

UNIVERSAL SERVICE
MONITORING REPORT
CC DOCKET NO. 98-202
OCTOBER 2001

(Data Received Through April 2001)

Prepared by Federal and State Staff for the
Federal-State Joint Board on Universal Service in
CC Docket No. 96-45

This report is available for reference in the FCC's Reference Information Center, Courtyard Level, 445 12th Street SW, Washington, DC 20554. Call Qualex International at (202) 863-2893 to purchase a copy. The report can also be downloaded from the **FCC-State Link** internet site at <www.fcc.gov/ccb/stats>. Names for print image files: mrs01-0.pdf, mrs01-1.pdf, ... , mrs01-11.pdf for the introduction and each section separately. Names for compressed files in word processor (Word 97) and spreadsheet (Excel 97 or Lotus 123 .wk4) formats: mrs01-0.zip, mrs01-1.zip, ... , mrs01-11.zip.

Table of Contents

Index of Tables and Charts	2 to 4
Introduction and Summary	5 to 7
Service List	8 to 11
1. Industry Revenues and Contributions	1-1 to 1-7
2. Low-Income Support	2-1 to 2-73
3. High-Cost Support	3-1 to 3-332
4. Schools and Libraries Support	4-1 to 4-15
5. Rural Health Care Support	5-1 to 5-7
6. Subscribership and Penetration	6-1 to 6-83
7. Rates and Price Indices	7-1 to 7-30
8. Network Usage and Growth	8-1 to 8-140
9. Quality of Service	9-1 to 9-15
10. Infrastructure	10-1 to 10-21
11. Revenues, Expenses and Investment.....	11-1 to 11-54

Universal Service Monitoring Report

CC Docket No. 98-202

October 2001

Introduction and Summary

This is the fifth report in a series of reports prepared by federal and state staff members for the Federal-State Joint Board on Universal Service in CC Docket No. 96-45 (Universal Service Joint Board). This report is based on information available to us as of April 30, 2001. These reports contain information designed to monitor the impact of various universal service support mechanisms, and the methods used to finance them. These mechanisms were adopted by the Federal Communications Commission (Commission), based on recommendations from the Universal Service Joint Board. These reports are part of a monitoring program created by the Commission in 1997¹ to replace a similar program in CC Docket No. 87-339 that resulted in a series of nineteen Monitoring Reports. The current program incorporates most of the information that was collected under the previous program, and also new materials from the reports of the administrator of the universal service support mechanisms, the Universal Service Administrative Company (USAC). To enhance our monitoring ability, we have created an open docket², which allows data, materials, comments, and studies to be submitted by any interested party at any time.

The monitoring program has proven to be valuable, not only as a report on the effects of the Commission's regulatory policies, but also as a complete census of all incumbent local exchange carriers. Because smaller carriers generally are exempt from most Commission reporting requirements, the Monitoring Report incorporates data from several sources, including the National Exchange Carrier Association (NECA) and USAC. NECA, at the direction of the Commission, collects information in order to administer the access charge pools and to provide information to USAC to help administer the Universal Service Fund. USAC also collects information from all eligible carriers to administer the universal service support mechanisms. The Monitoring Report, therefore, contains the only available comprehensive data on all incumbent local exchange carriers, containing data on such matters as the number of telephone lines, calling volumes, and certain types of costs.

This report presents data for the eleven subject categories selected for monitoring. The first section provides information on the contributions to the universal service support mechanisms and industry revenues, on which those contributions are based. The next four sections provide information on the various support mechanisms: low-income support; high-cost support; schools and libraries support; and rural health care support. The remaining six sections provide information on matters that might be affected by the support mechanisms: subscribership and penetration; rates and price indices; network usage and growth; quality of service; infrastructure; and revenues, expenses, and investment.

Because the Monitoring Report is published twice a year and some of the information published is filed only once a year, not all tables are published in every issue. We recommend that users keep the two latest issues to be certain they have all the latest information. In this report, we only include tables

1 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Report and Order*, FCC 97-157, para. 869 (released May 8, 1997).

2 CC Docket No. 98-202.

for which we have new information, except for a few summary tables. The following are highlights of some of the material in this report. Section 1 provides an update on industry revenues by type of carrier, and the universal service program requirements and fund factors. Section 2 includes the latest data on the Lifeline and LinkUp America programs. Section 3 includes the most recent projected payments for all of the high-cost support programs, based on the quarterly reports from USAC. It also includes information from the latest filing by NECA for the high-cost loop fund. Section 4 includes updated data on the schools and libraries support. Section 5 includes updated data on the rural health care support. Section 6 includes the most recent Census data on subscribership from the Current Population Survey. It also includes data on telephone penetration by income by state and a discussion of the impact of Lifeline programs on penetration. Section 7 includes updated Consumer Price Index and Producer Price Index data and other updated rate information. Section 8 includes the latest NECA data on access minutes, dial equipment minutes, and separations factors. Section 9 includes updated data on the quality of service from the Commission's Automated Reporting Management Information System (ARMIS) reports. Section 10 includes updated data on infrastructure from the ARMIS reports. Section 11 includes the latest information on revenues, expenses, and investment from the ARMIS reports.

This entire report is available electronically through the **FCC-State Link** Internet site, which can be reached at <www.fcc.gov/ccb/stats>. It is available in both page image (.pdf) format and in a compressed (.zip) format, which, when unzipped yields word processing and spreadsheet files. In addition, information received well in advance of the next Monitoring Report will be made available on an interim basis in separate staff reports or in raw data files (such as most NECA filings used in the Monitoring Report) on the **FCC-State Link** internet site. In addition, the ARMIS data are available on the ARMIS Internet site, which can be reached at <www.fcc.gov/ccb/armis/db/>.

For ease of public reference, parties submitting materials for this docket should provide a duplicate copy to the FCC's Reference Information Center,³ where copies of all materials filed in the docket are available for public reference.

3 Courtyard Level, 445 12th Street SW, Washington, DC 20554.

This report has been prepared by the federal staff listed below and reviewed by the state staff listed below. These staff members can be contacted for further information:

General Information: Alexander Belinfante (Federal) (202) 418-0944
Peyton Wynns (Federal) (202) 418-0942
Peter Pescosolido (Connecticut) (860) 827-2616
Jeff Pursley (Nebraska) (402) 471-3101
Larry Stevens (Iowa) (515) 281-4725

Industry Revenues and Contributions: Jim Lande (Federal) (202) 418-0948
Craig Stroup (Federal) (202) 418-0989
Greg Fogleman (Florida) (850) 413-6574

Low-Income Support: Laurence Povich (Federal) (202) 418-0953
Suzanne McCrary (Federal) (202) 418-0941
Philip McClelland (Pennsylvania) (717) 783-5048
Charles Bolle (Nevada) (775) 687-6070

High-Cost Support: Alexander Belinfante (Federal) (202) 418-0944
Tom Wilson (Washington) no longer on joint board staff

Schools and Libraries Support: Craig Stroup (Federal) (202) 418-0989
Susan Stevens Miller (Maryland) no longer on joint board staff

Rural Health Care Support: Craig Stroup (Federal) (202) 418-0989
Peter Bluhm (Vermont) (802) 828-2358

Subscribership and Penetration: Alexander Belinfante (Federal) (202) 418-0944
Earl Poucher (Florida) (850) 487-8242

Rates and Price Indices: Keith Brown (Federal) (202) 418-2078
Joel Shifman (Maine) (207) 287-1381

Network Usage and Growth: Keith Brown (Federal) (202) 418-2078
Mary Newmeyer (Alabama) (334) 242-2968

Quality of Service: Jonathan Kraushaar (Federal) (202) 418-0947
Carl Johnson (New York) (518) 486-2832

Infrastructure: Jonathan Kraushaar (Federal) (202) 418-0947
Lori Kenyon (Alaska) (907) 263-2123

Revenues, Expenses, and Investment: Katie Rangos (Federal) (202) 418-0954
Barbara Meisenheimer (Missouri) (573) 751-5567

SERVICE LIST

All items filed in CC Docket No. 98-202 must be filed with the Secretary, Federal Communications Commission, 445 12th Street, SW, Room TW-B204, Washington, D.C. 20554, and the following Commissioners and staff members (e-mail addresses of staff members follow their mailing addresses):

DOCKET NO. 96-45 JOINT BOARD MEMBERS

Commissioner Kathleen Q. Abernathy
Federal Communications Commission
445 12th Street SW, Room 8-A204
Washington, DC 20554

Commissioner Michael Copps
Federal Communications Commission

1. Industry Revenues and Contributions

This section provides a general overview of the revenues of the U.S. telecommunications industry, and the contributions to the universal service support mechanisms that are based on these revenues. The information for 2000 comes from worksheets containing first-half 2000 revenue data that carriers filed with the administrator of the universal service support mechanisms. By October 2000, the universal service database contained first-half 2000 data for 2,593 contributing service providers. The data represent all carriers, although revenue data were estimated for some contributors due to late filings or inadequate filings and also for carriers that were not required to file a universal service worksheet. Over 1,000 carriers, however, were exempted from universal service filing requirements because their potential contributions to the universal service support mechanisms were expected to be *de minimis* - that is, their contribution for the year was expected to be less than \$10,000. Many of these *de minimis* carriers filed FCC Form 499-S and their data is included in Table 1.1.

Table 1.1 shows carrier's carrier revenues and end-user revenues for 1999 and first-half 2000 for six broad classes of carriers.

Universal service requirements include several mechanisms that help ensure that all Americans have access to affordable telecommunications service. In section 254(d) of the Telecommunications Act of 1996,¹ Congress mandated that "[e]very telecommunications carrier that provides interstate telecommunications services shall contribute, on an equitable and nondiscriminatory basis, to the specific, predictable, and sufficient mechanisms established by the Commission to preserve and advance universal service." The Commission adopted funding mechanisms in a *Report and Order*.² The Commission subsequently selected the Universal Service Administrative Company (USAC) as the administrator. Carriers first filed FCC Form 457 (Universal Service Worksheets) on September 1, 1997, to report revenues earned in the first half of 1997. Starting with the September 1999 filing, carriers were instructed to file their revenue information on FCC Form 499-S (Telecommunications Reporting Worksheets, due each September), and FCC Form 499-A (Telecommunications Reporting Worksheets, due each April). These forms replaced the FCC Form 457 (Universal Service Worksheet). The FCC Form 499-A is similar to the Form 457. Beginning in May 2001, carriers began to file their revenue data quarterly, and are still required to file their annual revenue data on Form 499-A. Form 499-S, which is no longer in use, contained significantly less revenue information than Form 499-A.

