, La., 67; Portland, Oreg., 1; Charleston, S. C., 85; Chattanooga, Tenn., 21; Jackson, Tenn., 9; Knoxville, Tenn., 16; Memphis, Tenn., 107; Nashville, Tenn., 21; El Paso, Tex., 3; Galveston, Tex., 9; and San Antonio, Tex., 17.

TUBERCULOSIS (ALL FORMS).

For the year 1914 there were assigned, under the eight titles of the International List of Causes of Death covering tuberculosis of different parts of the body, 96,903 deaths, representing 10.8 per cent of the mortality charged to all causes in that year. This corresponds to a death rate of 146.8 per 100,000 population, the lowest rate shown for tuberculosis (all forms) since 1900, the year to which the first of the bureau's annual reports related. As compared with 1913, there was a slight decrease, the rate for that year being 147.6 per 100,000 population. The decrease in the death rate for all tuberculous diseases has been continuous since 1904, when it was 200.7. This was the highest rate shown for any year since 1900, in which year the mortality resulting from this cause was 201.9 per 100,000. Tuberculosis was not the first in importance among the causes of death in 1914, its rate being exceeded by that for organic heart diseases, including endocarditis, which increased to 150.8. This is the second time since 1900—the first being the year 1912—that the total number of deaths from these organic cardiac diseases has exceeded the number charged to tuberculosis.

In presenting rates for tuberculous diseases the Bureau of the Census desires to emphasize the fact that crude rates are to be used with extreme caution. In discussions of this subject in reports for prior years attention has been directed to the fact that there are many localities to which consumptives are attracted because of climatic conditions favorable to the treatment of tuberculosis. For this reason states and cities which show exceptionally high death rates are not always those in which conditions are most favorable to the development of tuberculous diseases, but in some instances are those to which patients resort in search of cure. Another fact which must be kept in mind is that the death rate for tuberculosis among the colored population is much higher than among the white. Naturally, therefore, in comparing rates of different localities the constitution of their populations in respect to color must be considered.

Each main subdivision of the registration area showed a decrease in the death rate for all tuberculous diseases in 1914 as compared with 1913, with the exception of the registration cities in nonregistration states. In these cities, taken as a group, there was an increase, their rate having risen from 181.9 in 1913, to 192.5 in 1914. The crude rates for the following states show, in their order, the higher mortalities that prevailed from all forms of tuberculosis in the states of the registration area: North Carolina, the figures for which relate only to municipalities having 1,000 or more inhabitants in 1910, 245.8; Kentucky, 207.8; Maryland, 202; California, 195; and Virginia, 182. Especially low rates were shown for Utah, 50.4; Kansas, 56.7; Washington, 88.5; Michigan, 93.4; and Wisconsin, 100.2.

Among the cities of 100,000 population or over in 1910 the highest rate for tuberculosis (all forms) was that for Memphis, 299.5. Other notably high rates appear for New Orleans, 293.7; Albany, 277.8; Denver, 261.5; and Cincinnati, 243.9. The lowest rate among the large registration cities was that for Spokane, 71.5; and other low rates are shown for Grand Rapids, 78.7; Portland, Oreg., 86.7; Seattle, 88.8; and Scranton, 96.2.

TUBERCULOSIS OF THE LUNGS.

Tuberculosis of the lungs, including acute miliary tuberculosis, caused 84,366 deaths in the registration area during the year 1914. This represents 87.1 per cent of the deaths due to all forms of tuber-

culosis and 9.4 per cent of the total number from all causes. The death rate per 100,000 population was 127.8, a very slight increase over the rate for 1913 (127.7). It will be noted, therefore, that while the rate for all tuberculous diseases combined showed a slight decrease in 1914 as compared with 1913, a small increase was in evidence for tuberculosis of the lungs. Each of these changes is so small, however, as to be without significance. Naturally, as deaths from pulmonary tuberculosis constitute so large a percentage of the deaths due to all forms of tubercular disease, conditions which prevailed in the various main subdivisions, states, and cities of the registration area in respect to all tuberculous affections are very apt to be practically identical with those shown in respect to tuberculosis of the lungs; that is to say, when an increase or decrease in the rate for pulmonary tuberculosis is shown, that for all forms of tuberculosis combined is almost certain to be correspondingly affected. Thus, of the five states in which the death rate for tuberculosis (all forms) was the heaviest in 1914, four showed, also, relatively high rates for tuberculosis of the lungs. For each the highest rate was shown by the North Carolina municipalities which had 1,000 or more inhabitants in 1910, and the next in order were Kentucky, Maryland, and California; but the rate for pulmonary tuberculosis in Virginia, which was the fifth state in respect to the rate for all forms of tuberculosis combined, was exceeded by that for Colorado. A similar comparison may be made of the states with low mortalities. The lowest rate per 100,000 population for tuberculosis of the lungs in 1914 was shown by Utah (40.8), which also had the lowest mortality for all forms of tuberculosis combined; and Kansas ranked second, Washington, third, and Michigan fourth in respect to each; but the rate for all forms of tuberculosis combined in Vermont, which had the fifth lowest rate for pulmonary tuberculosis, slightly exceeded the corresponding rate for Wisconsin.

Of the cities of 100,000 population or over in 1910, the following were the five which had the highest death rates from pulmonary tuberculosis in 1914: Memphis (273), New Orleans (270.5), Albany (245.7), Denver (241.5), and Cincinnati (219.8). It will be observed that these five cities rank in exactly the same order in respect to mortality from all forms of tuberculosis combined.

Among the large cities with notably low death rates for pulmonary tuberculosis were Spokane (53.8), Portland, Oreg. (61.4), Seattle (66.8), Grand Rapids (68.2), and Scranton (76.4). This is very nearly, although not precisely, the same order maintained as to prevalence of tuberculosis of all forms. There were no particularly noticeable increases or decreases in the death rate for tuberculosis of the lungs in any of the states of the registration area in 1914 as compared with the preceding year, the most pronounced of these changes being the increases from 203.8 in 1913 to 221.7 in 1914 for the North Carolina municipalities of 1,000 or more population in 1910, and from 149.6 in 1913 to 161.8 in 1914 for Virginia.

In the cities of 100,000 or more population, however, there were a number in which noticeable changes were in evidence. Rather marked increases were shown for the following: San Francisco, from 162.8 in 1913 to 180.2 in 1914; Bridgeport, from 83.8 to 98; Louisville, from 160.8 to 185; New Orleans, from 234.3 to 270.5; Fall River, from 128.2 to 146.7; Worcester, from 104.6 to 119.2; Grand Rapids (which is one of the five large cities in which the mortality is lowest), from 54.7 to 68.2; Omaha, from 90 to 101.3; Memphis, from 243 to 273; Nashville, from 174 to 201.9; and Richmond, from 169.7 to 188.3. Among those cities in which noticeable decreases took place in the mortality from pulmonary tuberculosis, the following may be mentioned: Los Angeles, from 233.5 to 201; Washington, D. C., from 206.9 to 181.7; Atlanta, from 135.9 to 116; Paterson, from 133.1 to 113.9; Dayton, from 147.4 to 121.2; and Spokane, from 67.8 in 1913 to 53.8 in 1914. The same precaution which was enjoined in the comment on tuberculosis (all forms) should be exercised in comparing rates of states and cities for pulmonary tuberculosis. The death rate of the Negro race from this cause is markedly high, and the race composition of given populations should be studied in this connection, especially with reference to tuberculosis rates for Southern states.

CANCER.

