STRATEGIC OBJECTIVE: HUMANITARIAN ASSISTANCE							
Program Area		Protection, Assistance and Solutions					
Performance Indicator #48-i		Percent of Monitored Sites With Controlled Populations (<i>Refugee Camps</i>) Worldwide with Less than 10% Global Acute Malnutrition Rate					
Indicator Justification: Nutritional status is an indicator for assessing the severity of humanitarian crisis, together with Crude Mortality Rate. In emergencies, weight loss among children 6-59 months is used as a proxy indicator for the general health of the entire community. Global Acute Malnutrition (GAM) includes all malnourished children whether they have moderate wasting, severe wasting or edema, or some combination of these conditions. GAM is defined as weight-for-height ratios less than two standard deviations below the mean (Z score of less than -2), or less than 80% median weight-for-height, or the presence of nutritional edema.							
2004 Results	2005 Results	2006 Results	2007 Target	2007 Results	2007 Rating	2008 Target	2009 Target
92%	94%	98%	90%	91%	▲ Above Target	92%	92%
DATA VERIFICATION AND VALIDATION							
Data Source: Reports from the Complex Emergencies Database (CE-DAT, United Nations High Commissioner for Refugees (UNHCR), World Food Program, World Health Organization, other international and nongovernmental organizations, as well as the U.S. Centers for Disease Control and Prevention.							
Data Quality: The Department of State Bureau of Population, Refugees and Migration is collaborating with USAID and international organizations and non-governmental partners to develop a standardized methodology for collecting nutritional status data. Because humanitarian agencies have not yet adopted a common, standard methodology for collecting data on nutritional status, the reliability of these data varies. Monitored sites include refugee camps and settlements identified by UNHCR; recent data are not available for all sites.