1 Pub. L. No. 104-104, 110 Stat. 56 *codified* at 47 U.S.C. §§ 151 *et seq.*

2 *See Federal-State Joint Board on Universal Service, Report and Order*, CC Docket No. 96-45, 12 FCC Rcd 8776 (1997) (subsequent history omitted).

Revenues Data

Almost all telecommunications carriers are considered to be interstate service providers. Local telephone companies are classified as interstate service providers because they provide interstate access services. Similarly, competitive access providers, pay telephone operators, and cellular telephone companies derive revenues from providing access to interstate services and accordingly file worksheets. Virtually all pay telephone providers, interexchange carriers (IXCs), operator service providers (OSPs), and toll resellers provide interstate services. Special mobile radio (SMR) and private paging providers offer dispatch, paging, and some telephone services. At one time, SMRs were not regulated as carriers and did not have to contribute to the provision of telecommunications relay service (TRS). SMRs were first required to file TRS Worksheets in 1996. Private carriers are subject to universal service support mechanism contribution requirements but not to TRS contribution requirements.

Each legal entity that provides interstate telecommunications service must file a separate FCC Form 499. Each filer is required to report total and interstate revenues in two broad categories: service provided to other universal service contributors for resale (carrier's carrier); and, service to *de minimis* carriers and end users (end user). In the April version of the form, carriers must provide further breakdowns of local, wireless, and toll services as well as breakdowns for intrastate, interstate, and international service. Interstate and international revenues are combined in Table 1.1. One category of end-user telecommunications revenues -- toll calls that both originate and terminate outside of the United States, primarily call-back and World Direct type service -- is excluded from universal service contribution bases.

The Telecommunications Reporting Worksheets require each filer to categorize itself using one of the following categories:³

- Competitive Access Provider (CAP) or Competitive Local Exchange Carrier (CLEC)
- Cellular, Personal Communications Service (PCS) and Specialized Mobile Radio (SMR) Wireless Telephony Service Provider
- Incumbent Local Exchange Carrier (ILEC)
- Interexchange Carrier (IXC)
- Local Reseller
- Operator Service Provider (OSP)
- Other Local
- Other Mobile Service Carrier
- Other Toll Service Provider
- Paging and Messaging
- Pay Telephone Provider
- Prepaid Calling Card Provider
- Private Service Provider

3 For detailed definitions of the categories, see the instructions to the Telecommunications Reporting Worksheet, Form 499-A, which can be accessed at <www.fcc.gov/formpage.html>.

- Satellite Service Provider
- Shared Tenant Service Provider
- Special Mobile Radio - Dispatch
- Toll Reseller
- Wireless Data Service Provider

Table 1.1 summarizes total industry revenues and shows detail for six broad groups of carriers. Carriers reported \$26.3 billion of carrier's carrier revenues and \$109.4 billion of end-user revenues for the first half of 2000. \$40.0 billion of the end-user revenues were identified as interstate, which includes domestic interstate calls as well as international calls, but excludes calls that both originate and terminate in foreign points.

Carriers were instructed to report the amounts actually billed to customers. This means that carriers should report revenues net of discounts, but without making any adjustments to reflect uncollectible revenues or international settlement payments. Most filers should be able to report revenues in this manner using information contained in their corporate books of account. Some filers, however, have no business or regulatory requirements to record intrastate revenues separately from interstate revenues or to use the detailed revenue categories contained in the worksheets. Therefore, breakdowns are likely to be less accurate than industry totals.

The universal service and TRS rules prohibit the fund administrators from releasing information contained in the worksheets. Worksheet revenue data for individual carriers are not available to the public.

Program Requirements and Contribution Factors

Carriers make payments into the universal service mechanism based on their interstate end-user revenues. Carriers report their revenue data to the Universal Service Administrator, which tabulates the data, and reports it to the Commission. The Commission reviews program requirements and revenue data, and then determines the appropriate contribution factor. The Commission's Common Carrier Bureau then releases a public notice stating the proposed contribution factor for the upcoming quarter. If, after 14 days, the Commission takes no action regarding the proposed contribution factor, the factor becomes final.

On March 9, 2001, the Commission adopted a plan that modified the methodology used to determine payments that carriers make to the federal universal support mechanisms.⁴ Before the change, carriers filed revenue information twice a year. Carriers filed first half-year revenues on September 1, and then filed whole-year revenues the following April 2. The first half-year revenues were used to determine the contribution factor for the first two quarters of the following year. The

4 See *Federal-State Joint Board on Universal Service, Petition for Reconsideration filed by AT&T*, CC Docket No. 96-45, Report and Order and Order on Reconsideration, FCC 01-85 (rel. March 14, 2001).

second half-year revenues (which equaled whole-year revenues minus the first half-year revenues) were used to determine the contribution factor for the last two quarters of the following year.

The revised methodology requires carriers to file revenue information quarterly rather than semiannually. The Commission sets the contribution factors based on the quarterly revenue information. Contribution factors are based on revenue information from the quarter that was half a year prior to the upcoming quarter. Accordingly, the interval between the accrual of revenues and assessment of contributions based on those revenues is approximately 6 months.⁵ Prior to the adoption of the revised methodology, contributions were based on revenues from the prior year, resulting in an average interval of one year. Thus, the new methodology cut in half the interval between accrual of revenues and assessment of contributions based on those revenues. In addition to the quarterly revenue filings, carriers will also file whole-year revenue information on April 1 of each year. This filing will be used as an annual true-up.⁶

In order to accommodate the change in methodology, carriers were directed to file their calendar year 2000 revenue information as scheduled on April 2, 2001, and were then required to file their first quarter 2001 revenue information on May 11, 2001. Based on that information, the Commission set the contribution factor for the third quarter of 2001. In the future, revenue data for the first through fourth quarters of each year are due the following May 1, August 1, November 1, and February 1, respectively.

Tables 1.2a and 1.2b show the program funding requirements for 2000 and the first half of 2001 respectively. For each program and for each quarter, the tables list program demand, administrative costs, interest income, and periodic true-ups. The tables also show the revenue base and contribution factors for each quarter. If all carriers had provided correct revenue data on the filing dates, the end-user revenue totals would be the same for the first two and last two quarters of the year. The revenue totals change over time, however, because of late filings and corrections. The Commission reduces the amounts in the contribution bases by 1% to reflect the fact that some contribution assessments may prove uncollectable. As mentioned above, the first two contribution factors in 2001 were based on first-half revenues of the year 2000, but future contribution factors will be based on revenues filed two quarters prior.

5 For example, the second quarter revenues will be used to calculate the fourth quarter contribution factor, and so on.

6 True-ups enable carriers to correct their revenue filings, if necessary.

2. Low-Income Support

In 1984, the Commission, in conjunction with the states and local telephone companies, established a Lifeline program designed to promote universal service by providing low-income individuals with discounts on the monthly cost of telephone service,¹ and it expanded that program in 1985.² In 1987, the Commission adopted LinkUp America, designed to help low-income households pay the initial costs of commencing service.³ In the Telecommunications Act of 1996 (1996 Act),⁴ Congress did not direct the Commission to take any particular actions on Lifeline and LinkUp,⁵ but the Federal-State Joint Board created by the 1996 Act recommended expanding Lifeline and LinkUp rules.

The May 1997 Universal Service Order adopted expanded rules.⁶ In June 2000, the Commission further expanded the Lifeline and LinkUp programs to address the particularly dire needs of those living on tribal lands.⁷

7 *Federal-State Joint Board on Universal Service; Promoting Deployment and Subscribership in Unserved and Underserved Areas, Including Tribal and Insular Areas*, Twelfth Report and Order and Memorandum Opinion and Order, and Further Notice of

The LinkUp America program, which supports affordable connection to the network, has added 10.6 million telephone subscribers since 1987. In 2000, an estimated 6.2 million subscribers paid reduced local rates under the Lifeline program.

The Commission's rules are designed to satisfy the 1996 Act's mandates that rates be "affordable" and access should be provided to "low-income consumers" in all regions of the nation. The rules also make the contribution and distribution of low-income support competitively and technologically neutral by requiring equitable and nondiscriminatory contributions from all providers of interstate telecommunications services, and by allowing all eligible telecommunications carriers to receive support for offering Lifeline and LinkUp service.⁸

Eligibility for Lifeline and LinkUp

In states that provide state Lifeline support, Lifeline and LinkUp are available to all subscribers who meet those state standards. Although states have some latitude in selecting means tests, state commissions must establish narrowly targeted qualification criteria that are based solely on income or factors directly related to income for its low-income residents to be eligible for Lifeline and LinkUp. In addition, a state with eligible residents of tribal lands must ensure that its qualification criteria are reasonably designed to apply to eligible residents of tribal lands within the state.⁹ To receive Lifeline and LinkUp in a state that does not mandate state Lifeline support, consumers must certify that they participate in one of the following five federal programs: Medicaid, food stamps, Supplemental Security Income (SSI), federal public housing assistance, or the Low-Income Home Energy Assistance Program (LIHEAP).¹⁰ In such states, carriers must obtain signed statements from the consumer certifying that he or she receives benefits from one of these programs, identifying the particular program and agreeing to notify the carrier if he or she ceases to participate in the program or programs.¹¹

Eligible subscribers living on tribal lands qualify to receive federal Lifeline support if: (1) they qualify under state criteria in a state that provides Lifeline support; (2) they certify that they receive benefits from one of the five federal programs listed above; or (3) they participate in one of the following additional federal assistance programs: Bureau of Indian Affairs (BIA) general assistance, Tribally administered Temporary Assistance for Needy Families (TANF), National School Lunch Program's free lunch program, or Head Start (meeting the income qualifying standard).¹²

12 47 C.F.R. § 54.409(a)-(c).

Lifeline Support

Under the Commission's rules, there are four tiers of federal Lifeline support. The first tier represents a waiver of the federal subscriber line charge, which may range from \$3.50 to \$4.35 per month.¹³ All eligible subscribers receive first tier support. Second tier support is a \$1.75 per month reduction in the basic local rate, and it is available if all relevant non-federal regulatory authorities approve such a reduction.¹⁴ (All fifty states have approved.)

The third tier of federal support is based on the amount of additional state support mandated by the relevant state or otherwise provided by carriers. Federal support is available to match one half of the non-federal support provided, up to a maximum of \$1.75 in federal support, assuming that the carrier has all necessary approvals to pass on the full amount of this total support in discounts to subscribers.¹⁵

Eligible subscribers living on tribal lands also qualify to receive a fourth tier of Lifeline support if they meet the eligibility standards described above. Tier four support provides up to an additional \$25 per month towards reducing basic local service rates. This enhanced support should bring basic monthly rates down to \$1 for most Lifeline customers on tribal lands.

