

State Personal Income

Fourth Quarter of 2005

Per Capita Income for 2005

By David G. Lenze

PERSONAL income grew 2.3 percent in the fourth quarter of 2005. That was the fastest quarterly growth of the current expansion except for the 3.0-percent growth in the fourth quarter of 2004, when the Microsoft Corporation paid a large special dividend.¹ The strong 2005 fourth-quarter growth reflected a strong rebound after exceptional hurricane-related declines in the previous quarter. For the year 2005, growth in U.S. per capita personal income fell to 4.6 percent from 5.0 percent in 2004.

Fourth-Quarter Estimates

The fourth-quarter surge in personal income growth reflected a rebound in Louisiana, where personal income nearly doubled after falling by half in the third quarter. This extreme income oscillation resulted from the fact that BEA's estimates account for all of the uninsured residential structures destroyed by Hurricane Katrina as a charge against rental income in the third quarter. Mississippi's personal income exhibited a similar, though much weaker, oscillation, rising 7.0 percent after declining 3.4 percent. Louisiana's personal income is still below its second-quarter level; Mississippi has surpassed its second-quarter level.

Excluding Louisiana and Mississippi, fourth-quarter personal income growth was still 1.7 percent, the second highest of the expansion (tied with the first quarter of 2004). States in the Plains region, boosted by the farm sector, tended to grow slightly faster than the average (chart 1). States in the Great Lakes region tended to grow the slowest, despite a resurgence in its crucial manufacturing sector. For the first time in 2 years, manufacturing earnings in the Great Lakes region grew faster than manufacturing earnings grew nationally. Although Hurricane Wilma buffeted Florida in the fourth quarter, it had a negligible effect on the state's total personal income. Florida grew 1.9 percent, faster than the average excluding Louisiana and Mississippi.

Earnings

Earnings—the sum of wages, wage supplements, and proprietors' income—jumped 16 percent in Louisiana and 4.3 percent in Mississippi from third-quarter levels that were reduced by uninsured hurricane losses of proprietors. The rebound in proprietors' income more than offset wage declines of 5.9 percent in Louisiana and 0.4 percent in Mississippi in the fourth quarter, the first full quarter after the natural disasters.

Nationally, earnings grew 1.5 percent in the fourth quarter. Professional services contributed 0.25 percentage point to the growth, construction contributed 0.18 percentage point, and durable-goods manufacturing contributed 0.14 percentage point.

Professional services was a major contributor to earnings growth in all regions. Construction was particularly important in the Southwest, Rocky Mountain, and Far West regions. Durable-goods manufacturing was a major contributor in the Great Lakes, Plains, and Far West regions. For example, earnings in Washington state's durable-goods manufacturing industry was up 10.6 percent, as workers returned to work after settling a strike at Boeing.

Earnings in the real estate industry fell in all states except Louisiana, Mississippi, and Alabama, which were rebounding from hurricane-related lows. The decline was primarily in proprietors' income and coincided with weakening existing home sales in the fourth quarter. In contrast, real estate wages rose in almost all states.

Dividends, interest, and rent

Net rental income continued to fall in the fourth quarter in all states except Alabama, Louisiana, Mississippi, and Texas, which were rebounding from hurricane-related lows. Net rental income fell 3–5 percent in most states but plummeted 49 percent in Florida, a consequence of Hurricane Wilma's destruction of \$2.6 billion of uninsured residential structures.

Dividends and interest income grew 2–5 percent in every state in response to rising short-term interest rates and general corporate prosperity.

Transfer receipts

Personal current transfer receipts increased 5.7 percent in Florida, primarily because of a gain of \$3.6 billion in

1. For details about the magnitude of the Microsoft dividend and how it affected state personal income, see David G. Lenze, "State Personal Income for the Fourth Quarter of 2004 and State Per Capita Personal Income for 2004," SURVEY OF CURRENT BUSINESS 85 (April 2005): 70–116.

net insurance settlements for insured damage to consumer durable goods. Transfers in most other states increased about 2 percent. However, in Louisiana, Mississippi, and Alabama, transfers declined from levels that were boosted by third-quarter net insurance settlements. Insurance settlements associated with natural disasters are recorded in state personal income in the quarter in which the disaster occurred. The Federal Emergency Management Agency (FEMA) continued to provide assistance to victims of Hurricanes Katrina and Rita; \$2.7 billion was provided to those living in Louisiana in the fourth quarter, \$1.1 billion to those living in Texas, \$0.9 billion to those in Mississippi, and smaller amounts to other states.

