

## **FACT SHEET**

### **Commerce Initiates Antidumping Duty Investigation on Sodium Hexametaphosphate from the People's Republic of China**

- On March 1, the Department of Commerce (Department) announced its decision to initiate an antidumping duty investigation on imports of sodium hexametaphosphate (SHMP) from the People's Republic of China.
- ICL Performance Products, LP, (MO), and Innophos, Inc., (NJ), are the petitioners for this investigation.
- The merchandise covered by this investigation includes both technical and food grade SHMP with a P<sub>2</sub>O<sub>5</sub> content from 60 to 71 percent, which is a chemical added to water to increase the solubility of certain ions and to deter the precipitation of certain chemicals. Technical grade SHMP uses include water treatment, personal care products, and dental products. Food grade SHMP is used to enhance flavor and improve shelf life. The product covered by this investigation includes SHMP without regard to physical form, whether glass, sheet, crushed, granule, powder, fines, or other form. However, the product covered by this investigation does not include SHMP when imported in a blend with other materials in which the SHMP accounts for less than 50 percent by volume of the finished product.
- SHMP is classifiable under subheading 2835.39.5000 and may also be imported as a blend or mixture under heading 3823.90.3900 of the Harmonized Tariff Schedule of the United States (HTSUS). SHMP is classified as CAS registry number 68915-31-1, but is also commonly identified by CAS No. 10124-56-8 in the market.

#### **NEXT STEPS**

- The U.S. International Trade Commission (ITC) is scheduled to make its preliminary injury determination on or about March 26, 2007.
- If the ITC determines that there is a reasonable indication that imports from China are materially injuring, or threatening material injury to, the domestic industry, the investigation will continue, and the Department will be scheduled to make its preliminary determination in July 2007.