Cancer and other malignant growths caused 52,420 deaths in the registration area in 1914. The death rate was 79.4, a very slight increase over that for the preceding year (78.9). The increase in the death rate from cancer and other malignant tumors has been continuous, except for slight declines in 1906 and 1911, since the year 1900. For Kansas, the only state added to the area for 1914, the rate was only 61.3, which was well below that for the area as a whole. This very slight increase prevailed in each of the main subdivisions of the registration area.

In the registration states the highest mortality was that for Vermont (109.9), and this state also had the maximum rate in 1913. In Maine the mortality was 107.6; in Massachusetts, 101.2; in New Hampshire, 100.8; and in California, 97.9. The same five states showed the highest rates in 1913, although not in the same order. The lowest rate among the registration states was that for Utah (45.8), which was followed very closely by Kentucky, with 46; Virginia, with 48.9; Montana, with 51.5; and North Carolina, with 57.8. In the last-named state the figures relate only to municipalities having 1,000 or more inhabitants in 1910.

Among the cities of 100,000 population or over in 1910, the highest death rates for cancer in 1914 were shown, in order, for the following five: Albany (146.7), San Francisco (128.4), Boston (118.7), New Haven (113.5), and Worcester (111.6). The lowest rates were those for Birmingham (46.3), Fall River (55.8), Atlanta (59.1), Scranton (60.1), and Milwaukee (69.4). The bureau wishes to repeat in this report the warning which it has made a part of its text comment on cancer in each preceding report, with reference to the danger in comparing the crude death rates for this disease in different localities without considering the age and color distribution of the population, as well as the fact that a relatively high mortality for a given city may be caused largely by deaths of nonresidents who come to the city for hospital treatment. Furthermore, since colored persons are less susceptible to cancer than are white persons, the states and cities in which the colored population is relatively large do not, as a rule, have as high rates for cancer and other malignant tumors as those places in which the colored population is small or negligible.

Among the 52,420 deaths caused by cancer and other malignant growths, 19,889, or 37.9 per cent, were assigned to the title heading of the International List, "Cancer of the stomach and liver," and 8,152, or 15.6 per cent, to the heading, "Cancer and other malignant tumors of the female genital organs." It will thus be seen that well over half of all deaths classified as due to malignant growths in the registration area resulted from cancers of the organs named.

Thirty-one thousand one hundred and thirty-eight (31,138) of the deaths charged to malignant growths were those of females, as compared with 21,282 deaths of males. Under four of the seven headings relating to cancer, in the International List, deaths of males predominate; but those of females are so largely in excess among deaths which are assignable to the headings, "Cancer and other malignant tumors of the peritoneum, intestines, and rectum" and "Cancer and other malignant tumors of the breast," that taken with the 8,152 assigned to "Cancer and other malignant tumors of the female genital organs," they bring the total for females far in excess of that for males. This is a condition which prevails year after year.

As announced in the text comment on cancer in Mortality Statistics, 1913, the Bureau of the Census has been preparing special statistics of cancer in the registration area covering the year 1914, which will be published in monograph form. In these special statistics the seven titles of the detailed International List have been subdivided in order to show the seat of the malignant growth with greater precision than does the International List. In connection with this special study the bureau, at the request of the American Society for the Control of Cancer and others especially interested in this work, undertook to ascertain from the attending physician the basis of diagnosis in each case where the growth was invisible and not accessible to direct observation. This entailed a very extensive correspondence with physicians throughout the registration area. The data gathered in this way will appear in the monograph to which reference has been made above, but so much interest has been manifested in the bureau's decision to give the number of deaths in greater detail with respect to the location of malignant growths that it has been decided, in order that students of the subject may have this information for reference in the present report as well as in the monograph devoted solely to the subject of cancer, to publish the following table in this volume:

SEAT OF DISEASE.	Number of deaths in the registration area: 1914.	SEAT OF DISEASE.	Number of deaths in the registration area: 1914.
Cancer and other malignant tumors (aggregate)	52,420	Of the female genital organs (total)	8,152
Of buccal cavity (total)	2,270	Ovary and fallopian tube	451
Lip	376	Uterus	7,470
Tongue	614	Vagina and vulva	184
Mouth	230	Others of this class	47
Jaw	851		
Others of this class	199	Of the breast	5,423
		Of the skin	1,957
Of the stomach, liver (total)	19,889		
		Of other organs or of organs not specified (total)	7,984
Pharynx	58		
Esophagus	605	Larynx	341
Stomach	12,768	Lung and pleura	371
Liver and gall bladder	6,458	Pancreas	686
		Kidneys and suprarenals	538
Of the peritoneum, intestines, rectum (total)	6,745	Prostate	784
		Bladder	1,014
Peritoneum and mesentery	485	Brain	141
Intestines	4,055	Bones (except jaw)	497
Rectum	2,171	Testes	121
Others of this class	34	Others of this class	3,491

ORGANIC DISEASES OF THE HEART.

Ninety-three thousand five hundred and eighty-eight (93,588) deaths, corresponding to a rate of 141.8 per 100,000 population, were assigned to organic diseases of the heart in 1914. This was the largest number classified under any one of the titles of the International List of Causes of Death for that year. The number of deaths resulting from organic diseases of the heart exceeded the number charged to tuberculosis

of the lungs by more than 9,000, the number assigned to pneumonia (all forms) by nearly 10,000, and the number due to Bright's disease and nephritis by more than 26,000. The death rates fluctuated more or less during the period 1900–1914, but if those for the last few years are compared with the rates for the first quinquennium of the period it will be seen that a considerable increase has taken place.

In comparing the rates for 1910 and subsequent years, however, it must be borne in mind that part of the increase shown is only apparent, owing to the fact that deaths due to "Endocarditis (unqualified)" and "Myocarditis (unqualified)" were formerly compiled under title 78 (Acute endocarditis), regardless of age of decedent. In the revision of the classification, however, it was decided by the International Commission to assign deaths of persons 60 years of age and over, when reported from these diseases without qualification, to organic diseases of the heart, and this change is responsible for a part of the increase shown.

It must also be borne in mind that the great majority of deaths assignable to organic diseases of the heart are those of persons who have passed middle life. Crude death rates, therefore, for this disease should be used with caution and with due regard to the age distribution of the populations involved.

Among the registration states the highest death rate for organic diseases of the heart in 1914 was that for New Hampshire (208.1). Other notably high rates were those for Vermont (194.6), Massachusetts (185.3), Maine (181.7), and New York (175.6). The lowest rates were those for Colorado and Washington (each 79.4), Kentucky (85.5), Montana (89.5), Missouri and Utah (each 95.1), and Kansas (96.7).

Albany, with a death rate of 227.3 per 100,000 population in 1914, had the highest mortality from organic diseases of the heart shown by any city having 100,000 or more inhabitants in 1910. Other notably high rates were those for San Francisco (221.2), Boston (218.7), Worcester (218.1), and New Orleans (215.4). Those cities in which the rates were notably low were Spokane (73), Seattle (88.8), Milwaukee (92.5), Bridgeport (95.4), and Cleveland (101.8).

PNEUMONIA (ALL FORMS).