Adjustments to state personal income for the fourth quarter of 2005

Florida. Various components of Florida's personal income were adjusted in the fourth quarter to account for damage by Hurricane Wilma (table A). Uninsured losses of residential fixed assets reduced net rental income \$2.6 billion. Proprietors' income was reduced \$1.2 billion; uninsured crop losses reduced farm proprietors' income \$0.7 billion, while most of the rest of the losses were in the real estate industry. Net insur-

ance settlements for consumer durable goods raised personal current transfer receipts \$3.6 billion, and FEMA disaster assistance raised transfers \$0.3 billion.²

2. Insured losses are based primarily on state-level insurance industry estimates and estimates from the National Flood Insurance Program. Uninsured losses are based on insured losses and survey estimates of the proportion of households without insurance coverage. For more details about how BEA accounts for natural disasters in state personal income, see David G. Lenze, "State Personal Income: Third Quarter of 2005," SURVEY 86 (January 2006): 46-52.

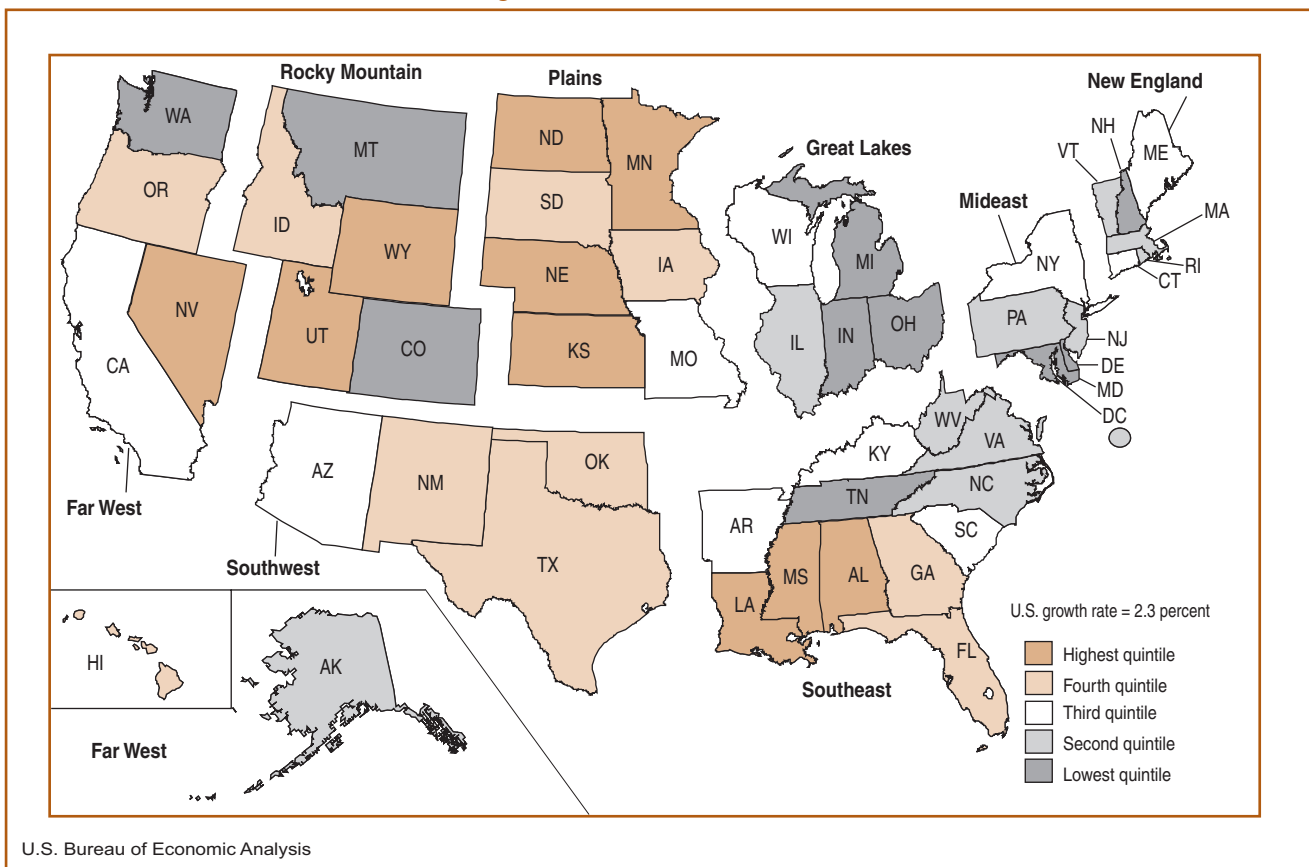

Table A. Special Adjustments to State Personal Income for the Fourth Quarter of 2005

[Billions of dollars, annual rate]

L Less than 0.05.

