## Rochester

### Selected Indicators

This fact sheet presents recent **employment and unemployment** figures for the Rochester Metropolitan Statistical Area, New York State, and the United States. The **Consumer Price Index (CPI)** measures price changes or inflation for particular commodities and services at the retail level. The **Producer Price Index (PPI)** measures price changes or inflation for particular commodities and services at the wholesale level and is widely used by business firms as an escalator in long-term contracts. The **Employment Cost Index (ECI)** measures price changes or inflation of labor costs which includes wages and salaries and employer costs for employee benefits. An **occupational pay relative** is a calculation of pay—wages, salaries, commissions, and production bonuses—for a given metropolitan area relative to the nation as a whole; the calculation controls for differences among areas in occupational composition, establishment, and occupational characteristics, and the fact that data are collected for areas at different times during the year.

Consumer Price Index (1982-84) = 100	Feb. 2008	Feb. 2009	Percent change
<b>All Urban Consumers (CPI-U)</b>