Pneumonia (all forms) caused 83,804 deaths in the registration area in 1914, the death rate being 127 per 100,000 population. In 1913 the number of deaths assigned to this cause was 83,778, and the rate was 132.4. Under the heading "Pneumonia (all forms)" were compiled, for 1914, 51,651 deaths classified under Title No. 92 of the International List of Causes of Death, the caption of which is simply "Pneumonia," together with 32,153 deaths which were assigned to International Title No. 91 (Bronchopneumonia). Among those assigned to "Pneumonia," 36,911 were definitely described as of the lobar or croupous form, while 14,740 were reported as having been caused by "Pneumonia," with no qualifying expression. As has been commented on before in the text of these reports, many of the deaths reported as due to "Pneumonia" and to "Bronchopneumonia" undoubtedly represented cases in which these were terminal conditions occurring in the final stages either of chronic diseases or of acute infectious or contagious conditions.

In analyzing the death rates for Pneumonia covering the period 1900 to 1914, one is impressed by the immense decrease in the rates for the later as compared with the earlier years. The rate for 1914 was the lowest for any year of the period.

It is probable, however, that much of this decrease is more apparent than real. There can be no doubt that in the earlier years of the period the practice of writing merely "Pneumonia" or "Bronchopneumonia" and of omitting the name of the disease that was the primary cause was far more prevalent than it is to-day; and it is to be expected that year by year physicians will come to realize more fully the importance of making complete statements of all known morbid conditions which had a part in any given case, and that there will result an increasing proportion of accurate statements of the primary conditions with which "Pneumonia" so frequently sets in as a complication.

During the year 1914 the Bureau of the Census received 1,743 replies to letters written to physicians who had certified "Pneumonia" as the sole cause of death on certificates, and, as the result of having in its possession the additional information thus gained, changed the classification in 658, or 37.8 per cent, of these cases, so that the deaths were compiled under titles other than Pneumonia. The majority of the changes (511), however, were to Bronchopneumonia, leaving only 147 which were assigned to titles other than those covered by Pneumonia (all forms). The bureau also received 1,035 replies to inquiries in cases where "Bronchopneumonia" was the sole cause certified, and was thereby enabled to assign 225, or 21.7 per cent, to other diseases. The results of this correspondence are discussed in more detail under the heading of "Accuracy of Statistics of Causes of Death" (p. 33).

The decrease in the death rate for Pneumonia (all forms) was general throughout the principal subdivisions of the registration area. True lobar or croupous pneumonia is a specific infectious disease, and in comparing the rates for states and cities for any given year with those for other years many fluctuations, due chiefly to climatic conditions, are to be expected.

Among the registration states Maryland had the highest death rate in 1914, 158.2 per 100,000 population. In Massachusetts and New York the rate was 155.6; in Connecticut, 154.3; in New Jersey, 153.7; and in North Carolina (municipalities of 1,000 population or over in 1910), 150.1. The five states for which the lowest rates prevailed were Washington (50.6), Kansas (67.1), Michigan (92.4), California (93.5), and Wisconsin (95.5).

Among the cities of 100,000 population or over in 1910 the highest rate in 1914 was that for Pittsburgh (240.4). This, however, represented a material decrease from the corresponding rate for 1913 (283.8). The next highest rates were those for Scranton (234.9), Fall River (233.6), Baltimore (212.4), and New Haven (193.1). The five cities for which the lowest rates appear are Seattle (54), Portland, Oreg. (60.2), Spokane (61.2), Grand Rapids (75.5), and Los Angeles (75.9).

The death rate for pneumonia is very much higher for colored persons than for white persons. As to the age incidence, its ravages are largely in the extremes of life.

DIARRHEA AND ENTERITIS (UNDER 2 YEARS).

Forty-three thousand five hundred and thirty-two (43,532) children under 2 years of age in 1914 died of the diarrheal diseases which are included under title heading No. 104 of the International List of Causes of Death, "Diarrhea and enteritis (under 2 years)." The death rate was 66 per 100,000 based on the population at all ages. In 1913 there were 47,605 deaths, corresponding to a rate of 75.2. The mortality in the registration area for these diseases was lower for 1914 than for any preceding year during the period 1900 to 1914. These are causes for which the death rates of the later years of this period show a very marked decrease from those of the earlier years. On account of their great importance as factors in the mortality of children under 2 years of age, this decrease is of very special interest, for under this heading are classified all deaths reported as having been caused by cholera infantum, colitis, diarrhea, enteritis, enterocolitis, gastroenteric catarrh, gastroenteritis, gastrointestinal catarrh, ileocolitis, intestinal indigestion, "Summer complaint," and many others. The decrease shown for the registration area as a whole was in evidence for each of its principal subdivisions, and, with three exceptions—Connecticut, North Carolina (municipalities of 1,000 population or over in 1910), and Vermont—the 1914 death rate was lower than that for the preceding year in every state in the registration area.

The North Carolina municipalities had a rate of 134 per 100,000 population, which was much the highest among the registration states. The next highest rates were those for Pennsylvania (95.4), Maryland (92.7), Connecticut (87.1), and New Jersey (85.6). Notably low death rates appear for Washington (15.7), California (30.6), Utah (30.9), Kansas (31.4), and Minnesota (33.9). In comparing these crude rates, as well as those quoted below for the large cities of the registration area, the age distribution of the populations should be given due consideration.

Among the cities of 100,000 population or over in 1910 by far the highest rate in 1914 was that for Fall River (295.8). Scranton followed with a mortality of 162.7 per 100,000, and next in order were Chicago (131.1), Detroit (122.2), and Buffalo (117.6). The notably low rates among these cities were those for Portland, Oreg. (9.2), Seattle (11.2), Oakland (19.1), Spokane (20.6), and San Francisco (22.5). Diarrhea and enteritis are, of course, much more prevalent in urban than in rural localities. The rate for the cities in registration states in 1914 was 75.3, as compared with 50.2 for the rural part of the registration states, thus denoting a mortality 50 per cent higher in the urban than in the rural sections of these states. The mortality in the registration cities in nonregistration states was considerably higher (107.6) than that in cities in registration states, bringing the average rate for all registration cities up to 79.8.

The rates for diarrhea and enteritis among the colored population are, as a rule, higher than those for white persons, which fact should also be considered in comparing the crude rates for cities and states.

BRIGHT'S DISEASE AND NEPHRITIS.

Bright's disease and nephritis, including both the acute and chronic forms, caused 67,545 deaths in 1914, corresponding to a death rate of 102.4 per 100,000 population. This was a slight decrease from the rate for the preceding year (102.9). Of the deaths enumerated under this heading, 5,912 were reported from acute nephritis. Comparison of the rates for these diseases for the period 1900–1914 shows that those for the first four years were considerably lower than those for the two years that immediately followed (1904 and 1905), the rate for the last-named year (103.4) being the highest for the period; that in 1906 there was a rather pronounced drop, followed by another increase in 1907; that during the next four years the mortality was lower than in 1907; and that in 1912 it rose to 103 per 100,000 population, from which it showed a slight decrease to 102.9 in 1913 and a further decrease to 102.4 in 1914. It will be seen, therefore, that the mortality for this disease has not shown a continuous increase, although the rates for the last three years are higher than those for the first few years of the period 1900–1914.

Among the registration states the maximum rate for 1914 was that for Maryland (141.4), and other notably high rates were those for New York (131.6), New Jersey (126.2), Rhode Island (124.8), and the North Carolina municipalities of 1,000 population or over in 1910 (121.1). In the following six states there were correspondingly low rates: Washington (54.3), Montana (57.6), Wisconsin (62.5), Kansas and Utah (each 65.4), and Minnesota (74.3).