Chart 1. Personal Income: Percent Change in 2005:IV

The net effect of these adjustments raised Florida's personal income less than \$0.1 billion.³

Louisiana. Louisiana's personal income in the fourth quarter was adjusted for population dispersal to other states as a consequence of the hurricanes and flooding in the third quarter. BEA estimates that by the end of 2005, approximately 304,000 residents (repre-

senting 119,000 households) had not yet returned to the state after leaving due to Hurricane Katrina.⁴ This group represents about 7 percent of the state's pre-hurricane population. The transfers that they would have

3. The \$0.1 billion adjustment for interstate population dispersal is an adjustment for Hurricane Katrina, not Hurricane Wilma (table A).

4. The estimate of population dispersal from Louisiana is based on data in FEMA's *Current Location Report*. These data were adjusted for in-migration of evacuees from Mississippi and Alabama as well as for possible misreporting and the likely imminent return of some evacuees. The estimate was cross-checked with data from the *Current Population Survey*.

Alternative Measures of Household Income

Three of the most widely used measures of household income are BEA's measure of personal income, the Census Bureau's measure of money income, and the Internal Revenue Service's measure of adjusted gross income of individuals.¹

Personal income, in general, is a more comprehensive measure. For both the national and regional accounts, personal income is defined as the sum of wage and salary disbursements, supplements to wages and salaries, proprietors' income with inventory valuation and capital consumption adjustment, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and personal current transfer receipts, less contributions for government social insurance. These measures of personal income include the incomes of individuals, of nonprofit institutions that primarily serve individuals, of private noninsured welfare funds, of private trust funds, of the property income earned on life insurance and annuity reserves of life insurance carriers, and of noninsured pension plans.

Money income consists of income in cash and its equivalents that is received by individuals. It excludes, but personal income includes, employer contributions for employee pension and insurance funds, lump-sum payments except those received as part of earnings, certain in-kind personal current transfer receipts—such as Medicaid, Medicare, and food stamps—and imputed income.² Money income includes, but personal income excludes, personal contributions for government social insurance, income from government employee retirement plans and from private pensions and annuities, and income from regular interpersonal transfers, such as child support.

In addition, personal income at the national, state, and local area levels is presented annually on a per capita (or simple average per person) basis. Money income at the national level is pre-

sented annually both on a per capita basis and on a median household basis; state money income from the Current Population Survey is presented annually as two- and three-average medians.³ State personal income is not adjusted for inflation, but the national estimates of money income are available in inflation-adjusted dollars, using the consumer price index.⁴

Adjusted gross income (AGI) consists of the taxable income of individuals who filed a Federal income tax return. It includes, but personal income excludes, personal contributions for social insurance, gains and losses on the sale of assets, and income from government employee retirement plans and from private pensions and annuities. AGI excludes, but personal income includes, the income of the recipients of taxable incomes who, legally or illegally, did not file an individual income tax return. In particular, AGI excludes the income of many individuals with low incomes who are exempt from filing tax returns. Additionally, adjusted gross income excludes certain types of income that are not taxed—such as tax-exempt interest and nontaxable transfer payments, including Medicare, Medicaid, and welfare benefit payments—and it includes the taxable portion of social security benefit payments.

3. For local areas, the most recent estimates of money income, for 2003, are median household income estimates from the Small Area Income and Poverty Estimates.

4. At the national level, BEA also presents real per capita disposable personal income (DPI). (DPI is personal income less personal current taxes; real DPI is DPI divided by the implicit price deflator for personal consumption expenditures.) For the sources of the prices used for this deflator, see "Updated Summary NIPA Methodologies," Survey 85 (November 2005): 11–28.

