OET – Engineering and Technical Support

# OET's Mission

Manage the spectrum and provide technical leadership to create new opportunities for innovation, economic growth, and provide consumers new choices; and to facilitate the Commission homeland security initiatives.

# OET Accomplishments for 2004

- ◆ Broadband over Power Line
- ◆ Ultra-Wide Band
- ◆ U-NII (5 GHz Wi-Fi) - 255 MHz new unlicensed spectrum
- ◆ Unlicensed Spectrum - 3650-3700 MHz
- ◆ White Spaces - Unused TV Channels
- ◆ 70/80/90 GHz
- ◆ Network Outage Reporting

# OET Accomplishments for 2004

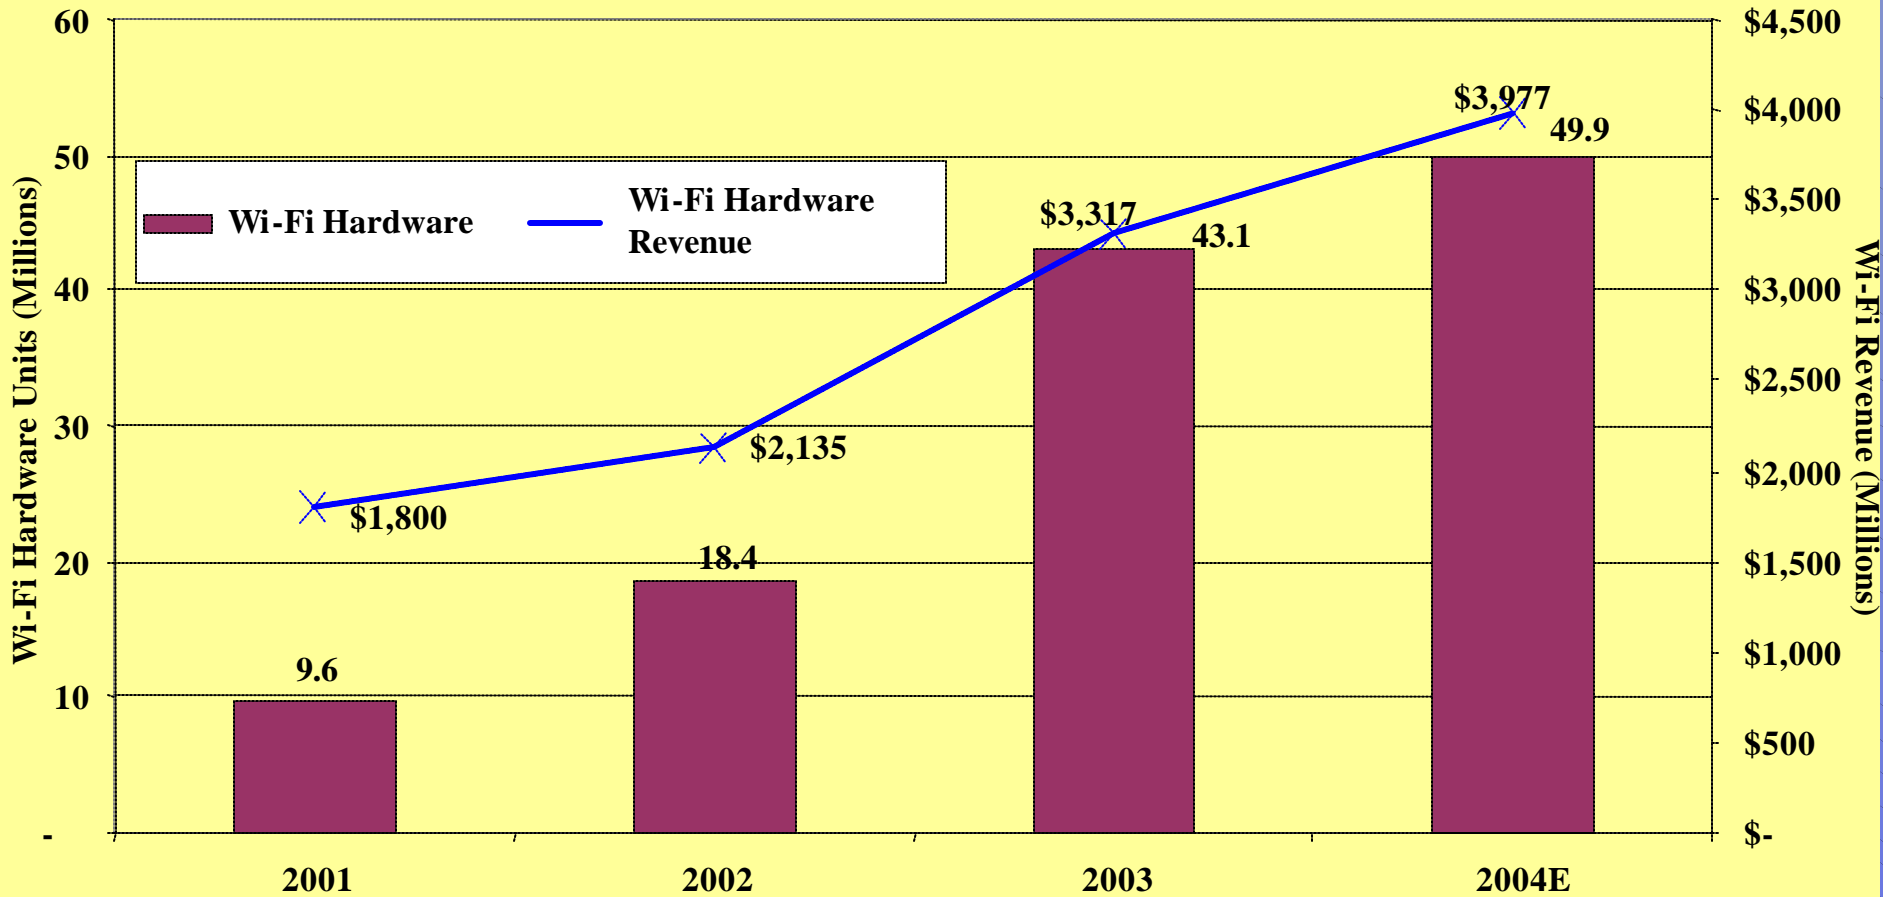

- ◆ SPTF Implementation
  - Cognitive Radio
  - Interference Temperature
- ◆ Advanced Wireless Services
  - Allocations for G-Block
  - Allocations for H-Block
  - Government Relocation
- ◆ Part 15
  - Radio Frequency Identification (RFID)
  - Smart Antennas
- ◆ WRC Implementation

# Consumer Choices for Broadband Services

- ◆ BPL will provide the “Third” broadband pipe into the home
- ◆ 5 GHz will provide additional spectrum in both rural and urban areas for unlicensed broadband services like WiFi
- ◆ AWS (3G) will provide competitive mobile broadband services

# Unlicensed Policies Facilitate Economic Growth

## Worldwide Wi-Fi Revenue and Sales

Sources: In-Stat/MDR & OSP, December 2004

# Homeland Security Initiatives

- ◆ CALEA
  - Coordinate Agency CALEA Activities
- ◆ UWB
  - Ground Penetrating Radar
  - Through Wall Imaging
- ◆ Network Outage Reporting
- ◆ NRIC
  - Commission's post 9/11 Initiative
  - Network Reliability Concerns
  - Best Practices
- ◆ 800 MHz Public Safety Interference
  - Interference Analysis

# Modernize the FCC and OET Technical Capabilities

- ◆ State-of-the-Art  
Test Capabilities
- ◆ Theoretical  
