# MISCELLANEOUS CLAYS STATISTICS<sup>1</sup>

## U.S. GEOLOGICAL SURVEY

[All values are in metric tons (t) miscellaneous clays unless otherwise noted]

Last modification: November 18, 2008

Year	Production	Imports	Exports	Apparent consumption	Unit value (\$/t)	Unit value (98\$/t)
2000	23,700,000	23,800	357,000	23,400,000	5.70	5.40
2001	23,200,000	26,100	337,000	22,900,000	5.56	5.12
2002	23,000,000	29,900	449,000	22,600,000	6.43	5.83
2003	23,100,000	26,063	416,000	22,700,000	6.09	5.39
2004	24,600,000	30,332	586,000	24,000,000	7.97	6.88
2005	24,300,000	25,000	634,000	23,700,000	7.24	6.04
2006	24,200,000	26,000	607,000	23,600,000	10.04	8.11
2007	20,600,000	23,000	279,000	20,340,000	10.49	8.25

<sup>1</sup>Compiled by D.A. Buckingham (retired) and R.L. Virta.

Data are calculated, estimated, or reported. See notes for more information.

## Clay Worksheet Notes

### Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

### Production

Data are domestic clay material sold or used by producers. Prior to 1943 most of the clay used for the production of brick, sewer pipe and other heavy clay products was not included in the production statistics. Data are reported in the MR and the MYB.

### Imports

Data are clay material imported into the United States, as reported in the MR and the MYB.

### Exports

Data are clay material exported from the United States, as reported in the MR and the MYB. Export data are not reported prior to 1916.

### Apparent Consumption

Apparent consumption data are not reported. For the years 1900 to the most recent, apparent consumption data are estimated by using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS}.$$

Data are reported in the MR and the MYB. When clay data for a particular category were unavailable, data were presumed to be zero in making the above calculation.

### Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of clay apparent consumption. Data are estimated by using the following equation:

$$\text{UNIT VALUE} = (\text{PRODUCTION SALES VALUE} + \text{IMPORT VALUE} - \text{EXPORT VALUE}) / (\text{APPARENT CONSUMPTION}).$$

Data are reported in the MR and the MYB. When clay data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

### Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Ball Clay

### Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

### Production

Data are domestic ball clay material sold or used by producers. Data are reported in the MR and the MYB.

### Imports

Import data includes ball, common blue and gross almerode clays. Prior to 1954, data were reported as common clay. Wrought or manufactured clays were included for the years 1954–2006. Datum for 2007 was not available. Data are reported in the MR and the MYB.

### Exports

Export data are ball clay only and were not reported separately prior to 1970. Data are reported in the MR and the MYB.

### **Apparent Consumption**

Apparent consumption data are not reported. For the years 1900 to the most recent, apparent consumption data are estimated by using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS}.$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

### **Unit Value (\$/t)**

Unit value is defined as the value of 1 t of apparent consumption. For the years 1900 to the most recent, unit value data are estimated by using the following equation:

$$\text{UNIT VALUE} = (\text{PRODUCTION SALES VALUE} + \text{IMPORT VALUE} - \text{EXPORT VALUE}) / (\text{APPARENT CONSUMPTION}).$$

Data are reported in the MR and the MYB. When data for a particular category were unavailable, data were presumed to be zero in making the above calculation.

### **Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## **Bentonite**

### **Data Sources**

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

### **Production**

Data are domestic bentonite clay material sold or used by producers. Bentonite sold or used data were reported under the miscellaneous clay category until separately reported in 1930. Data are reported in the MR and the MYB.

### **Imports**

Import data includes bentonite clays. Except for the years 1936–40 and 1952–55, prior to 1964, data were not separately classified but reported under the miscellaneous clay category in the MR publication. Data were not available for the year 1966. Data are reported in the MR and the MYB.

### **Exports**

Bentonite clay export data were not separately classified prior to 1957, but reported under the miscellaneous clay category in the MR publication, except for the years 1939–40, 1942–48. Data were not available for the years 1963 and 1964. Data are reported in the MR and the MYB.

### **Apparent Consumption**

Apparent consumption data are not reported. For the years 1930–64 sold or used data are used to estimate apparent consumption. For the years 1965 to the most recent, apparent consumption was estimated using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS}.$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

### **Unit Value (\$/t)**

Unit value is defined as the value of 1 t of apparent consumption. For the years 1930–64, the sold or used unit value data are used as an estimate for unit value. For the years 1965 to the most recent, unit value was estimated using the following equation:

$$\text{UNIT VALUE} = (\text{PRODUCTION SALES VALUE} + \text{IMPORT VALUE} - \text{EXPORT VALUE}) / (\text{APPARENT CONSUMPTION}).$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

**Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

**Fire Clay****Data Sources**

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

**Production**

Data are fire and stoneware clay material sold or used by domestic producers. Data are reported in the MR and the MYB.