LinkUp Support

The Commission's LinkUp program provides qualified low-income individuals with a federally-financed 50% discount (up to a maximum \$30 discount) on initial connection charges.¹⁶ In addition, these subscribers can choose to schedule deferred payments of up to \$200 over a one-year period, with the customary interest charges paid by federal support.¹⁷

In addition, eligible residents of tribal lands can receive support to fully cover any charges between \$60 and \$130, representing up to a maximum of \$100 in discounts on initial connection charges of \$130 or more.¹⁸

18 47 C.F.R. § 54.411(a)(3).

Services

Basic service must include, at a minimum: single-party service, voice grade access to the public switched telephone network, Dual Tone Multifrequency signaling or its functional digital equivalent, access to emergency services, access to operator services, access to interexchange service, access to directory assistance, and toll limitation. The federal program compensates eligible telecommunications carriers for toll-limitation based on the carrier's incremental cost of providing toll-limitation services.¹⁹

Advertising

Carriers offering Lifeline and LinkUp are also required to publicize the availability of those programs "in a manner reasonably designed to reach those most likely to qualify for support."²⁰

Support Mechanism

The federal portion of the program is funded by the federal universal service support mechanisms, which include contributions from providers of interstate and international telecommunications, including payphone aggregators, and private network operators that offer service to others for a fee on a non-common-carrier basis. These carriers and service providers may pass on contribution expenses to their customers.

The FCC monitors subscriber participation and telephone usage to determine program benefits and costs.²¹ Historical tables for subscribership and carrier payments by state can be downloaded from the Monitoring Reports section of the **FCC-State Link** web site, <www.fcc.gov/ccb/stats>.

Table 2.1 reports Lifeline monthly support by state or jurisdiction as of April 2001. The table shows both federal and state support, and indicates the additional contribution from the federal program to reduce local rates where states have authorized statewide or carrier specific intrastate local rate reductions. Table 2.1 indicates both the federal and state combined "minimum" local rate reduction. This table does not reflect changes in support that resulted from the implementation of the CALLS order, which took effect in July 2000.²²

21 *1997 Universal Service Order*, 12 FCC Rcd 8776, 9218 at para. 869; *See Common Carrier Bureau Seeks Comment on Program to Monitor Impacts of Universal Service Support Mechanisms*, Public Notice, CC Docket No. 96-45, DA 98-580, IAD File No. 98-101 (rel. Apr. 24, 1998).

22 *Access Charge Reform, Price Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance Users, Federal-State Joint Board on Universal Service*, Sixth Report and Order in CC Docket Nos. 96-262 and 94-1, Report and Order in CC Docket No. 99-249, Eleventh Report and Order in CC Docket No. 96-45, FCC 00-193, 15 FCC Rcd

Table 2.2 reports Low-Income support, by state or jurisdiction, for Lifeline and LinkUp payments between January 1998 and December 2000. Total carrier payments data include local rate reductions for the presubscribed interexchange carrier charges (PICC), and the carrier's incremental cost of providing toll-limitation services (TLS) in each state or jurisdiction.

Table 2.3 reports total Lifeline and LinkUp payments in 2000, for state or jurisdiction at the study area level. Local rate reductions for the PICC, and the carrier's incremental cost of providing TLS are reported for 2000 by carrier USAC ID and Serving Area code identification. The serving area codes identify where more than one carrier provides Lifeline and LinkUp assistance in the study area. American Indian and Native American tribal data are also reported.

Table 2.4 provides Universal Service Administrative Company (USAC) quarterly support estimates for the Federal universal service programs in 2001. The low-income support components include: Lifeline Assistance; LinkUp; Incremental Toll Limitation; PICC Reimbursement; Prior Period Adjustments and Administrative Expenses.

Table 2.5 reports annual historical Lifeline subscribership data by state or jurisdiction for years 1989 through 2000. Historical data from the inception of the program in 1985 through 1988 may be found on the Monitoring Reports section of the **FCC-State Link** web site, <www.fcc.gov/ccb/stats>.

Tables 2.6, 2.7, 2.9, and 2.10 explain National Exchange Carrier Association (NECA) and USAC grand totals. For earlier years, the data represents actual amounts reported by local exchange carriers. These payments are final and not subject to further adjustment. For the latest years, payments are subject to change, and reflect the settlements adjustment periods.

Table 2.6 reports annual historical Lifeline payments to carriers in each state or jurisdiction and shows total reimbursements to each state or jurisdiction. The report provides Lifeline support totals for payments made to subscribers through local rate discounts. The payments shown in these tables include TLS and PICC data; however, these tables do not include state or local rate contributions.

Table 2.7 reports historical Lifeline support payments by study area for the years 1990 to 2000. Historical data for years 1984 to 1988 may be found in the Monitoring Reports section of the FCC's web site mentioned above. Lifeline support payments between 1984 and 1995 reflect state data where states and carriers offered local rate discounts to low income households.

Table 2.8 reports historical subscriber participation in the LinkUp program. The subscribership data monitors annual state connection assistance statistics for 1989 through 2000. LinkUp program participation was first certified in 1987. Historical data for 1987 and 1988 is available in the Monitoring Reports section of the FCC's web site.

12,962 (2000), *aff'd in part, reversed in part, and remanded in part, Texas Office of Public Utility Counsel et al. v. FCC*, No. 00-60434 (5th Cir., Sept. 10, 2001).

Table 2.9 reports historical payments to carriers participating in the LinkUp program, and reflects reimbursements to carriers in each state. Historical time-series data provide a total of payments made to carriers as a result of rate discounts passed on to subscribers provided by the LinkUp connection assistance programs. The payments shown in these tables (1989-2000) do not include state or local rate contributions. Historical data for 1987 and 1988 is available in the Monitoring Reports section of the FCC's web site.

Table 2.10 reports annual historical data for the LinkUp connection assistance payments by study area to carriers in each state or jurisdiction. The LinkUp program includes connection discounts reflected in the reimbursements to local carriers. American Indian and Native American tribal data are also reported.

Table 2.11 shows, by state for 2000, the total amount of funding disbursements, the estimated contributions towards all low-income support, and the net revenues the state receives, in thousands of dollars.²³

23 This table is based on the payments shown in Table 2.2 and the methodology used in the FCC report, *State-by-State Telephone Revenues and Universal Service Data*, released April 6, 2001.

Table 2.1
Lifeline Monthly Support by State or Jurisdiction
(As of April 2001)

Note: These dollars represent submitted claims to USAC for the time period January 1998 through December 1998, including true-ups reported to date. District of Columbia has, as of December 2000, been compensated for Lifeline programs, as ETC status has finally been granted retroactive to January 1998. Similarly, Verizon-NJ and Sprint-NJ were granted ETC status retroactive to January 1998. Nevada Bell did not receive ETC status until December 1998 and began reporting Lifeline starting in January 1999.

* Subscriber data was not actually collected in 1997. USAC used estimated number of subscribers for all states.

† Average number of subscribers reported for 1998 through 2000 for companies requesting reimbursement (including true-ups through March 2001). 99% of all eligible companies have reported to USAC for reimbursement at this time.

Grand Total	\$518,327	\$0.23	\$518,327	\$0.23	\$0	\$0.00

Notes: Figures may not add due to rounding. Programs include Lifeline, LinkUp, incremental toll limitation and PICC reimbursements. USF is an abbreviation for the Universal Service Fund.

* Net revenues are positive when payments from USF to carriers exceed contributions to USF.

3. High-Cost Support

The high-cost support mechanisms enable areas with very high costs to recover some of these costs from the universal service support mechanisms, leaving a smaller remainder of the costs to be recovered through end-user rates. In this manner, the high-cost support mechanisms are intended to hold down rates and thereby further one of the most important goals of federal and state regulation -- the preservation and advancement of universal telephone service. This section of the report outlines the high-cost support mechanisms and provides data for these mechanisms. There currently are five high-cost support mechanisms. These include mechanisms for embedded high-cost loop (HCL) support¹, long-term support (LTS), local switching support (LSS), forward-looking high-cost model support, and interstate access support.

HCL support deals with non-traffic sensitive (NTS) "local loop costs" -- a term that refers to the costs of outside telephone wires, poles, and other facilities that link each telephone customer's premises to the public switched telephone network. NTS costs are allocated between the state and interstate jurisdictions because all local loops can be used for making and receiving both intrastate and interstate telephone calls. Historically, the interstate allocation was made using the Subscriber Plant Factor (SPF).² This factor is now 25% for all companies. The average cost per loop, however, varies significantly among local exchange carriers (LECs). The expense adjustment allows those study areas³ with an average unseparated cost per loop that exceeds 115% of the national average to allocate an additional portion of their NTS costs to the interstate jurisdiction and to have those costs recovered by HCL support.⁴ Table 3.1 shows the percentages of additional allocation of NTS costs to the interstate jurisdiction.⁵ HCL support was implemented during a period in which the basic interstate allocation of

-
- 1 This was formerly referred to as the Universal Service Fund, and still bears that name in the Commission rules. It is now referred to as high-cost loop support to avoid confusion with the new, more comprehensive universal service support mechanisms that the Commission developed to implement the 1996 Act. *See* 47 CFR § 36.601.
 - 2 The Subscriber Plant Factor is defined in section 36.154 (e) of the Commission's rules. It was frozen in 1981 and then transitioned to 25% between 1985 and 1993, subject to the limitations in section 36.154 (f) of the Commission's rules.
 - 3 A study area is usually an operating company's operations in one state. Holding companies may own multiple operating companies and thus have multiple study areas in a state. Study area boundaries were frozen as of November 15, 1984. Any subsequent change requires a Commission waiver of this freeze.
 - 4 In January 1988, high-cost assistance was retargeted to increase benefits to small and medium sized LECs. This retargeting took the form of changes in the additional interstate cost allocation for such LECs. The old and new high-cost formulas are compared in Table 3.1 of the Monitoring Reports in CC Docket No. 87-339.
 - 5 For example, suppose the national average cost per loop is \$240 and a company with 10,000 loops has a cost per loop of \$420, or 175% of the national average. Then for the portion of their costs between \$276 (115% of the national average) and \$360 (150% of the national

loop costs was shifted from a level based on the historical SPF to the present flat allocation factor of 25%. Both of these changes were phased in between 1985 and 1993.