Comparison of Alternative Per Capita Income Measures

(Dollars)

	Per capita income		
	2003	2004	2005
State personal income ¹	31,484	33,050	34,586
Money income ²	23,276	23,848	n.a.
Adjusted gross income ³	21,361	23,037	n.a.

n.a. Not available

1. Bureau of Economic Analysis, available at <www.bea.gov>.

2. Census Bureau, Current Population Survey, available at <www.census.gov>. Census calculates CPS per capita money income using the civilian noninstitutional population total as of March of the following year.

3. Internal Revenue Service (IRS), available at <www.irs.gov>. The IRS does not produce per capita adjusted gross income (AGI). The measures shown are derived by dividing aggregate IRS AGI (less deficit) by total population from the Census Bureau (also used by BEA in the calculation of state per capita personal income).

1. See also John Ruser, Adrienne Pilot, and Charles Nelson, "Alternative Measures of Household Income: BEA Personal Income, CPS Money Income, and Beyond," <www.bea.gov/bea/about/fesac/AlternativemeasuresHHIncomeFESAC121404.pdf>; the Census Bureau's *Income, Poverty, and Health Insurance Coverage in the United States: 2004*; the Internal Revenue Service's annual *Individual Income Tax Returns*; and Mark A. Ledbetter, "Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income: New Estimates for 2003 and Revised Estimates for 2002," SURVEY OF CURRENT BUSINESS 85 (November 2005): 30–35.

2. Imputations are added to personal income in both the national and regional measures so that a comprehensive account of total production and its distribution can be presented. For a description of these imputations, see *State Personal Income: 2004 Methodology* at <www.bea.gov/bea/regional/articles/spi2004/Complete_Methodology.pdf>.

Adrienne T. Pilot

received (\$1.6 billion) were removed from Louisiana and added to the states where they now reside.⁵ Texas gained the bulk of these transfers (\$0.7 billion). In addition, nonfarm proprietors' income was reduced by \$1.1 billion, and net rental income was lowered by \$34 million (6.9 percent). These negative adjustments were offset by \$2.7 billion in continuing FEMA disaster assistance to the victims of Hurricanes Katrina and Rita. Therefore, the net adjustment to Louisiana's fourth-quarter personal income was a reduction of less than \$0.1 billion.

Other states. Transfer receipts in other states were raised \$2.5 billion for FEMA disaster assistance and \$1.5 billion because of the dispersal of persons from Louisiana after the hurricanes. Texas gained the most (\$1.8 billion), followed by Mississippi (\$1.0 billion), Georgia (\$0.3 billion), and Alabama (\$0.2 billion).

Annual Estimates

U.S. per capita personal income grew 4.6 percent in 2005, compared with 5.0 percent in 2004. Growth rates in most states were tightly clustered around the national average; however, Louisiana's 9.1-percent decline and Washington's 1.1-percent growth were notably slower, while Wyoming's 7.3-percent increase was notably higher.

For states with the slowest growth, the common factor was property income (dividends, interest, and rent). Earnings accounted for Wyoming's conspicuously faster growth.

Property income plummeted in both Washington and Louisiana but for different reasons. The decline in Washington was a consequence of the special Microsoft dividend paid at the end of 2004. The decline in Louisiana (and in Mississippi) was a consequence of the hurricanes. Most of the uninsured housing destroyed in the disaster was recorded as a charge against rental income. Across the country, rental income net of expenses fell across the country as the hectic pace of home sales and mortgage refinancing increased mortgage costs.

Earnings

Nationally, net earnings growth accelerated slightly to 6.7 percent in 2005, from 6.4 percent in 2004. Professional services, health care, and construction contributed more than a third of the growth. Earnings typically accounts for the majority of personal income.

Net earnings grew fastest in Nevada (12.3 percent), Arizona (11.8 percent), and Florida (10.6 percent),

propelled by jobs created by influxes of new residents. In Wyoming, net earnings growth (10.5 percent) stemmed from higher earnings per job. Wyoming's per capita personal income has increased faster than in all other states in 2001–2005.

In the Great Lakes region, earnings grew 4.4 percent, the slowest growth of the eight BEA regions. The weakness reflects difficulties in the region's durable-goods manufacturing sector, especially motor vehicles and parts. Although durable-goods manufacturing is no longer declining in the Great Lakes region, it nevertheless grew much slower than the industry grew nationally in 2005. Construction, wholesale trade, finance, and state and local government contributed much less to growth in this region than they did nationally.