As in former years, it will be noted that the rates for all registration cities (119.8) and for cities in registration states (117.7) were considerably in excess of that for the rural part of the registration states (82.5). Among the cities of 100,000 population or over in 1910 the highest rate in 1914 was that for New Orleans (267.4 per 100,000 population), and next in

order were those for Albany (178.7), Memphis (178), Philadelphia (174.4), and Atlanta (172.9). The lowest rates among these large cities were: Seattle, 62; Portland, Oreg., 66.4; Milwaukee, 69.8; Detroit, 72.2; and Spokane, 77.4.

In making comparison of crude rates for Bright's disease and nephritis consideration should be given to the fact that the great majority of the deaths from this cause are of persons in middle life and old age.

SUICIDE.

The number of deaths assigned to Suicide in the registration area in 1914 was 10,933, corresponding to a death rate of 16.6 per 100,000 population. In 1913 there were 9,988 suicides and the rate was 15.8. The International List of Causes of Death devotes nine title headings to the different methods or means employed by suicides. In 1914, as in other years, in well over half of the deaths charged to this heading the means used were poison and firearms. In order that a death may be charged to suicide it must be shown definitely to be due to that cause. For this reason there are many cases each year in which, while death was, in fact, chargeable to suicide, lack of precision of statement necessitated classifying it under a less definite title. There is no question, however, that with each year our statistics of suicide are becoming more nearly complete and accurate. The increase in the rate shown for the later years of the period covered by these annual reports (1900–1914) is attributable, therefore, not entirely to an increase in the number of suicides, but in part to increased precision of statement.

Among the registration states the highest rate was that for California (33.4 per 100,000 population). Next in order were Montana, with 28.9; Washington, 21.5; Connecticut, 21; and Missouri, 20.8. The lowest rates were those for North Carolina (municipalities of 1,000 population or over in 1910), 6.6; Virginia, 7.2; Kentucky, 9.9; Kansas, 11.3; and New Hampshire 12.5.

Among the registration cities of 100,000 population or over in 1910, San Francisco had the highest rate in 1914—52.4 per 100,000. The rate for Kansas City, Mo., was 40.4; for Oakland and St. Louis, each 36.6; for Omaha, 36; and for Los Angeles, 34.2.

The lowest five rates shown by large cities of the registration area were those for Cambridge (3.6), Lowell (9), Richmond (10.4), Albany (11.7), and Buffalo (13).

VIOLENT DEATHS (EXCLUDING SUICIDE).

All forms of violence, suicide excluded, caused 56,617 deaths in the registration area during the year 1914. The death rate was 85.8 per 100,000 population, a marked decrease from that for 1913 (92.5). Among the principal causes of specified accidental violence, the one of great numerical importance was traumatism by fall, under which 9,904 deaths were compiled. Next in order were accidents on steam railroads, in which 7,062 persons lost their lives; accidental drowning, 5,703; burns (conflagration excepted), 5,021; homicide, 4,847; automobile accidents, 2,826; street-car accidents, 1,673; and injuries by "other vehicles," 2,418.

The death rate due to homicide, 7.3 per 100,000 population, showed a slight increase over the corresponding rate for 1913 (7.2). This very slight increase in the rate for definitely specified homicidal deaths is doubtless due as much to greater precision of statement of cause as to an actual increase in the number of such deaths. In the majority of deaths from homicide the means of violence were firearms.

The rate from automobile accidents was 4.3 per 100,000 population, while that from accidents caused by "other vehicles" was 3.7. Thus it is seen that for the second time—the first being the year 1913—the deaths due to automobile accidents and injuries exceeded those caused by other vehicles. The expression "other vehicles" refers principally to horse-drawn vehicles, although a few deaths due to motorcycle and bicycle accidents are included under this heading.

Among the registration states the highest rate for violent deaths (excluding suicide) was that for Montana (128.5). The rate for California was 113.4; for North Carolina (municipalities of 1,000 population or over in 1910), 108; for Utah, 103; and for Pennsylvania, 97.2. The lowest rate was that for Kansas (65.3 per 100,000 population), and the other states for which notably low rates were in evidence are Wisconsin (68.7), Maine (72.2), Rhode Island (74.4), and Massachusetts, (75.2).

Birmingham had the highest rate among the cities of 100,000 population or over in 1910 (197.4), and the mortality from these causes was also high in Memphis (171.1), Scranton (157.1), Richmond (145.3), and Atlanta (118.2). The five cities which showed the lowest mortality from violence, excluding suicide, were Fall River (48.6), Grand Rapids (50.3), Denver (55.8), Milwaukee (59.1), and Rochester (64.0.)

ACCURACY OF STATISTICS OF CAUSES OF DEATH.

The compiler of mortality statistics is dependent upon physicians for the statements of cause of death which he uses as the basis for all tables showing deaths by cause. When all is said, the statistical system used by any office, the methods of collating and presenting data in tabular form, the calculation of death rates, and other processes necessary in the reduction of data to statistical tables showing causes of death, are all secondary to the securing of correct and specific statements of cause of death—statements that describe all of the known conditions that were factors in any given case.

The obstacles that the compiler must overcome before he is able to present a table showing with reasonable accuracy the mortality chargeable to each of the diseases and forms of violence represented by the 189 titles of the International List of Causes of Death are many and serious. In the first place, it is not practicable to attempt the tabulation of each and every cause of death that is reported on death certificates. To do so would mean the tabulation of causes of death on an alphabetical basis. It is hardly necessary to point out that such a method would be altogether impracticable for areas with hundreds of thousands of deaths, because it would involve the statement of the numbers of deaths reported as due to conditions covered by thousands of different names; and if such a compilation were published it would be necessary for each user to pick out synonymous expressions covering the same or closely related morbid conditions in order to obtain information with respect to the mortality chargeable to any disease or class of diseases.

Again, there are encountered each year in the work of this bureau several hundred thousand certificates of death on each of which the names of two or more diseases appear. All systems of classification in present use for areas where so many deaths occur annually are based upon the principle that each death must be charged to a single cause. This means that if two or more morbid conditions are stated on a certificate and the physician has not indicated plainly which was the chief or primary cause, the compiler must select one of them as the heading under which the death shall be classified. Unfortunately he can not depend upon the order in which the terms are written; nor can he rely upon the position of a term on the certificate with respect to its reported status as the "cause of death" or the "contributory cause," since it has been demonstrated that these terms are used with different and diametrically opposed meanings not only by physicians, but by registration officers.

It is axiomatic that the cause of death must be stated accurately before it can be classified accurately. It is not stated accurately when one or two of several factors are omitted from the physician's report. It is not stated accurately when the physician fails to write on the death certificate a qualifying term which, if reported, would materially affect the classification of the death; for example, a death from tuberculous peritonitis reported as due to "peritonitis" represents an error of omission and one that, if not corrected, is instrumental in causing the death to be wrongly classified, not only with reference to the title of the International List of Causes of Death to which, on the basis of the incomplete description, it must be assigned, but also with reference to the class or group of causes into which the list is divided.

For years one of the spheres of activity of the Bureau of the Census has been its effort to improve the quality of the basic data upon which its statistics of cause of death depend. In this work it has received the hearty cooperation of the state and municipal registration authorities throughout the registration area. These officials, for years, have aided the bureau by obtaining information which in thousands of cases, while not a part of the description of cause of death on the original certificate, was a determining factor in classifying the cause under the proper heading of the International List. The conditions under which the Bureau of the Census works in its annual compilation of mortality statistics render this cooperation very essential, and the spirit in which these officials have given it is largely responsible for the great improvement in the quality of our cause-of-death data to-day as compared with a few years ago.