Table 3.2 shows the actual payments that have been made through HCL support since its inception. The first column indicates the year in which the NTS costs were incurred. The second column indicates the year in which HCL support payments were made. The third column indicates the amount of those payments, based on the product of the transition factor shown in the fourth column and the full amounts (calculated from the formulas in Table 3.1) shown in the fifth column. The last two columns of the table show the annual growth rates in the actual payments and the full transition payments based on the payment formulas. Any deviations in HCL support amounts shown in Table 3.2 from amounts reported elsewhere are due to subsequent quarterly data revisions and true-ups.

In December 1993, the Commission, at the recommendation of the Joint Board in CC Docket 80-286, imposed a cap on HCL support payments.⁶ The cap was indexed to the rate of growth in the national total of working exchange loops. It was implemented by adjusting the national average cost per loop used to calculate each study area's high-cost assistance (using the current formula from Table 3.1) from the true average value to whatever base value is required to achieve the cap. For 1998 payments, the cap was achieved by adjusting the base value cost per loop from the national average of \$247.34 to \$248.82. A further limitation on the size of the fund was implemented on January 1, 1998, by limiting the amount of allowed corporate operations expenses.⁷ While some study areas had the amount of HCL support payments capped as a condition of Commission approval of mergers or sales or acquisitions of exchanges, the Common Carrier Bureau adopted an order removing all such caps remaining for individual study areas, retroactive to January 1, 2000.⁸

For non-rural carriers, the current support mechanisms have been replaced with new ones using forward-looking costs instead of embedded costs. On November 23, 1998, the Federal-State Joint Board on Universal Service (Joint Board) recommended that a forward-looking cost model should be used to determine federal support, but that the Commission should continue to measure costs at a study area level, rather than at a more disaggregated level that had previously been recommended.⁹ Many of

average) they would receive 65% of those costs [.65 times (\$360 - \$276) = \$54.60], plus they would receive 75% of their costs over \$360 [.75 times (\$420 - \$360) = \$45], resulting in HCL support totaling \$99.60 per loop, or \$996,000 total support.

6 *Amendment of Part 36 of the Commission's Rules and Establishment of a Joint Board*, CC Docket No. 80-286, Report and Order, 9 FCC Rcd 303 (1993). The amount of the payments for 1996 was below the cap.

7 The limitations are specified in section 36.621(a)(4) of the Commission's rules.

8 *Petitions for Waiver Concerning the Definition of "Study Area" Contained in Part 36 Appendix-Glossary of the Commission's Rules*, Order, CC Docket No. 96-45, DA 00-1761 (rel. August 4, 2000).

9 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Second Recommended Decision*, 13 FCC Rcd 24744 (1998).

these other recommendations were adopted by the Commission on May 27, 1999.¹⁰ At the same time, the Commission sought further comment on whether costs should be measured at the study area level.

On October 21, 1999, based on recommendations from the Joint Board, the Commission adopted a new high-cost support mechanism for non-rural carriers.¹¹ This mechanism is based on the forward-looking costs of providing supported services¹² as determined by the Commission's cost model.¹³ For each state, the cost model calculates the wire center average forward-looking cost per line incurred by non-rural carriers to provide supported services. These wire center average costs are then averaged at the statewide level to determine the statewide average forward-looking cost per line. The forward-looking support mechanism provides support to non-rural carriers in those states that have a statewide average forward-looking cost per line greater than the national benchmark, which is set at 135 percent of the national average forward-looking cost per line.¹⁴

10 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Seventh Report & Order and Thirteenth Order on Reconsideration*, 14 FCC Rcd 8078 (1999).

11 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Ninth Report & Order and Eighteenth Order on Reconsideration (High-Cost Methodology Order)*, 14 FCC Rcd 20432 (1999). Although the data in this report do not reflect changes made to Commission rules after April 30, 2001, we note that the Commission modified the high-cost support mechanism for rural carriers on May 23, 2001, and implementation of the modified support mechanism began July 1, 2001. See *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Fourteenth Report and Order and Twenty-Second Order on Reconsideration, Multi-Association Group (MAG) Plan for Regulation of Interstate Services of Non-Price Cap Incumbent Local Exchange Carriers and Interexchange Carriers*, CC Docket No. 00-256, Report and Order, 16 FCC Rcd 11244 (2001). Accordingly, beginning July 1, 2001, the caps for non-rural and rural companies are calculated separately. 47 C.F.R. §§ 36.602 and 36.603.

12 The services eligible for federal universal service support are listed in section 54.101 of the Commission's rules. 47 C.F.R. § 54.101.

13 The cost model consists of: (1) a model platform, which contains a series of fixed assumptions about network design and engineering; and (2) input values for the model platform, such as the cost of network components, e.g., cables and switches, as well as various capital cost parameters. The Commission adopted the model platform in the *Platform Order* released in October 1998. *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Forward-Looking Mechanism for High-Cost Support for Non-Rural LECs*, CC Docket No. 97-160, Fifth Report and Order, 13 FCC Rcd 21323 (1998) (*Platform Order*). The Commission adopted input values in the *Inputs Order* released in November 1999. *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Forward-Looking Mechanism for High-Cost Support for Non-Rural LECs*, CC Docket No. 97-160, Tenth Report and Order, 14 FCC Rcd 20156 (1999) (*Inputs Order*).

14 *High-Cost Methodology Order*, 14 FCC Rcd 20432 at paras. 10 and 55. The forward-looking support mechanism provides support for all intrastate costs that exceed the benchmark.

After determining the total amount of forward-looking support provided to non-rural carriers in a particular state, the support is then targeted to individual wire centers that have forward-looking costs in excess of the benchmark.¹⁵ Under the targeting approach, the amount of support provided to a non-rural carrier serving a particular wire center depends on the relative costs in that wire center and the number of lines served by the carrier. By comparing the relative costs in various above-benchmark wire centers, the targeting approach enables the Commission to provide greater amounts of support to carriers serving lines in wire centers with costs further above the benchmark. Thus, unlike providing a uniform per line statewide support amount, the targeting approach provides support in an amount commensurate with the cost of service, thereby encouraging carriers to serve high-cost areas.

The Commission also adopted a transitional “hold-harmless” measure to prevent rate shocks and disruptions in state rate designs when the new mechanism takes effect. As adopted, no non-rural telephone company would receive less support than it received under the existing embedded HCL support mechanism during the transition period. The Joint Board recommended that interim hold-harmless support be phased down beginning January 1, 2001.¹⁶ On December 8, 2000, the Commission adopted measures to phase down interim hold-harmless support, through \$1.00 reductions in average monthly per-line support, beginning January 1, 2001, and every year thereafter until there is no more interim hold-harmless support.¹⁷

LTS is related to interstate non-traffic sensitive costs. LTS provides support to the members of the National Exchange Carrier Association (NECA) common line pool, to allow them to charge a below-cost carrier common line (CCL) rate that is uniform for all companies in the pool. Prior to 1989, all LECs were required to be part of the NECA common line (CL) pool, and CCL rates were uniform nationwide. On April 1, 1989, companies were permitted to withdraw from the NECA CL pool and provide jurisdictionally specific CCL access charges.¹⁸

High-Cost Methodology Order, at paras. 60 - 63. Intrastate costs account for 76 percent of all forward-looking costs estimated by the model. *High-Cost Methodology Order*, at para. 63. Therefore, the forward-looking mechanism provides support for 76 percent of the forward-looking costs that exceed the benchmark. *High-Cost Methodology Order*, at para. 63.

15 *High-Cost Methodology Order*, at paras. 68-76.

16 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Recommended Decision, FCC 00J-1 (rel. June 30, 2000).

17 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Thirteenth Report and Order and Further Notice of Proposed Rulemaking, FCC 00-428 (rel. December 8, 2000).

18 See previous Monitoring Reports for a detailed list of which companies are no longer in the NECA CL pool.

To reduce disparities in CCL rates among LECs after companies were permitted to withdraw from the CL pool, two support mechanisms were set up. Transitional support consisted of payments from low-cost companies that withdrew from the pool to high-cost companies that withdrew from the pool. The transition period has ended. Long term support (LTS) originally consisted of payments to the NECA CL pool from companies that withdrew from the NECA CL pool. Companies remaining in the NECA pool charge CCL rates, pursuant to the NECA tariff, which were formerly equal to the average CCL rate of the price cap companies. Effective January 1, 1998, the funds for LTS come from the federal universal service support mechanisms. At the same time, the NECA pool rate no longer was made equal to the average price cap rate. Rather, the amount of LTS that a NECA pool member was eligible to receive in 1998 was the 1997 level of LTS (the difference between 1997 CCL revenue requirements and the sum of 1997 CCL revenues using the NECA pool rate and 1997 subscriber line charge revenues) multiplied by the rate of growth of the national average NTS cost per loop.

Nationwide pool results provided by NECA for 1999 are shown in Tables 3.3 and 3.4. Table 3.3 summarizes the CL pool revenues and expenses for the year 2000, as well as a comparison with the corresponding figures for 1999. Table 3.4 has comparable figures for NECA's voluntary traffic sensitive pool.

Table 3.5 provides a history of LTS payments. The data are based on the annual NECA NTS pool report (see Table 3.3) from February of the following year and on information provided by the Universal Service Administrative Company (USAC).

LSS is related to traffic sensitive local switching costs. The local switching support is now recovered through the universal service support mechanisms, rather than through higher traffic-sensitive access charges. Until 1997, this support was based on dial equipment minute (DEM) weighting. LSS provides support to LECs with study areas of 50,000 or fewer access lines, to help defray the higher switching costs of small LECs. The portion of these costs that are normally allocated to interstate is determined by the ratio of interstate to total dial equipment minutes, known as the DEM factor. However, LEC study areas with 50,000 access lines or fewer had that portion multiplied by a weighting factor, which was determined by the number of access lines in the study area.¹⁹ The resulting weighted DEM factor (which was not permitted to exceed .85) allowed these study areas to recover a greater portion of their local switching costs from interexchange carriers in the form of higher access charges.²⁰

Beginning in 1998, the LSS factor is calculated as the difference between the 1996 weighted DEM factor and the 1996 unweighted DEM factor. It is subject to the limit that the sum of the DEM factor and the LSS factor shall not exceed .85. Also, if the number of lines has increased since 1996 across one of the limit values of 10,000 or 20,000 or 50,000 lines, the 1996 weighted DEM factor used for computing the LSS factor is adjusted to reflect the weighting factor appropriate for the new number of lines. Table 3.6 provides a history of LSS payments since 1993.

19 The weighting factors, which became effective in 1993, are shown in Table 3.6 of the December 1998 and June 1999 Monitoring Reports.