In contrast, the superior performance of the Southwest region (where earnings grew 8.6 percent, 2.0 percentage points more than the Nation) stemmed from its durable-goods manufacturing (particularly machinery and computers) and mining sectors.

Dividends, interest, and rent

Dividends, interest, and rent grew 2–3 percent in most regions in 2005. In the Far West, however, these components combined fell 1.6 percent because of the Microsoft dividend. In the Southeast, these components fell 4.2 percent because of the hurricanes.

Transfer receipts

Transfer receipts grew 6–7 percent in most regions. In the Southeast, they grew 9.4 percent because of the hurricanes.

Personal current taxes

Personal current taxes, which are deducted from personal income to obtain disposable personal income, increased 15.3 percent in 2005, while personal income

Gross State Product Update

BEA will release updated gross state product (GSP) estimates for 1963–1976 that are methodologically consistent with estimates for more recent years. These GSP estimates supplant experimental GSP estimates for these years that were released in 1988. The updated estimates are available for 75 Standard Industrial Classification (SIC) industries in current dollars for GSP, compensation, taxes on production and imports, and gross operating surplus. The new GSP estimates will be available on BEA's Web site, <www.bea.gov>, in the near future.

5. This temporary adjustment was necessary because BEA extrapolates transfers on the basis of existing trends in the absence of quarterly source data. When the source data become available, they will reflect the population loss.

increased only 5.6 percent. The disparity arises from several factors. First, taxes are measured on a payments basis except for withheld taxes (largely taxes on wages and salaries). Second, personal current taxes include taxes on capital gains, but capital gains are not included in personal income. Third, substantially higher taxable capital gains in 2004 led to higher tax payments in early 2005.

By state, personal current taxes increased most rapidly in Wyoming (27 percent) and increased least rapidly in Michigan (11 percent). They declined 12 percent in Louisiana.

Personal income growth rankings

The state personal income growth rankings reflect definite regional patterns (chart 2). The Great Lakes region was the weakest in 2005; most of the slowest growing states in the country are located there and in the adjacent Plains region. In contrast, the Rocky Mountain and Southwest regions comprise most of the fastest growing states.

Per capita income rankings

Connecticut led the Nation with a per capita personal income of \$47,819, 38 percent above the national aver-