In general, in its endeavors to secure specific descriptions of causes of death, the bureau has adopted the plan of calling the attention of the registration officials to statements which were unsatisfactory on account of errors of omission or commission. The registration officials, in turn, communicate with physicians, coroners, and midwives and forward to the bureau such additional data as they are able to obtain. This work has, necessarily, been educational, and, so far as certain of the ill-defined returns, once most frequently encountered, are concerned, the efforts of the bureau and of the registration officials have had telling effect. The condition is one that is deeply rooted, and the cure, all must realize, can not be effected in a day. So many unsatisfactory statements of cause of death have been encountered that it has been altogether impracticable to attempt to correct more than a small percentage of them, since to do so would necessitate very great delay in the publication of the bureau's mortality reports. For years, therefore, the plan adopted has been that of returning only those statements which were, at the same time, frequently encountered and easily corrected. For example, a report of "cancer," "carcinoma," or "malignant tumor" was

returned with a request for statement of the seat of the disease; one of "operation," "surgical shock," "hysterectomy," etc., was returned and information sought as to the cause for the relief of which the operation was performed; a return of "gunshot wound," "drowning," etc., was sent back for information as to whether the death was assignable to the class of accidents, of suicides, or of homicides. The continual decrease from year to year in the frequency with which reports of this kind are received by the bureau is very gratifying and can be attributed to the fact that those who formerly made them are coming to realize that they will not be accepted and are now describing conditions more precisely, and also to the fact that when such reports do come in to the state and municipal registration authorities these officials often secure the clarifying data from the local registrars before sending transcripts of the certificates to this bureau.

In its effort to improve basic cause-of-death data, the Bureau of the Census, in addition to working through the medium of registration officials, has sent to the physicians of the country two pamphlets bearing on this subject, namely, "Relation of Physicians to Mortality Statistics" and "Physicians' Pocket Reference to the International List of Causes of Death." The former was published in 1903 and the first and second editions of the latter in 1911 and 1913, respectively.

The two principal objects sought by the distribution of these pamphlets were first, to acquaint physicians with the form, scope, and requirements of the International List of Causes of Death and, second, to emphasize the fact that the value of statistics of cause of death depends upon the lucidity and completeness with which the profession, which is the fundamental source of the basic data, supplies the information. With these ends in view, each of these pamphlets includes an arrangement of the titles of the International List, together with comments on some of the principal undesirable terms commonly used in reporting causes of death; these comments state the reasons why each term is undesirable and present suggestions for more definite statement.

In 1912 the bureau decided to make a test inquiry in order to ascertain, by communicating directly with physicians who had made use of unsatisfactory terms in reporting causes of death, whether sufficient corrective data could thus be secured to justify the bureau in making use of this method. Registration officials throughout the registration area were consulted and, in nearly every instance, agreed that the project was one which would be useful from an educational standpoint and would supplement their own efforts to obtain specific statements of cause of death. Five of these undesirable terms were selected, and, in cases where they had been employed *without qualification*, circular letters were sent to the physicians who had signed the death certificates. These letters requested any additional statement or information relative to the cause of death that would permit more satisfactory classification, and with each was inclosed a copy of the Physicians' Pocket Reference to the International List of Causes of Death, the paragraph therein devoted to the unsatisfactory nature of the term used being marked. The five terms selected for this test were "meningitis," "paralysis," "convulsions," "pneumonia," and "peritonitis." In Mortality Statistics, 1911 (pp. 36–38), is given a discussion of the results of this test. It will suffice here to say that approximately 2,000 replies were received and that as the result of the additional information the physicians supplied there was a net change in classification in 57.1 per cent of the cases involved.

In 1914 the bureau conducted a further and broader test along these lines; and in the following table are given, for each of the principal unsatisfactory terms covered, the number and per cent of changes in classification made on the basis of the information thus obtained, and the numbers of the International titles principally affected.

UNSATISFACTORY TERM.	Number of replies.	Number of changes in classification.	Per cent changed.	International titles and subtitles (detailed list) principally affected.
Septicemia—sepsis	70	48	68.6	137, 152[2]
Cerebral abscess	46	29	63.0	30, 76, 146, 172
Meningitis, cerebral	301	216	71.8	30, 37, 61[3], 76, 104, 146
Meningitis, spinal meningitis				
Cerebrospinal meningitis (undefined)	187	150	80.2	30, 61[3]
Cerebral softening	67	38	56.7	64, 81, 82
Paralysis, hemiplegia	585	444	75.9	37, 63[2], 64, 67
Convulsions, (5 years and over)	13	11	84.6	138
Convulsions (under 5 years)	173	81	46.8	104, 151[1], 152[1]
Cerebral tumor	85	43	50.6	30, 37, 45
Acute cardiac dilatation	215	51	23.7	78, 81, 120
Bronchopneumonia	1,035	225	21.7	6, 8, 10, 104
Pneumonia (unqualified)	1,743	658	37.8	6, 8, 10, 91
Pleurisy	50	31	62.0	28, 92
Pulmonary congestion	195	151	77.4	79, 91, 92, 120
Pulmonary abscess and hemorrhage	54	38	70.4	28, 92
Gastritis, indigestion	519	233	44.9	56, 79, 102, 104, 105
Acute indigestion, etc.				
Peritonitis	155	109	70.3	31, 108, 132, 137
Bright's disease, acute	449	119	26.5	7, 10, 120, 178
Nephritis, acute				
Uremia	188	65	34.6	119, 126, 138
Salpingitis, pyosalpinx	96	77	80.2	38, 137
Dropsy, anasarca, ascites	41	34	82.9	79, 113, 120
Debility, inanition. Under 1 year.	742	391	52.7	37, 103, 104, 151[1], 152[1], 153
Marasmus. 1 to 69 years.	69	42	60.9	28, 104
Malnutrition, etc. 70 years and over.	33	13	39.4	79, 92
Heart failure	61	43	70.5	79, 80
Other unsatisfactory terms covered by letters of inquiry	355	121	34.1	37, 63[2], 104, 120
Total	7,527	3,461	46.0	10, 30, 37, 38, 61[3], 76, 137, 153, 178, and others.

As noted in the comment on this subject in Mortality Statistics, 1911 (pp. 36–38), the effect upon the figures relating to the "definite causes" is a very important consideration in connection with work involving the gathering of corrective cause-of-death data. For example, of the 4,461 deaths charged to Measles for 1914, there were 64 classified under this title which

would have been assigned elsewhere (chiefly to Bronchopneumonia and "Pneumonia") had not replies to the bureau's letters to physicians supplied additional data. Without these 64 deaths the number charged to Measles would have been 4,397; these 64 cases, therefore, added as a result of the information the bureau secured from physicians, increased the figures that would have been published by about 1.5 per cent.

Approximately 25 per cent of all the transcripts of death certificates for 1914 were examined with a view to selecting cases for use in this test; and these cases were selected from a large number of registration units in all parts of the area, so as to make them representative of average conditions throughout the area. It seems safe to assume, therefore, that examination of the remaining 75 per cent and correspondence with the physicians in doubtful cases would have quadrupled the number of changes in classification, and that the percentages of increase given below for some of the causes of death affected would, if multiplied by 4, denote the probable increases for these causes if all of the transcripts bearing incomplete statements had been made the basis of letters of inquiry to the physicians with requests for more definite information.