20 The weighted and unweighted DEM factors are shown in section 8 of this report.

On May 31, 2000, the Commission established an explicit interstate access (IAS) support mechanism for price cap carriers to replace the implicit support previously collected through interstate access charges.²¹ Like LTS, the purpose of this new mechanism is to provide explicit support to ensure reasonably affordable interstate rates. This is in contrast to the Commission's other high-cost support mechanisms, which provide support to enable states to ensure reasonably affordable and comparable intrastate rates. The new mechanism provides support to carriers serving lines in areas where they are unable to recover their permitted revenues from the newly revised subscriber line charges. The support is fixed at an aggregate annual amount of \$650 million. It is targeted to the density zones that have the greatest need for it. It is provided on a portable, per-line basis. It is available on a competitively neutral basis to any eligible telecommunications carrier serving a supported customer, regardless of the technology used by that carrier.

All of the universal service support mechanisms are administered by USAC, an independent subsidiary of NECA. As part of its administration of these support mechanisms, USAC files quarterly reports with the Commission. These reports include quarterly projections of the amounts to be paid for each program, along with true-ups (differences between actual payments and projections) for prior periods, administrative expenses and interest income. The report for the first quarter of 2001 was filed on November 2, 2000; the report for the second quarter of 2001 was filed on February 6, 2001.²² Table 3.7 summarizes the annual amounts for the high-cost programs for 1998 through 2000 and the quarterly amounts for the first two quarters of 2001.²³ Tables 3.8 through 3.12 provide a summary by state of the total amounts of these projected payments. Each table summarizes the annual amounts for the high-cost programs for 1998 through 2000 and the quarterly amounts for the first two quarters of 2001. Table 3.8 summarizes HCL payments, Table 3.9 summarizes LTS payments, Table 3.10 summarizes LSS payments, Table 3.11 summarizes IAS payments, and Table 3.12 summarizes the total of these four payments. The 2001 values are based on the filing for the second quarter, which includes revisions for the first quarter. The values in Tables 3.8 and 3.12 do not take into account the new non-rural support mechanisms. Table 3.13 provides projections for 2001, by state, of the high cost support using the new non-rural forward-looking high cost model support mechanism, along with the hold-harmless support.²⁴

21 *Access Charge Reform, Price Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance Users, Federal-State Joint Board on Universal Service, Sixth Report and Order in CC Docket Nos. 96-262 and 94-1, Report and Order in CC Docket No. 99-249, Eleventh Report and Order in CC Docket No. 96-45, 15 FCC Rcd 12962 (2000) (CALLS Order).*

22 The filing dates for projections for previous quarters can be found in previous Monitoring Reports.

23 These are based on Exhibit 3 of the October 1997 report, Appendix M5 of the most recent reports, and Exhibit 5 of the other reports.

24 These projections for the new high cost model support are based on filings for the first quarter on February 6, 2001.

Table 3.14 shows, by state for 2000, the total amount of payments to carriers, the estimated contributions towards high cost support, and the net revenues the state received, in thousands of dollars.²⁵

As part of the administration of the HCL support, NECA collects certain cost data from LECs that provide service to approximately 98% of the nation's subscribers.²⁶ Each year NECA collects NTS cost and loop data from the previous year, and uses that information to distribute high-cost assistance in the following year. On September 29, 2000, NECA reported new data for 1999, and revised data for the four previous years. State totals, based on that report, covering cost data for 1999, are presented in Table 3.15. This table shows unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected Universal Service Fund HCL payments for 2001, based on 1999 data, using the high-cost formula and the cap discussed above. The final column shows the percentage of the total that goes to companies in the state.

Table 3.16 shows the changes, from the revised data for 1998 to the newly reported data for 1999, for state totals, of the unseparated NTS revenue requirement, the number of loops, the revenue requirement per loop, and the Universal Service Fund HCL payments. The phrase, "payments in later year" in the last column refers to the fact that the payments are made two years after the costs are incurred; in this case, in the years 2000 and 2001.

Tables 3.17 through 3.20 present state summaries of the historical information filed for 1995 through 1999 in the 2000 filing. Table 3.17 shows the unseparated NTS revenue requirements for each year. Table 3.18 shows the number of loops. Table 3.19 shows the unseparated NTS revenue requirement per loop. Table 3.20 shows the HCL payments for 1997 through 2001.

The next four tables in this section are data for individual study areas. Tables 3.21 through 3.25 are derived from the quarterly USAC filings of projected payments. Table 3.21 has HCL support payments. The values in this table are based on embedded costs and do not take into account the new non-rural support mechanisms. Table 3.22 has LTS payments. Table 3.23 has LSS payments. This table shows the actual payments after true-ups for 1998. Table 3.24 has IAS payments. Table 3.25 has the total support payments for all four programs. Each of these tables contains the annual amounts projected for 1998, 1999, and 2000 and the quarterly amounts projected for the first two quarters of 2001. Table 3.26 provides estimates, by study area, of the high cost support using the new non-rural forward-looking high cost model support mechanism, along with the hold-harmless support for the year 2000 and the first quarter of 2001.²⁷

25 This table is from the FCC report, *State-by-State Telephone Revenues and Universal Service Data*, released April 6, 2001.

26 These are the carriers that settle on a cost basis. Costs for the remaining LECs, which settle on an average schedule basis, are attributed by NECA on the basis of those carriers' average number of loops per exchange.

27 The apparent anomaly of US West-Wyoming getting both high-cost model support and hold-harmless support in 2000 is the result of the hold-harmless amount being greater in the first quarter and the model amount being greater for the rest of the year. Table 3.13 reflects the

Table 3.27 contains individual study area data for 1999 for unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected Universal Service Fund HCL payments for 2001, based on 1999 data, and the percentage of the national total USF that goes to the study area. In the second column of Table 3.27, the types are cost (C) and average schedule (A), indicating the form of settlements used by that study area. The third column indicates whether the study area has been designated as rural (R) or non-rural (N). In addition to the name of the study area, the name of the holding company (if any) is also shown. Table 3.28 shows the percentage changes for each of these amounts for individual study areas. In the USF columns in this table, the entry "INFINITE" indicates that the USF was zero in the first year and positive in the second year.

Tables 3.29 through 3.32 present individual study area data for the historical information filed for 1995 through 1999 in the 2000 filing. Table 3.29 shows the unseparated NTS revenue requirements for each year. Table 3.30 shows the number of loops. Table 3.31 shows the unseparated NTS revenue requirement per loop. Table 3.32 shows the Universal Service Fund HCL payments.²⁸

In compiling the historical data, it is necessary to account for changes that have occurred in the study areas over time. These changes are noted in Table 3.33.²⁹ In cases where study areas have merged, the pre-merger data for all of the merged study areas have been combined and reported as the data for the surviving study area in Tables 3.29 through 3.32. In cases where there has been an ownership change resulting in a code number change, the pre-change data is reported under the new code number and name. In the case of newly created study areas, pre-creation data is reported as 0. In Table 3.28, percentage changes in the case of mergers are comparisons of the surviving study area data with the consolidated pre-merger data, and percentage changes in the case of newly created study areas formerly served by another company are comparisons of a consolidation of the new data for both companies with the old data for the former company. No attempt has been made to adjust for sales of exchanges between study areas that were in existence both before and after the sale.

Each year NECA submits detailed account data used to calculate the unseparated revenue requirement per loop for each study area that settles on a cost basis, and total attributed revenue

actual support using the model, while Table 3.26 reflects what the model support would have been if there had not been hold-harmless support. The NA entries for a time period for some companies are due to changes in the rural vs. non-rural status of those companies between the time periods, or to the changes as to which CLECs were competing with the ILECs as eligible telecommunications carriers.

28 The differences between the values in Tables 3.21 and 3.32 are due to the facts that the amounts reported by USAC in Table 3.21 are quarterly projections, while the amounts reported by NECA in Table 3.32 are based on actuals for the first quarter of each year that do not take into account subsequent quarterly updates. Neither can be taken as the amount actually paid during the year.

29 Because the study areas were matched between years by study area code number, changes in only the name of the company are not included in this list.

requirements for study areas that settle on an average schedule basis. In their filings since 1993, in addition to submitting such information for the latest year, NECA also submitted revised information for the four preceding years. The detailed account data are not reported here, but the most recent revision of the data for each year since 1988 is available in electronic form on the **FCC-State Link** web site.³⁰

30 File names are usf93r88.zip, usf94r89.zip, usf95r90.zip, usf96r91.zip, usf97r92.zip, usf98r93.zip, usf99r94.zip, usf00r95.zip, usf00r96.zip, usf00r97.zip, usf00r98.zip, and usf00r99.zip. In each case, the first number in the file name indicates the year the data were filed and the second number indicates the year covered by the data. The file usfdef98.zip contains definitions of the data in the USF files. The file usf00af.zip contains the full paper filing that was made on September 29, 2000.

Table 3.1
Embedded High-Cost Loop Fund Formulas

(Used Since 1988)

Cost Range as % of National Average % Expense Adjustment within Range

Study Areas with Over 200,000 Loops

0% - 115%	0%
115% - 160%	10%
160% - 200%	30%
200% - 250%	60%
250% and above	75%

Study Areas with 200,000 Loops or Fewer

0% - 115%	0%
115% - 150%	65%
150% and above	75%

Beginning January 1, 2000, these are only applicable to rural companies and to hold-harmless support for non-rural companies.

**Table 3.2
Universal Service High-Cost Loop Fund Payment History**

Year Costs Incurred	Payment Year	Actual Payments	Transition Factor	Projected Payments at Full Transition	Annual Growth In Payments	Full Transition
1984	1986	\$55,626,903	1/8	\$445,015,224		
1985	1987	\$125,691,874	1/4	\$502,767,496	125.96%	12.98%
1986	1988	\$183,268,189	3/8	\$488,715,171	45.81%	-2.79%
1987	1989	\$264,553,840	1/2	\$529,107,680	44.35%	8.27%
1988	1990	\$339,176,069	5/8	\$542,681,710	28.21%	2.57%
1989	1991	\$484,814,443	3/4	\$646,419,257	42.94%	19.12%
1990	1992	\$609,361,768	7/8	\$696,413,449	25.69%	7.73%
1991	1993	\$705,121,573	1	\$705,121,573	15.71%	1.25%
1992	1994	\$725,434,165	1	\$761,523,851	2.88%	8.00%
1993	1995	\$749,546,328	1	\$805,562,633	3.32%	5.78%
1994	1996	\$762,697,762	1	\$762,697,762	1.75%	-5.32%
1995	1997	\$793,564,270	1	\$816,228,224	4.05%	7.02%
1996	1998	\$827,282,022	1	\$865,779,880	4.25%	6.07%
1997	1999	\$864,183,764	1	\$906,875,403	4.46%	4.75%
1998	2000	\$893,926,377	1	\$1,055,638,314	3.44%	16.40%
1999	2001	\$919,431,884	1	\$1,182,323,655	2.85%	12.00%

Notes: Payments for 1986 though 1998 are final and not subject to further adjustment.