**Imports**

Import data were not reported separately as fire clay prior to 1989. Data are reported in the MR and the MYB.

**Exports**

Export data were not reported separately as fire clay prior to 1916. Data are reported in the MR and the MYB. From 2005–07, exports were estimated because 49%, 51%, and 63% of export tonnage under the HTS code for fire clay for 2005, 2006, and 2007, respectively, was believed to be refractory-grade kaolin.

**Apparent Consumption**

Apparent consumption data are not reported. For the years 1900 to the most recent apparent consumption was estimated using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS.}$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

**Unit Value (\$/t)**

Unit value is defined as the value of 1 t of apparent consumption. For the years 1900 to the most recent, the sold or used unit value data are used as an estimate for unit value. Data are reported in the MR and the MYB.

**Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

**Fuller's Earth****Data Sources**

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

**Production**

Data include fuller's earth material sold or used by domestic producers. Data are reported in the MR and the MYB.

**Imports**

Fuller's earth import data were reported as wrought and unwrought fuller's earths prior to 1934. For the years 1935–82 and 1984–2006, data were reported as fuller's earth. Data for the years 1983 and 2007 were not available. Gross almerode clay was included with fuller's earth data for the years 1953–63. Data are reported in the MR and the MYB.

**Exports**

Export data were not reported separately prior to 1923. Data for the years 1935–55 were reported separately under "Miscellaneous clays" and are reported here. Data are not available for the years 1956–57 and 1963–64. Data are reported in the MR and the MYB.

### **Apparent Consumption**

Apparent consumption data are not reported. For the years 1900 to the most recent apparent consumption was estimated using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS}.$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

### **Unit Value (\$/t)**

Unit value is defined as the value of 1 t of apparent consumption. For the years 1900 to the most recent, unit value was estimated using the following equation:

$$\text{UNIT VALUE} = (\text{PRODUCTION SALES VALUE} + \text{IMPORT VALUE} - \text{EXPORT VALUE}) / (\text{APPARENT CONSUMPTION}).$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

### **Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## **Kaolin**

### **Data Sources**

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

### **Production**

Data include kaolin, china, and paper clay material sold or used by domestic producers, except for the period 1905–12 when paper clay was reported separately. Data are reported in the MR and the MYB.

### **Imports**

Data are kaolin, china and paper clay imports. Data are reported in the MR and the MYB.

### **Exports**

Kaolin china and paper clay export data were not reported prior to 1945, except for the years 1922 and 1942. Data are reported in the MR and the MYB.

### **Apparent Consumption**

Apparent consumption data are not reported. For the years 1900 to the most recent, apparent consumption was estimated using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS}.$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

### **Unit Value (\$/t)**

Unit value is defined as the value of 1 t of apparent consumption. For the years 1900 to the most recent, apparent consumption was estimated using the following equation:

$$\text{UNIT VALUE} = (\text{PRODUCER SALES VALUE} + \text{IMPORT VALUE} - \text{EXPORT VALUE}) / (\text{APPARENT CONSUMPTION}).$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

**Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

**Miscellaneous Clay****Data Sources**

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

**Production**

Data include bentonite, brick, slip and miscellaneous clay material sold or used by domestic producers. Prior to 1905, data were reported as miscellaneous clays. Miscellaneous clays and slip clay were reported separately for the years 1905–34. Brick clay was reported separately for the years 1907–17. Bentonite clay was reported separately beginning in 1930. After 1934, data were reported as common clay. Data are reported in the MR and the MYB.

**Imports**

Data were separately classified as wrought and unwrought clays prior to 1938 and as other clays for the years 1938 to the most recent. Data are not available for the years 1958–69. Data for the years 1930–39 include artificially activated clays. Data are reported in the MR and the MYB.

**Exports**

Export data were not reported prior to 1916 and not available for the years 1958 and 1966. Data includes fuller's earth that was not reported separately, for the years 1916–22, and 1963–64 and bentonite clay prior to 1957. Data does not include fuller's earth for the years 1935–55 and bentonite clay for the years 1939–40 and 1942–48. Data are reported in the MR and the MYB.

**Apparent Consumption**

Apparent consumption data are not reported. For the years 1900 to the most recent, apparent consumption was estimated using the following equation:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION (PRODUCER SALES)} + \text{IMPORTS} - \text{EXPORTS.}$$

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

**Unit Value (\$/t)**

Unit value is defined as the value of 1 t of apparent consumption. For the years 1900 to the most recent, the sold or used unit value data are used as an estimate for unit value. Data are reported in the MR and the MYB.

**Unit Value (98\$/t)**

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.