For the causes of death noted below the figures given show the actual percentages of increase brought about by changes in classification made as a result of correspondence with physicians: Measles, 1.5; Whooping cough, 1.2; Influenza, 2; Tuberculous meningitis, 1.4; Syphilis, 2; Gonococcus infection, 30.4; Cerebrospinal fever, 23.4; Cerebral hemorrhage, Apoplexy, 0.6; Diseases of ears, 2.2; Ulcer of stomach, 0.7; Diarrhea and enteritis (under 2 years), 0.6; Appendicitis and typhlitis, 0.4; Puerperal septicemia, 1.4; Puerperal albuminuria and convulsions, 0.9; Diseases of the bones, 0.5; Premature birth, 0.4; Injuries at birth, 0.8; Lack of care, 11.3; Traumatism by fall, 0.3; Excessive cold, 3.3.

In the case of bronchopneumonia, the bureau sent out a special form letter to physicians asking if the disease occurred as a complication or sequel of some other disease or abnormal condition, with a request that if this was the fact the physician state clearly the nature of the primary cause. To this letter 1,035 replies were received, on the basis of which the classification was changed in 225 cases. On the other hand, 562 additions to bronchopneumonia were made as the result of inquiries sent out in regard to other reports. The net change, therefore, indicates that this is one of the causes for which the number of deaths is understated. An estimate of the percentage of understatement is not made, however, by reason of the fact that the inquiries sent out related almost entirely to cases of decedents under 10 years of age.

The indefinite terms given in the table on page 35 do not represent all of the unsatisfactory statements encountered on certificates of death. The inquiry of 1914, however, was along somewhat broader lines than that of 1912, and it is expected that future inquiries of this character will be still further extended. It must be borne in mind, moreover, that this work is undertaken not only on account of the effect it will have upon the published figures for any given year but also on account of its educational value, supplemented as it is by the earnest cooperation of registration officials.

SUMMARY AND RATE TABLES

TABLE I A.—POPULATION, DEATHS (EXCLUSIVE OF STILLBIRTHS), AND DEATH RATES PER 1,000 POPULATION, IN THE REGISTRATION AREA, ITS MAIN SUBDIVISIONS, EACH REGISTRATION STATE (BY CITIES AND RURAL DISTRICTS), AND EACH GROUP OF REGISTRATION CITIES IN NONREGISTRATION STATES: 1914.

[All death rates are based upon the total deaths, including deaths of nonresidents and deaths in hospitals and institutions. The term "cities" indicates municipalities of 10,000 or more inhabitants in 1910, smaller places being included with the "rural part of registration states." Groups with very low rates, due possibly to incomplete registration or to overestimates of population, are designated by daggers (†).]

AREA.	POPULATION. Census of April 15, 1910.	POPULATION. Estimated as of July 1, 1914.	Number of deaths, 1914.	Death rate per 1,000 population, 1914.

TABLE I B.—POPULATION, DEATHS (EXCLUSIVE OF STILLBIRTHS), INCLUDING AND EXCLUDING DEATHS OF NONRESIDENTS, AND DEATH RATES PER 1,000 POPULATION IN EACH REGISTRATION CITY AND EACH RURAL REGISTRATION UNIT: 1914.

[Minor areas containing state insane asylums are designated by asterisks (*). Areas with very low rates, due possibly to incomplete registration, or to overestimates of population, are designated by daggers (†). Figures for white and colored are shown separately for areas (except as indicated in the footnotes) only when the colored population of the area formed at least 5 per cent of the total, or numbered 10,000 or over in 1910. The term "cities" indicates municipalities of 10,000 or more inhabitants in 1910.]

[2] No nonresidents reported.
[3] Includes Pend Oreille County; separate estimated populations not available.
[4] Includes National Military Home.

TABLE II.—DEATHS (EXCLUSIVE OF STILLBIRTHS), AND DEATH RATES PER 100,000 POPULATION, BY CAUSES, ACCORDING TO THE DETAILED INTERNATIONAL LIST, FOR THE REGISTRATION AREA: 1911 TO 1914.

[The causes of death originally classified according to the first revision of the International List, which was in effect for the years 1900 to 1909, are rearranged, as far as practicable, to correspond with the second revision, in effect Jan. 1, 1910. Changes depending upon new titles, or markedly affecting the comparability of the figures, are indicated by asterisks (*) following the titles, and reference should be made to the statements in the text (p. 22) relative to changes in classification.]

TABLE III.—DEATH RATES PER 100,000 POPULATION IN THE REGISTRATION AREA

[All death rates are based upon the total deaths, including deaths of nonresidents and deaths in hospitals and institutions. Minor areas containing state insane asylums Figures for white and colored are shown separately for minor subdivisions (except as indicated in the footnotes) only when the colored population of the subdivision under causes of death correspond to those of the abridged International List (see p. 21).]

	AREA AND COLOR.	DEATH RATE PER 100,000 POPULATION FROM—														
		All causes.[1]	Typhoid fever.	Malaria.	Smallpox.	Measles.	Scarlet fever.	Whooping cough.	Diphtheria and croup.	Influenza.	Erysipelas.	Tuberculosis of the lungs.	Tuberculous meningitis.	Other forms of tuberculosis.	Rheumatism.	Cancer.

[1] Exclusive of stillbirths.

[2] Includes District of Columbia.

AND ITS SUBDIVISIONS, BY COLOR OF DECEDENT AND CAUSE OF DEATH: 1914.

are designated by asterisks (*). Areas with very low rates, due possibly to incomplete registration or to overestimates of population, are designated by daggers (†). formed at least 5 per cent of the total, or numbered 10,000 or over in 1910. The term "cities" indicates municipalities of 10,000 inhabitants or over in 1910. Numbers

INDEX.

Abdominal tuberculosis. *See* Tuberculosis (all forms).
Abscess, acute, deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.
Absorption of deleterious gases (conflagration excepted), deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Accidental or undefined causes (total), deaths from, 64; in cities and rural districts, 394; by sex, 418; by age, 418, 446.
—— death rate, 66, 158.
Accidents and injuries, automobile, railroad, and street-car, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Addison's disease, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Age, deaths by, 192, 218, 408, 444, 567.
Alcoholism (acute or chronic), deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Amputations, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Anemia, chlorosis, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Aneurism. *See* Arteries, diseases of, etc.
Angina pectoris, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Ankylostomiasis, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Anthrax, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Apoplexy. *See* Cerebral hemorrhage, etc.
Appendicitis and typhlitis, deaths from, 63; by color, 305; in cities and rural districts, 390; by sex, 414; by age, 414, 445, 567.
—— death rate, 67, 154.
Arteries, diseases of, atheroma, aneurism, etc., deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Asiatic cholera, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567.
—— death rate, 152.
Asthma, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Atheroma. *See* Arteries, diseases of, etc.
Atrophy. *See* Congenital debility, etc.
Automobile accidents and injuries. *See* Accidents, etc.
Beriberi, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Biliary calculi, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 154.
Bladder, diseases of, deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.
Bones, diseases of (tuberculosis excepted), deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Bones and organs of locomotion, diseases of, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Breast, nonpuerperal diseases of (cancer excepted), deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.
Breast, puerperal diseases of, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Bright's disease, deaths from, 32, 63; by color, 305; in cities and rural districts, 392; by sex, 414; by age, 414, 445, 567.
—— death rate, 67, 156.
Bronchitis (acute and chronic), deaths from, 63; by color, 305; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 67, 154.
Bronchopneumonia, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 154.
Burns (conflagration excepted), deaths from, 64; in cities and rural districts, 394; by sex, 418; by age, 418, 446.
—— death rate, 158.