Payments for 1999 through 2001 are as of the March 2001 settlement cycle and subject to change due to the 24-month settlements adjustment window.

Payment amounts for 1994 through 1995 and 1997 through 2001 are limited by the USF Cap. Amounts shown in the projected at full transition column are before application of this limit.

Payments for 1996 were also limited by the USF Cap. However, since the USF Cap limit was \$776,942,246, there was no impact on actual payments. Amount in the projected payments at full transition column are actual payments.

Payments for 2000 and 2001 are calculated as if all non-rural companies have only hold-harmless support, and not forward-looking cost support. Payments for 2001 are without consideration of the phase-down provision of hold-harmless.

Pool Results - Common Line Summary

Line Item (Note 1)	Pool Year (Note 2)		Percentage Change (Note 3)
	1999	2000	
Carrier Common Line (CCL) Earned Revenues			
Premium	\$342,386,900	\$377,478,097	10.25%
Non-Premium	\$687,683	\$213,412	-68.97%
Special Access Surcharge	\$600,914	\$760,223	26.51%
CCL Net Realized Uncollectibles	\$36,888	\$44,570	20.83%
CCL Net Earned Revenues	\$343,638,609	\$378,407,162	10.12%
End-User Net Earned Revenues (Note 4)	\$527,554,053	\$560,771,229	6.30%
Total Common Line Net Earned Revenues	\$871,192,662	\$939,178,391	7.80%
Long-Term Support	\$472,774,206	\$477,262,032	0.95%
Total Common Line Revenues	\$1,343,966,868	\$1,416,440,423	5.39%
NECA Administrative Costs	\$21,174,330	\$21,294,761	0.57%
Average Schedule Company Settlements	\$266,331,000	\$267,469,000	0.43%
Common Line Expenses and Other Taxes	\$743,963,990	\$806,676,909	8.43%
Common Line Adjusted Federal Income Tax	\$65,857,983	\$68,382,393	3.83%
Total Common Line Expenses	\$1,097,327,303	\$1,163,823,063	6.06%
Common Line Residue for Distribution (Note 5)	\$246,639,565	\$252,617,360	2.42%
Common Line Average Net Investment	\$1,945,221,547	\$2,019,963,250	3.84%
Common Line Residue Ratio (Note 6)	12.68%	12.51%	-1.37%

Note 1: All of the individual line items include some estimates and are subject to further adjustments under current NECA procedures.

Note 2: The pool year is the calendar year. The 1999 pool year data are reported as of February 29, 2000. The 2000 pool year data are reported as of February 28, 2001.

Note 3: Year-to-year changes are affected by changes in the number of companies participating in NECA tariffs, sales and acquisitions of assets by participating companies, average schedule to cost conversions, and mid-year tariff changes in rate levels.

Note 4: Amount includes end-user SLC waiver revenues for NECA tariff participants.

Note 5: Residue for distribution is total revenues less total expenses.

Note 6: Residue ratio is calculated by dividing the amount of residue for distribution by the amount of average net investment and multiplying by 100.

Traffic Sensitive Adjusted Federal Income Tax	\$30,555,428	\$31,861,849	4.28%
Total Traffic Sensitive Expenses	\$823,330,374	\$861,190,614	4.60%
Traffic Sensitive Residue for Distribution (Note 4)	\$119,587,087	\$121,572,640	1.66%
Traffic Sensitive Average Net Investment	\$905,415,933	\$934,840,755	3.25%
Traffic Sensitive Residue Ratio (Note 5)	13.21%	13.00%	-1.54%

Note 1: All of the individual line items include some estimates and are subject to further adjustments under current NECA procedures.

Note 2: The pool year is the calendar year. The 1998 pool year data are reported as of February 28, 1999. The 1999 pool year data are reported as of February 29, 2000.

Note 3: Year-to-year changes are affected by changes in the number of companies participating in NECA tariffs, sales and acquisitions of assets by participating companies, average schedule to cost conversions, and mid-year tariff changes in rate levels.

Note 4: Residue for distribution is total revenues less total expenses.

Note 5: Residue ratio is calculated by dividing the amount of residue for distribution by the amount of average net investment and multiplying by 100.

**Table 3.5
Long-Term Support Payment History**

Payment Year	Payments (\$ Millions)	Annual Growth In Payments
1989	\$235.7	
1990	\$262.6	11.40%
1991	\$271.7	3.49%
1992	\$305.7	12.51%
1993	\$322.7	5.53%
1994	\$346.6	7.44%
1995	\$382.3	10.27%
1996	\$425.6	11.35%
1997	\$469.5	10.31%
1998	\$476.3	1.45%
1999	\$473.2	-0.66%
2000	\$479.1	1.26%
2001	\$484.9	1.20%

Notes: Payments for 1989 through 1992 and 1994 through 1997 are as reported by NECA as of the end of February of the following year.

Payments for 1989 are for nine months only (program began April 1).

Payments for 1993 are as subsequently revised by NECA.

Payments for 1998 and 1999 are latest revisions provided by USAC.

Payments for 2000 and 2001 are projections provided by USAC.

**Table 3.6
Local Switching Support Payment History**

Payment Year	Payments (\$ Millions)	Annual Growth In Payments
1993	\$311.0	
1994	\$303.9	-2.28%
1995	\$325.3	7.04%
1996	\$348.0	6.98%
1997	\$350.6	0.75%
1998	\$387.3	10.46%
1999	\$382.9	-1.13%
2000	\$390.8	2.08%
2001	\$391.0	0.05%

Notes: Payments for 1993 - 1997 are estimates of DEM weighting impacts.

Payments for 1993 are as estimated in the May 1996 Monitoring Report in CC Docket No. 87-339.

For companies not in NECA's common line and traffic sensitive pools, an estimate was developed using the study area specific 4th quarter 1998 local switching support amounts. The 1998 levels were reduced by 5% per year to determine the 1994 - 1997 amounts.

Payments for 1998 and 1999 are latest revisions provided by USAC.

Payments for 2000 and 2001 are projections provided by USAC.

4. Schools and Libraries Support

Eligible schools and libraries can receive telecommunications services, Internet access, and internal connections at discounts that range from 20 percent to 90 percent.¹ The level of the discount is based on eligibility for the national school lunch program (or a federally-approved alternative mechanism), and location in a rural area. There are four types of applicants: schools, school districts, libraries (or library consortia), and other consortia of schools and libraries. The size of the program the first year was \$1.925 billion. In June of 1999, the Commission set the size of the second funding period and future funding periods equal to \$2.25 billion.²

The Schools and Libraries Division (SLD) of USAC determines the eligibility and discount level for which schools and libraries are eligible based on FCC rules. All eligible applicants must submit certain forms to the Schools and Libraries Division in sequential order to participate in the program. First, eligible schools and libraries must file an FCC Form 470, which describes the services an applicant intends to purchase. Generally, the FCC Forms 470 are posted to the SLD web site for 28 days so that providers have an opportunity to submit competing bids to perform the services.³ After selecting a service provider and contracting for services, applicants must file FCC Form 471, which details services for which a contract has been signed. Applicants must then submit FCC Form 486, which informs SLD that services are scheduled or have been received from the named service provider(s), triggering the process for SLD to receive the invoices from the service provider(s). If the service provider provided service to the applicant at a discounted rate, then the service provider submits FCC Form 474 (Service Provider Invoice Form) for reimbursement from USAC. If, however, the service provider billed the applicant for the entire non-discounted amount up front, then the applicant must file FCC Form 472 (Billed Entity Applicant Reimbursement Form), after which the Administrator disburses money to the service provider. The service provider must then reimburse the applicant.

In December 1998, the Commission changed funding years for the schools and libraries support mechanism from a calendar year cycle (January 1 - December 31) to a fiscal year cycle (July 1 - June 30).⁴ For transition purposes, the first funding period was the 18-month period that ran from January 1, 1998 through June 30, 1999. The second funding period ran from July 1, 1999 through June 30, 2000.

Similarly, the third funding period ran from July 1, 2000 through June 30, 2001, with subsequent funding periods running from July 1 to June 30 of the following calendar year.

1 Schools and libraries may not receive discounts for items such as asbestos removal, teacher training, telephone handsets, personal computers, fax machines, or modems.

2 47 C.F.R. § 54.507 (a).

3 The posted FCC Forms 470 can be viewed at www.sl.universalservice.org. In limited situations, applicants with contracts that predate July 10, 1997 are not required to post an FCC Form 470.

4 *Ninth Order on Reconsideration*, 14 FCC Rcd 377 (1998), paras. 1 and 6.

In the first funding period, requests exceeded available funding, so the Commission established rules governing funding commitments in such situations. The rules are designed to ensure that schools and libraries receive discounts for telecommunications services and Internet access services before internal connections, and that the neediest schools and libraries then receive funding priority for internal connections.

Under the Commission's rules of priority, when the filing window closes, the Administrator will calculate total requests for support submitted during that filing window. If total requests exceed total support available in that funding year, SLD will: 1) Calculate the requests for telecommunications services and Internet access for all discount categories (these services receive first priority for funding); 2) Allocate the remaining funds to the requests for support for internal connections, beginning with the most disadvantaged schools and libraries (those eligible for a 90 percent discount); 3) Commit remaining funds for internal connections to the applicants at each descending discount level until there are no funds remaining (i.e. 89%, 88%, etc).

If the remaining funds are not sufficient to support all of the eligible discount requests within a particular discount level, the Administrator will divide the total amount of remaining support available by the amount of support requested within that discount level to produce a pro-rata factor. That is, each of the schools and libraries within that discount level will receive the same proportion of the support they requested.

As of February 24, 2001, USAC had disbursed over \$1.396 billion of first fiscal year funds. Many schools and libraries that were denied funding in the first year appealed that decision. Those that have won their appeals subsequently received funding commitments from USAC. For this reason, USAC made first fiscal year funding commitments of \$71.692 million during the last quarter of 2000. As commitments continue to be granted, and disbursements made for these and prior commitments, more first fiscal year funds will be disbursed.⁵

For the second funding year the \$2.25 billion cap was sufficient to cover all applicants that filed before April 6, 1999. USAC announced that it would continue to accept "out of window" year 2 funding applications until March 31, 2000. USAC reported that it would issue funding commitments relating to those applications in the first quarter of 2001. It further reported that those funding requests sought \$370 million, but that less than \$250 million would be available. As of February 24, 2001, USAC had disbursed \$1.462 billion of second fiscal year funds. As commitments continue to be granted, and disbursements made, this amount will rise.⁶

The filing period for the third funding year (July 1, 2000 – June 30, 2001) began on November 10, 1999, and closed on January 19, 2000. USAC reports that 36,437 applications were received

5 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Second Quarter 2001*, page 24.