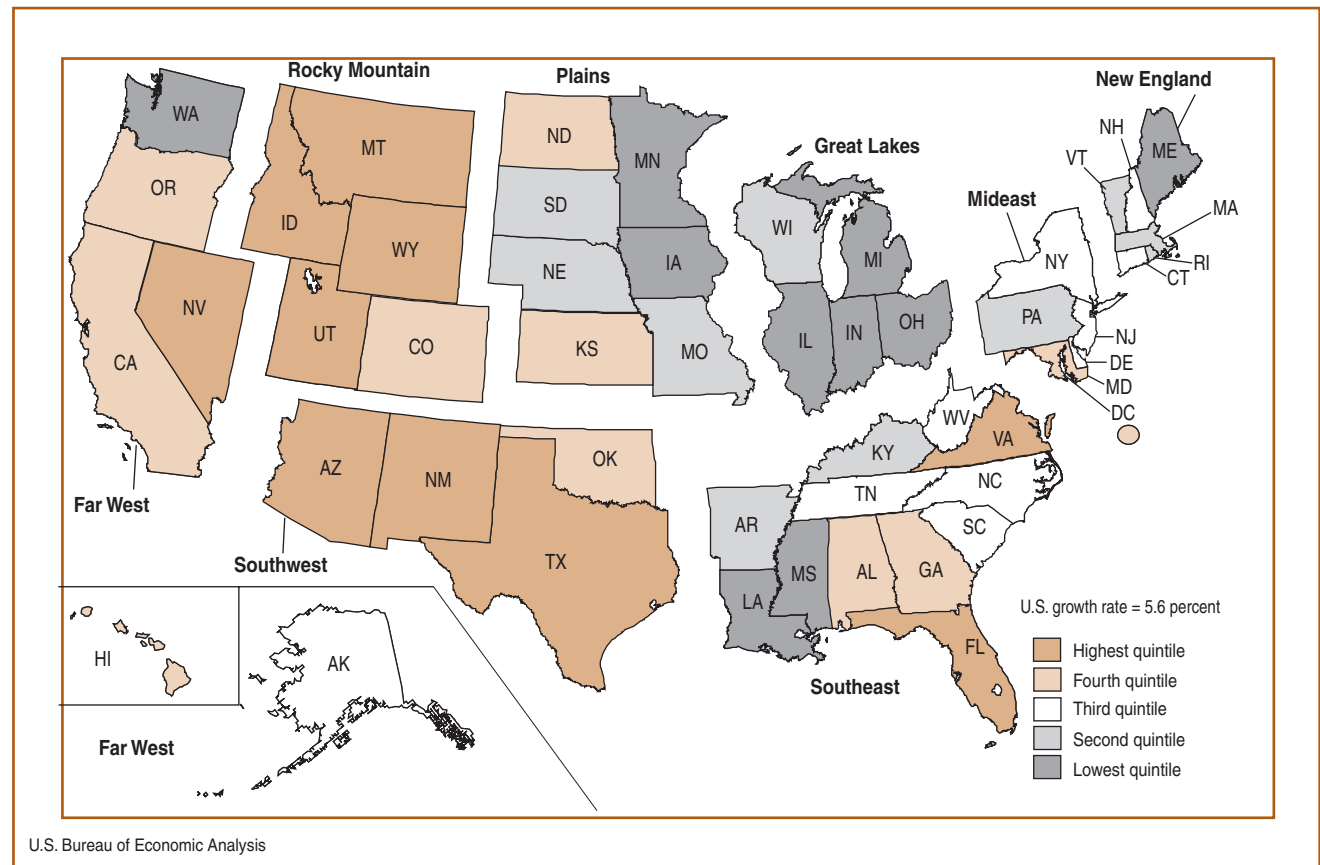

age. The 10 states with the highest per capita income in 2005 were all ranked in the top 10 in 2004, although some of the states traded places.

Louisiana's per capita personal income of \$24,820, 28 percent below the national average, was the least of all states. In 2004, it ranked 42nd. The bottom 10 states, with the exception of Alabama, were all ranked

Acknowledgments

The quarterly and preliminary annual estimates of state personal income were prepared by Suet N. Boudhraa, Daniel R. Corrin, Carrie L. Litkowski, and Matthew A. von Kerczek, under the supervision of James M. Zavrel, Chief of the Regional Income Branch. The preliminary annual estimates of disposable personal income were prepared by Ann E. Dunbar. The tables were prepared by Giselle Cubillos-Moraga, H Steven Dolan, Gary V. Kennedy, and Alison Skinner, under the supervision of Kathy A. Albetski, Chief of the Regional Economic Information System Branch. Robert L. Brown, Chief of the Regional Economic Measurement Division, provided general guidance.

Chart 2. Personal Income: Percent Change 2004–2005

in the bottom 10 in 2004. Alabama was 11th from last, and Montana was 10th from last in 2004.

Large historical declines

In 2005, the decline in real per capita personal income in Louisiana—\$2,921—was the largest ever recorded for any state (table B).⁶ Other historically large declines occurred in North and South Dakota, Alaska, and Wyoming. The declines in the Dakotas in 1949, 1974, 1980, and 1988 can be attributed to declines in farm income; the declines in Alaska can be variously attributed to the end of a major construction project (1978), collapse of commodity prices (1987), and unusually high population growth (1952). The decline in Wyoming (1983) can be attributed to recession.

On a percentage basis, the 11.6-percent decline in real per capita income in Louisiana has been exceeded many times, most recently by the 13.6-percent decline in North Dakota in 1980 and by a 12.9-percent decline in Louisiana in 1946. All but one of the top 10 percentage declines were during the Great Depression (table C). The largest decline ever was a 30.3-percent decline in North Dakota in 1931.

Annual adjustments for hurricanes

Hurricane adjustments to third-quarter personal income were substantially higher than originally reported primarily because of sharply higher estimates of flood damage in New Orleans. Table D displays the new third-quarter estimates combined with fourth-quarter estimates for Hurricane Wilma.

6. Personal income was deflated by the national price index for personal consumption expenditures.

**Table B. Ten Largest Dollar Declines
in Real Per Capita Personal Income, 1930–2005**

p Preliminary.
r Revised.

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census.

2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region, 2000–2005

Area name	Disposable personal income							Per capita disposable personal income ¹							Rank in U.S.
	[Millions of dollars]						Percent change ²	[Dollars]

r Revised.
p Preliminary.
1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census.
2. Percent change was calculated from unrounded data.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 4. Personal Income by Major Source and

[Millions of