Calculi of the urinary passages, deaths from, 63; in cities and rural districts, 392; by sex, 414; by age, 414, 445.
—— death rate, 156.
Cancer and other malignant tumors (total), deaths from, 29, 62; by color, 305; in cities and rural districts, 388; by sex, 410; by age, 410, 444, 567.
—— death rate, 66, 152.
Causes of death, 62, 304, 388.
Cellular tissue, diseases of. *See* Skin, etc.
Cerebral hemorrhage, apoplexy, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 154.
Cerebral hemorrhage and softening, deaths from, by color, 305; by age, 567.
—— death rate, 67. *See also* Softening of the brain.
Cerebrospinal fever, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Cerebrospinal meningitis. *See* Meningitis (total).
Childbirth, deaths following, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Chinese, deaths of, 218.
Chlorosis. *See* Anemia, etc.
Cholera nostras, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567.
—— death rate, 152.
Chorea, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 445.
—— death rate, 154.
Chyluria, deaths from, 63; in cities and rural districts, 392; by sex, 414; by age, 414, 445.
—— death rate, 156.
Circulatory system, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Cirrhosis of the liver, deaths from, 63; by color, 305; in cities and rural districts, 390; by sex, 414; by age, 414, 445, 567.
—— death rate, 67, 154.
Cities in nonregistration states, deaths in, 39; by months, 174, 623; by age, sex, color, and nativity, 222; by cause, 388; by days, weeks, and months, 660.
—— death rate, 66.
Cities in registration states, deaths in, 39; by months, 174, 622; by age, sex, color, and nativity, 220; by cause, 388; by days, weeks, and months, 660.
—— death rate, 66, 152.
Cities of 100,000 population or over, deaths in, by age, 218, 567; by sex, color, and nativity, 218; by cause, 567; by months, 632; by days, weeks, and months, 673.
—— death rate, 66.
Cold, excessive, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Color, deaths by, 183, 192, 218, 304, 420, 432.
Colored population, deaths of, 10, 39, 183; by age, 192, 218, 432; by sex, 218, 432; by cause, 304, 432.
—— death rate, 66.
Conflagration, deaths from, 64; in cities and rural districts, 394; by sex, 418; by age, 418, 446.
—— death rate, 158.
Congenital debility, deaths from, by months, 622; by days, weeks, and months, 660.
Congenital debility, "atrophy," "marasmus," etc., deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Congenital debility, icterus, and sclerema (total), deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Congenital debility and malformations, deaths from, by color, 305; by age, 567.
—— death rate, 67.

Congenital malformations (stillbirths not included) (total), deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Congenital malformations of the heart, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Convulsions (nonpuerperal), deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 445; by days, weeks, and months, 660.
—— death rate, 154.
Convulsions of infants, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 445.
—— death rate, 154.
Croup. *See* Diphtheria, etc.
Cysts and other tumors of the ovary, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.

Death rates, in registration area, 11, 39; in registration states and cities, 12; in foreign countries, 13; by color, 16, 66; by cause, 22, 62, 66; in cities and rural districts, 152.
Deaths, in registration area, 10, 39; of nonresidents, 18; by cause, 62, 304, 388; by months, 174, 622; by color, 183, 192, 218, 304, 420, 432; by nativity, 183, 218; by age, 192, 218, 408, 444, 567; by sex, 218, 408; by days, weeks, and months, 660.
Diabetes, deaths from, 62; by color, 305; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 67, 152.
Diarrhea and enteritis (under 2 years), deaths from, 32, 63; by color, 305; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 67, 154.
Diarrhea and enteritis (2 years and over), deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by months, 622.
—— death rate, 154.
Digestive system, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Diphtheria and croup, deaths from, 26, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 66, 152.
Disseminated tuberculosis. *See* Tuberculosis (all forms).
Drowning, accidental, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Dysentery, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444; by days, weeks, and months, 660.
—— death rate, 152.

Ears, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Electricity (lightning excepted), deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Embolism and thrombosis, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Embolus. *See* Puerperal phlegmasia alba dolens, etc.
Encephalitis, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Endocarditis, acute, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Enteritis. *See* Diarrhea, etc.
Epidemic diseases, deaths from, 27, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567.
—— death rate, 152.
Epilepsy, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 445.
—— death rate, 154.
Erysipelas, deaths from, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444; by days, weeks, and months, 660.
—— death rate, 66, 152.
Esophagus, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Exophthalmic goiter, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
External causes, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446; by days, weeks, and months, 660.
—— death rate, 158.
Eyes and their annexa, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.

Female genital organs, diseases of, deaths from, by age, 567. *See also* Salpingitis, etc.
Foreign countries, death rates of, 13.
Foreign-born white population, deaths of, 183, 218.
Fractures (cause not specified), deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Furuncle, deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.

Gangrene, deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.
Gangrene of the lung, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
General diseases, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Genito-urinary system and annexa, nonvenereal diseases of, deaths from, 63; in cities and rural districts, 392; by sex, 414; by age, 414, 445.
—— death rate, 156.
Glanders, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Goiter. *See* Exophthalmic goiter.
Gonococcus infection, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Gout. *See* Rheumatism, etc.

Heart, organic diseases of, deaths from, 30, 63; by color, 305; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by days, weeks, and months, 660.
Heart, organic diseases of, death rate, 67, 154.
Heat, effects of, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Hemorrhage; other diseases of the circulatory system, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Hemorrhoids. *See* Veins, diseases of, etc.
Hernia, intestinal obstruction (total), deaths from, 63; by color, 305; in cities and rural districts, 390; by sex, 414; by age, 414, 445, 567.
—— death rate, 67, 154.
Homicide (total), deaths by, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Hydatid tumor of the liver, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 154.
Hydrocephalus, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.

Icterus. *See* Congenital debility, etc.
Ill-defined diseases, deaths from, 65; by color, 305; in cities and rural districts, 394; by sex, 418; by age, 418, 447, 567; by days, weeks, and months, 660.
—— death rate, 67, 158.
Indians, deaths of, 218.
Infancy, early, deaths in, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446; by days, weeks, and months, 660.
—— death rate, 156.
Infantile paralysis. *See* Poliomyelitis, etc.
Influenza, deaths from, 26, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 66, 152.
Injuries. *See* Accidents, etc.
Injuries at birth, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446; by days, weeks, and months, 660.
—— death rate, 156.
Injuries by animals, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Intestinal obstruction. *See* Hernia, etc.
Intestinal parasites, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 154.
Intestines, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 154.

Japanese, deaths of, 218.
Joints, diseases of (tuberculosis and rheumatism excepted), deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.

Kidneys and annexa, diseases of, deaths from, 63; in cities and rural districts, 392; by sex, 414; by age, 414, 445.
—— death rate, 156.

Lack of care, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.

Landslide, other crushing, deaths from, 64; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Larynx, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Lead poisoning, chronic, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Leprosy, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Leukemia, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Lightning, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Liver, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 156.
Lobar pneumonia. *See* Pneumonia (total).
Locomotor ataxia, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 154.
Lymphangitis. *See* Lymphatic system, diseases of, etc.
Lymphatic system (lymphangitis, etc.), diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.

Malaria, deaths from, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622.
—— death rate, 66, 152.
Male genital organs, nonvenereal diseases of, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Malformations, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446; by days, weeks, and months, 660.
—— death rate, 156. *See also* Congenital malformations.
Marasmus. *See* Congenital debility, etc.
Measles, deaths from, 24, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 66, 152.
Meningitis (total), deaths from, 62; by color, 305; in cities and rural districts, 388; by sex, 410; by age, 410, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 67, 152.
Mental alienation, forms of, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 444.
—— death rate, 154.
Miliary fever, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Miliary tuberculosis, acute. *See* Tuberculosis (all forms).
Mouth and annexa, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Mycoses, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.