6 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Second Quarter 2001*, page 25.

within the filing window, asking for \$4.721 billion.⁷ As of December 31, 2000, USAC had committed \$2.085 billion,⁸ and disbursed \$267.110 million of third fiscal year funds.⁹ Because of the appeals process, there are likely to be more commitments made. Also, disbursements for these and prior commitments will continue, so the amount of funds disbursed will rise considerably.

The filing window for the fourth fiscal year (July 1, 2001 through June 30, 2002) ran from November 6, 2000 through January 18, 2001. Applications with a postmark on or before January 18, 2001 were accepted as timely filed within the window. USAC reported that, as of February 5, 2001, 37,579 “within the window” applications were received. These applications requested over \$5.5 billion of support.

USAC supplied the Commission with funding commitments and disbursements information for all funding years, accurate as of February 24, 2001. Table 4.1a summarizes the first funding period commitments by state and by type of applicant. Similarly, Tables 4.1b and 4.1c summarize the second and third funding period commitments, respectively. Tables 4.2a, 4.2b, and 4.2c are based on the same data as Tables 4.1a, 4.1b, and 4.1c, and show on a state by state basis, funding commitments for the three types of services: internal connections, Internet access, and telecommunications & dedicated access.¹⁰ For the first time, USAC submitted information to the Commission on each commitment that was made to an entity. In the past, USAC summed the information for each entity before submitting it to the Commission. In other words, in the past, if a school had received two funding commitments for Internet access, USAC would have reported to the Commission that one entity had received funding for Internet access, and the amount committed would be the sum of the two commitments. Now, both commitments appear individually. This means that the number of funding commitments reported in these tables is considerably higher than reported in the past. The lists of individual funding commitments and disbursements are too lengthy to include in this report, but are available at our web site.¹¹

7 According to USAC, larger funding requests from larger applicants and a 12% increase in the number of applicants has caused the total funding requests to nearly double from the prior year. Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Second Quarter 2000*, page 25.

8 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Second Quarter 2001*, page 26. As shown in Table 4.2c, commitments had increased to nearly \$2.094 billion by February 24, 2001.

9 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Fourth Quarter 2001*, Appendix SL 9.

10 The number of funding commitments in these tables differs from those published in earlier Universal Service Monitoring Reports.

11 The spreadsheet is compressed, and can be found on the **FCC-State Link** web site at <www.fcc.gov/ccb/stats>. The funding commitments and disbursements data for all three years are in the file <SLMar2001.zip >.

Tables 4.3a, 4.3b, and 4.3c summarize the fund commitments and disbursements by the nature of how USAC was billed (whether through the school/library, or by the service provider directly), and by type of service provider business. The tables reflect disbursements as of December 31, 2000.

Table 4.4 shows, for the first two funding periods, by state, the total amount of funding disbursements, the estimated contributions towards schools and libraries funding commitments, estimated contributions towards USAC's schools and libraries-related administrative expenses, and the net revenues the state receives.

Totals	\$1,396,250	\$1,396,290	\$33,000	100.0%	-\$33,000

¹ Because of the appeals process, funding commitments and disbursements have been made after the program year ended on June 30, 1999.

² Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The numbers in this column are used to estimate, on a state-by-state basis, the amount of money paid into the fund for disbursements and administrative costs. The state's estimated share of nationwide end-user interstate revenue is based on data from Table 4 of *State-by-State Telephone Revenues and Universal Service Data* (FCC, CCB, Industry Analysis Division, April 2001).

³ This column sums to a negative number because of administrative costs.

Note: Totals may not add due to rounding.

¹ Because of the appeals process, funding commitments and disbursements have been made after the program year ended on June 30, 1999.

² Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The numbers in this column are used to estimate, on a state-by-state basis, the amount of money paid into the fund for disbursements and administrative costs. The state's estimated share of nationwide end-user interstate revenue is based on data from Table 4 of *State-by-State Telephone Revenues and Universal Service Data* (FCC, CCB, Industry Analysis Division, April 2001).

³ This column sums to a negative number because of administrative costs.

Note: Totals may not add due to rounding.

Source: USAC data. Rollups performed by the Industry Analysis Division, FCC.

5. Rural Health Care Support

The portion of the 1996 Telecommunications Act that covers Universal Service support for rural health care providers states that “[a] telecommunications carriers shall ... provide telecommunications services ... to any public or non-profit health care provider ... at rates that are reasonably comparable to rates charged for similar services in urban areas in that state”.¹ The Commission's Universal Service rules permit eligible² health care providers to receive support for any telecommunications service.³ The length of a supported telecommunications service may not exceed the distance between the rural health care provider and the nearest large city.⁴ The Commission defined "nearest large city" as the city located in the eligible health care provider's state with a population of at least 50,000 that is nearest to the health provider's location.⁵ In addition, an eligible health care provider that cannot obtain toll-free Internet access is entitled to receive the lesser of \$180 per month in toll charge credits per month, or the toll charges incurred for 30 hours per month, for telecommunications access to an Internet service provider.⁶

In 1999, the FCC adopted two orders that significantly changed the Universal Service support program for rural health care providers. The Fifteenth Order on Reconsideration is mostly applicable to Funding Year 3 and future funding periods.⁷ This order 1) removed the per-location funding limit; 2) ended the 1.544 Mbs of bandwidth restriction and authorized support for any commercially available telecommunications service regardless of bandwidth; 3) simplified the application process by allowing discounts to be based on actual long distance charges instead of basing them on a comparison of tariffed rates in urban and rural areas; and 4) affirmed the ability of rural health care providers to join consortia and allowed new members to be added to a consortium at any time after the rural health care provider applies for support. The Fourteenth Order on Reconsideration eliminated the requirement that rural health care providers receive services from eligible telecommunications carriers.⁸

1 Section 254 (h)

2 47 C.F.R. § 54.601.

3 A 1.544 Mbps (T1) maximum bandwidth cap was employed in funding years 1 and 2. *See Report and Order, CC Docket 96-45*. Adopted May 7, 1997. The Commission removed the bandwidth cap for year three and beyond. *See Fifteenth Order on Reconsideration CC-96-45*. Adopted September 30, 1999.

4 47 C.F.R. § 54.601(c).

5 47 C.F.R. § 54.605(c).

6 47 C.F.R. § 54.621.

7 *Fifteenth Order on Reconsideration* in CC Docket 96-45 adopted September 30, 1999 and released November 1, 1999.

8 *Fourteenth Order on Reconsideration* in CC Docket 96-45 adopted September 21, 1999 and released November 3, 1999.

To apply for funding, an eligible rural health care provider must first submit FCC Form 465 (description of services requested and certification form) to the Rural Health Care Division (RHCD).⁹ The if the RHCD determines the health care provider is eligible, it posts the Form 465 on its Web site.¹⁰

After 28 days from posting, the rural health care provider may contract with the most cost-effective bidder. The service provider then fills out FCC Form 468 (verification of services to be provided), and submits it to the rural health care provider. The rural health care provider must then complete FCC Form 466 (services ordered and certification form). The rural health care provider must then submit both FCC forms to RHCD.

Upon receipt and approval of FCC Forms 466 and 468, the RHCD sends a Funding Commitment letter to the rural health care provider that notifies it of the preliminary approval of the request for support, and provides an estimate of the amount of support that can be expected. The rural health care provider must respond by submitting FCC Form 467 (receipt of service confirmation form) to verify that the service has begun. RHCD then sends a Support Schedule to the carrier and the health care provider. The carrier provides support to the rural health care provider, then invoices RHCD for the support, and upon approval, RHCD instructs USAC to reimburse the carrier.

Initially, the Commission established a \$400 million per funding year cap for the rural health care mechanism.¹¹ The Commission later determined that USAC could collect no more than \$100 million for the first funding period. For the second funding period, the Commission established a \$12 million funding cap.¹² The third and future funding periods continue to be governed by the \$400 million funding cap that the Commission initially established. For more information on the Universal Service Program for Rural Health Care providers, visit the RHCD Website.¹³

The first funding period was from January 1, 1998 through June 30, 1999.¹⁴ In December, 1998, the funding year for Rural Health Care was changed from a calendar year cycle (January 1 - December 31) to a fiscal year cycle (July 1 - June 30).¹⁵ USAC reported that all activity for the first

9 The Rural Health Care Corporation merged into the Universal Service Administrative and became the Rural Health Care Division on January 1, 1999. See *Eighth Order on Reconsideration*, adopted November 19, 1998, para. 12.

10 The forms may be viewed at <www.rhc.universalservice.org>.

11 47 C.F.R. § 54.623(a).

12 *Twelfth Order on Reconsideration* in CC Docket 96-45, adopted May 27, 1999, released May 28, 1999.

13 www.rhc.universalservice.org

14 www.rhc.universalservice.org

15 *Ninth Order on Reconsideration*, 14 FCC Rcd 377 (1998), paras. 1 and 6.

funding year has been completed. USAC committed \$3.398 million and disbursed \$3.375 million, or all but about \$22,800 of the funds set aside for those providers.¹⁶

The second funding period ran from July 1, 1999 through June 30, 2000.¹⁷ USAC reports that as of December 31, 2000, it received 1,234 FCC Forms 465, and that as of that date, it had committed \$6.784 million. After it has finished all processing all requests, USAC expects to have committed a total of \$7.105 million. Not all of the rural health care providers will use their entire commitments, however. USAC estimates that \$2.779 million of the \$7.105 million will not be used, so disbursements for the second funding year should not exceed \$4.326 million.¹⁸ As of December 31, 2000, USAC had disbursed \$2.081 million.¹⁹

The third funding period began on July 1, 2000, and runs through June 30, 2001.²⁰ The filing window for FCC Forms 465 opened on March 30, 2000, and closed on June 13, 2000. Because the requests filed within the filing window total an amount that is less than the funding cap set by the Commission, USAC continued to receive and process requests for support for year 3 after the window closed. As of December 31, 2000, 1,125 FCC Forms 465 had been received. USAC estimates that program demand will be \$10.56 million for year 3²¹. As of December 31, 2000, one commitment had been made for \$14,325.²²

USAC provides information on funding commitments and all funding authorizations made during each of the funding periods.²³ These files are available at the **FCC-State Link** web site.²⁴ Table 5.1a

and 5.1b summarize funding commitments and authorizations on a state-by-state basis. Table 5.1a shows that in the first funding year, \$3.398 million was committed, and that \$3.375 million was disbursed. Table 5.1b shows that as of December 31, 2000, \$6.716 million has been committed, and that \$2.081 million had been authorized for disbursement.