Analysis
- ◆ Empirical Studies

# Modernizing FCC Technical Capabilities

## Anechoic Chamber

State-of-the-Art Test Facility

# Test Capability Support the Growth of Cellular Technology and Services

Cellular Lab

SAR RF Safety Lab

# OET Computer Modeling Supporting Development of New Technologies

## MATLAB Model for Interference to a Fixed Satellite Service Earth-Station from UWB Devices

# OET Excellence in Engineering Accomplishments

- ◆ In-house Tutorials:
  - Spectrum 101
  - Basic Wireless/Wireline Engineering for Attorneys
- ◆ Contracted professional engineering courses:
  - Digital RF, Wi-Fi, OFDM, CDMA, ATSC Digital VSB
- ◆ Introduction to communications technology for non-engineers
- ◆ Industry tutorials on a variety of technical topics
- ◆ Graduate Degree Program

# OET Backlog Reduction

# OET Goals for 2005

- ◆ Facilitate the Growth and Development of Broadband Services and Technologies
  - Identify and understand emerging technologies
  - Review and modify as appropriate rules for unlicensed broadband services (UWB, WiFi, WiMax, BPL, etc.)
  - Provide rule making items in the 3650-3700 MHz proceeding and the TV "White-spaces" proceeding
- ◆ Facilitate Competition Services
  - Recognize and reduce technical regulatory barriers
  - Provide rule makings items in the cognitive radio proceeding and any necessary steps to complete the AWS (3G) allocation proceeding

# OET Goals for 2005

## ◆ Homeland Security Policies

- Facilitate Improvements to Network Security, Reliability and Integrity
- Work with NRIC to develop "Best Practices"
- Provide rulemaking items in the CALEA proceeding and in the Network Outage Reporting proceeding

## ◆ Modernizing the FCC

- Continue to upgrade our facilities
- Improve the speed of disposal