Nasal fossae, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
Nasal fossae, diseases of, death rate, 154.
Native white population, deaths of, 183, 218.
Nativity, deaths by, 183, 218.
Negroes, deaths of, 183, 218.
Nephritis, acute, deaths from, 32, 63; by color, 305; in cities and rural districts, 392; by sex, 414; by age, 414, 445, 567.
—— death rate, 67, 156.
Nervous system, diseases of, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Neuralgia and neuritis, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 445.
—— death rate, 154.
Neuritis. *See* Neuralgia, etc.
Nonresidents, deaths of, 18.

Occupation poisonings, chronic, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Old age, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446.
—— death rate, 156.
Organs of locomotion, diseases of. *See* Bones, etc.

Paralysis of the insane, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 444.
—— death rate, 154.
Paralysis without specified cause, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 444.
—— death rate, 154.
Pellagra, deaths from, 27, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Pericarditis, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Peritonitis, simple (nonpuerperal), deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 156.
Pharynx, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Phlebitis. *See* Veins, diseases of, etc.
Plague, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Pleurisy, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Pneumonia (total), deaths from, 31, 63; by color, 305; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 67, 154.
Poisoning by food, deaths from, 64; in cities and rural districts, 394; by sex, 418; by age, 418, 446.
—— death rate, 158.
Poisonings, acute, deaths from, 64; in cities and rural districts, 394; by sex, 418; by age, 418, 446.
—— death rate, 158.
Poliomyelitis, acute anterior (infantile paralysis), deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 154.
Pott's disease, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
Pott's disease, death rate, 152.
Pregnancy, accidents of, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Premature birth, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446; by days, weeks, and months, 660.
—— death rate, 156.
Prostate, diseases of, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Puerperal albuminuria and convulsions, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Puerperal fever, deaths from, by color, 305; by age, 567.
—— death rate, 67.
Puerperal hemorrhage, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Puerperal phlegmasia alba dolens, embolus, sudden death, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Puerperal septicemia, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Pulmonary apoplexy. *See* Pulmonary congestion, etc.
Pulmonary congestion, pulmonary apoplexy, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Pulmonary emphysema, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Purulent infection and septicemia, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.

Rabies, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Railroad accidents and injuries. *See* Accidents, etc.
Registration area, growth of, 1880–1914, 9; states included in, 10; deaths in, 39; by cause, 62, 304, 388; by months, 174, 622; by color, 183, 192, 218, 304, 420, 432; by nativity, 183, 218; by age, 192, 218, 408, 444; by sex, 218, 408; by days, weeks, and months, 660.
—— death rate, 62, 66.
Registration cities, deaths in, 39; by months, 174, 623; by color, 183, 194, 222, 306; by nativity, 183, 222; by age, 194, 222; by sex, 222; by cause, 306, 388; by days, weeks, and months, 661.
—— death rate, 66.
Registration states, deaths in, 39; by months, 174, 622; by color, 183, 192, 218, 304; by nativity, 183, 218; by age, 192, 218, 447; by sex, 218; by cause, 304, 388; by days, weeks, and months, 660.
—— death rate, 66.
Relapsing fever, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Respiratory system, diseases of, deaths from, 63; by color, 305; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567.
—— death rate, 67, 154.

Rheumatism, acute articular, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Rheumatism, chronic, and gout, deaths from, 62; by color, 304; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 66, 152.
Rickets, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Rural part of registration states, deaths in, 39; by months, 174, 622; by age, sex, color, and nativity, 220; by cause, 330, 388; by days, weeks, and months, 661.
—— death rate, 66.

Salpingitis and other diseases of the female genital organs, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Scarlet fever, deaths from, 25, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 66, 152.
Sclerema. *See* Congenital debility, etc.
Scurvy, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 152.
Senility, deaths from, 64; in cities and rural districts, 392; by sex, 416; by age, 416, 446, 567.
—— death rate, 156.
Septicemia. *See* Purulent infection, etc., *and* Puerperal septicemia.
Sex, deaths by, 218, 408.
Skin and cellular tissue, diseases of, deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.
Smallpox, deaths from, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567.
—— death rate, 66, 152.
Softening of the brain, deaths from, 63; in cities and rural districts, 390; by sex, 410; by age, 410, 444.
—— death rate, 154.
Spinal cord, diseases of, deaths from, 62; in cities and rural districts, 388; by sex, 410; by age, 410, 444.
—— death rate, 154.
Spleen, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 156.
Starvation, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
Starvation, death rate, 158.
Stomach, diseases of (cancer excepted), deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445, 567; by days, weeks, and months, 660.
—— death rate, 154.
Street-car accidents and injuries. *See* Accidents, etc.
Sudden deaths, number of, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158. *See also* Puerperal phlegmasia alba dolens, etc.
Suicide, deaths from, 33, 64; by color, 305; in cities and rural districts, 392; by sex, 416; by age, 416, 446, 567; by months, 622.
—— death rate, 67, 158.
Syphilis, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444; by days, weeks, and months, 660.
—— death rate, 152.

Tetanus, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444; by days, weeks, and months, 660.
—— death rate, 152.
Thrombosis. *See* Embolism, etc.
Thyroid body, diseases of, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Traumatism, deaths from, 65; in cities and rural districts, 394; by sex, 418; by age, 418, 447.
—— death rate, 158.
Tuberculosis (all forms), deaths from, 28, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Tuberculosis of the lungs, deaths from, 28, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 66, 152.
Tuberculous meningitis, deaths from, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by days, weeks, and months, 660.
—— death rate, 66, 152.
Tumors, malignant. *See* Cancer, etc.
Typhlitis. *See* Appendicitis, etc.
Typhoid fever, deaths from, 24, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622.
—— death rate, 66, 152.
Typhus fever, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567.
—— death rate, 152.

Ulcer of the stomach, deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Urethra, diseases of, urinary abscess, etc., deaths from, 64; in cities and rural districts, 392; by sex, 414; by age, 414, 446.
—— death rate, 156.
Urinary abscess. *See* Urethra, diseases of, etc.
Uterine hemorrhage (nonpuerperal), deaths, from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Uterine tumors (noncancerous), deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.
Uterus, diseases of, deaths from, 64; in cities and rural districts, 392; by age, 414, 446.
—— death rate, 156.

Varices. *See* Veins, diseases of, etc.
Veins, diseases of (varices, hemorrhoids, phlebitis, etc.), deaths from, 63; in cities and rural districts, 390; by sex, 412; by age, 412, 445.
—— death rate, 154.
Violent deaths (excluding suicide), number of, 33; by color, 305; in cities and rural districts, 394; by sex, 418; by age, 418, 447, 567; by months, 622.
—— death rate, 67, 158.

White population, deaths of, 10, 39, 183; by nativity, 183, 218; by age, 192, 218, 420; by sex, 218, 420; by cause, 304, 420.
—— death rate, 66.
White swellings, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
Whooping cough, deaths from, 25, 62; by color, 304; in cities and rural districts, 388; by sex, 408; by age, 408, 444, 567; by months, 622; by days, weeks, and months, 660.
—— death rate, 66, 152.

Yellow atrophy of the liver, acute, deaths from, 63; in cities and rural districts, 390; by sex, 414; by age, 414, 445.
—— death rate, 154.
Yellow fever, deaths from, 62; in cities and rural districts, 388; by sex, 408; by age, 408, 444.
—— death rate, 152.