Table 5.2 shows, for the first two funding periods, by state, the total amount of funding disbursements, the estimated contributions towards rural health care funding commitments, estimated contributions towards USAC's rural health care-related administrative expenses, and the net revenues the state receives.

23 Funding authorizations are the penultimate step before payment is actually made.

24 Funding commitments and authorizations for disbursements the first two funding years are available in the file RHCDec2000.zip. The file is located under the "National Exchange Carrier Association Data" link at <www.fcc.gov/ccb/stats>.

¹ Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The numbers in this column are used to estimate, on a state-by-state basis, the amount of money paid into the fund for disbursements and administrative costs. The state's estimated share of nationwide end-user interstate revenues is based on data from Table 4 of *State-by-State Telephone Revenues and Universal Service Data* (FCC, CCB, Industry Analysis Division April 2001)

² This column sums to a negative number because of administrative costs.

Source: raw data provided by the Universal Service Administrative Company (USAC), rollups performed by Industry Analysis Division, FCC.

6. Subscribership and Penetration

The number and percentage of households that have telephone service represent the most fundamental measures of the extent of universal service. Continuing analysis of telephone penetration statistics allows us to examine the aggregate effects of Commission actions on households' decisions to maintain, acquire or drop telephone service. This section presents comprehensive data on telephone penetration statistics collected by the Bureau of the Census under contract with the Federal Communications Commission. Along with telephone penetration statistics for the United States and each of the states from November 1983 to November 2000, data are provided on penetration based on various demographic characteristics. This section also updates information on telephone penetration by income by state.¹ This information is designed to help evaluate the degree of success of making telephone service available to low-income households in each state.

The most widely used measure of telephone subscribership is the percentage of households with telephone service, sometimes called a measure of telephone penetration. Prior to the 1980s, precise measurements of telephone subscribership received little attention. Traditionally, telephone penetration was measured by dividing the number of residential telephone lines by the number of households. Measures of penetration based on the number of residential lines, however, became subject to a large margin of error as more and more households added second telephone lines and more consumers acquired second homes. By 1980, the traditional penetration measure (residential lines divided by the number of households) reached 96%, while the number of households reporting that they had telephones in the 1980 census was 92.9%.

Recognizing the need for more precise periodic measurements of subscribership, the Commission requested that the Bureau of the Census include questions on telephone availability as part of its Current Population Survey (CPS), which monitors demographic trends between the decennial censuses. This survey is a staggered panel survey in which the people residing at particular addresses are included in the survey for four consecutive months in one year and the same four months in the following year. Use of the CPS has several advantages: it is conducted every month by an independent and expert agency; the sample is large; and the questions are consistent. Thus, changes in the results can be compared over time with a great deal of confidence.

Unfortunately, the results of the CPS cannot be directly compared with the penetration figures contained in the 1980 and 1990 decennial censuses. This is due to differences in sampling techniques, survey methodologies, and the context in which the questions were asked. Thus, the 1990 decennial census reported 94.8% of all households in the United States had telephones, whereas the CPS data showed a penetration rate of 93.3% for 1990. This difference is statistically significant and appears to indicate that the CPS value may be on the low side and the decennial census value may be on the high side, with the most probable value lying somewhere in between. In the 2000 decennial census, the telephone question was changed from asking whether there was a telephone instrument to asking

1 This information was included in the FCC report, *Telephone Penetration by Income by State*, released July 13, 2001. That report contains information on the number of households in each state as well as the percentages reported here.

whether there was telephone service.²

The specific questions asked in the CPS are: "Is there a telephone in this house/apartment?" and, if the answer to the first question is "no," this is followed up with, "Is there a telephone elsewhere on which people in this household can be called?" If the answer to the first question is "yes," the household is counted as having a telephone "in unit." If the answer to either the first or second question is "yes," the household is counted as having a telephone "available." The "in unit" data and the "available" data are reported in Tables 6.6 through 6.10 and 6.12 through 6.16, and Charts 6.1 and 6.8. All of the remaining tables and charts of this section just report the "in unit" data.

Although the survey is conducted every month, not all questions are asked every month. The telephone questions are asked once every four months: in the month that a household is first included in the sample and in the month that the household reenters the sample a year later. Since the sample is staggered, the reported information for any given month actually reflects responses over the preceding four months. Aggregated summaries of the responses are reported to the Commission, based on the surveys conducted through March, July, and November of each year. The CPS later provides the Commission with the raw data files containing all of the responses to all of the questions on the CPS questionnaires in those months.³

The Census Bureau data are based on a nationwide sample of about 48,000 households in the 50 states and the District of Columbia. (The CPS does not cover outlying areas that are not states, such as Puerto Rico, Guam, the Virgin Islands, and the Northern Mariana Islands.) Because a sample is used, the estimates are subject to sampling error. For the nationwide totals, changes in telephone penetration between consecutive reports of less than 0.4% may be due to sampling error and cannot be regarded as statistically significant.⁴ As explained below, when comparing the same month in two consecutive years, changes of less than or equal to 0.3% are not statistically significant. When comparing annual averages, changes of less than or equal to 0.2% are not statistically significant. The annual averages are the average of the three surveys of the year in question. For individual states or other subgroups of the U.S. population, the amount of sampling variability is much greater, because the sample sizes are smaller. This will require larger changes to yield statistical significance at the same confidence level.

Once a year, in March, the CPS augments its sample with about 2,500 additional Hispanic households, and supplements its survey with additional questions, which include detailed information about income.⁵ In the July and November surveys, only broad income categories are reported. (These

2 The type of service (e.g., wireline or wireless) is not specified. The question only asks whether the household has service which allows them to make and receive calls.

3 Tables 6.3 through 6.5, 6.11, and 6.17 of this section are derived from these raw data files.

4 The determination of the statistical significance of a change over time is discussed below. The critical value is dependent on the sizes of the samples from which the change is computed and by the confidence level, which is 95%.

5 The responses from the additional Hispanic households are not included in Tables 6.6 through

are the categories that appear in Table 6.7.)

The data in this section are not seasonally adjusted. After adjusting for the trend over time, there is an average increase of 0.2% between November and March, followed by an average decrease of 0.1% between March and July, and another average 0.1% decrease between July and November. However, these changes are not statistically significant.

Census Bureau figures for November 2000, the most recent data available, show that the percentage of households subscribing to telephone service is 94.1%, which is unchanged from November 1999. The average penetration rate for the year 2000 is 94.4%, which is up 0.2% from the 1999 average. Although this change is not statistically significant, the annual average for 2000 is the highest annual average ever reported by the CPS. As a result of an increasing number of households, 1.1 million households were added to the nation's telephone system between November 1999 and November 2000.

This section includes figures showing subscribership percentages by state, by the head of the household's age and race, by household size, by income, and for adult individuals by labor force status. The November 2000 data show that 94.8% of adult individuals in the civilian non-institutionalized population have a telephone in their household. This figure is down 0.3% from the November 1999 level. The average penetration rate for 2000 is 95.1% for adult individuals, which is down 0.1% from the 1999 average. These decreases are not statistically significant.

This section contains seventeen tables and nine charts presenting penetration statistics for various geographic and demographic characteristics. The charts and the first five tables present summaries of the available information. Tables 6.6 through 6.11 present more detailed information. In Tables 6.6 through 6.10, only the annual averages are included for the years 1984 through 1997. March, July, and November data for those years are available in Monitoring Reports in CC Docket Nos. 87-339 or 98-202. Tables 6.12 through 6.17 provide information necessary to determine the statistical significance of changes in the penetration rates over time.

Table 6.1 summarizes the telephone penetration for the United States, combining information on the number of households with the penetration rates.

Chart 6.1 graphically depicts the nationwide penetration rates for households over time.

Table 6.2 summarizes the telephone penetration rates by state, showing the average rates for 1984 and 2000, the change between those two years, and an indication as to whether the change is statistically significant. The statistical significance of a change is determined not only by the magnitude of that change, but also by the sizes of the samples used to estimate the change.

The Commission's Lifeline program was instituted in 1985 to help low-income households afford the monthly cost of telephone service. Under the federal Lifeline program, local telephone

6.10, but they are included in Table 6.11. Thus, in some cases, there may be small discrepancies between the percentages in Table 6.6 and Table 6.11.

companies offer reduced rates to qualifying households and currently receive reimbursement from the federal universal service support mechanisms. Initially, the program was available only in those states that chose to participate by providing matching assistance.

Effective in 1998, the federal Lifeline program was revised so that a basic level of assistance would be provided in all states. The basic level of federal assistance was \$5.25 per month for each participating household.⁶ Additional federal support is also provided wherever a state chooses to provide matching assistance, at a rate of \$1 in federal support for each \$2 of state matching support, up to a maximum of \$1.75 federal support (corresponding to \$3.50 of state matching support). States may provide further support without further matching federal assistance.

To help evaluate the effect of the federal Lifeline program, Table 6.3 focuses on changes in telephone penetration rates from just before the program was established to just before it was substantially expanded in 1998, by comparing penetration rates for states with and without state Lifeline programs prior to 1998.⁷ Briefly, penetration rate increases were greater, on average, in states with Lifeline programs than in states without Lifeline programs.⁸ The effect is especially apparent for low-income households,⁹ which are the households primarily affected by the federal and state Lifeline programs. Between March 1984 and March 1997, the increase in the average penetration rate in states with Lifeline programs was 6.5% for low-income households. During this period, subscribership among low-income households undoubtedly increased for other reasons as well, but the increase in those states that adopted Lifeline programs was double that of states that did not adopt such programs.

Information on all households is also included in Table 6.3. Overall penetration rates are more generally available and more commonly cited as measures of penetration than are rates only for low-income households. Penetration rate increases were again greater, on average, in states that established Lifeline programs. The increase for states with Lifeline programs was statistically significant,¹⁰ but the

6 On July 1, 2000, the maximum residential subscriber line charge was increased by \$0.85. The basic federal Lifeline support level was correspondingly increased to a maximum of \$6.10 per line per month. Thus, the total federal and state support level generally increased by \$0.85 at that time.

7 The expanded program was adopted in 1997, and took effect on January 1, 1998. States with Lifeline programs prior to 1998 are identified in Table 6.3 by showing that the year Lifeline began was before 1998. Prior to the expansion, states participating in the federal Lifeline program were required to match the federal support with their own state support.

8 The averages for the two groups of states were computed as weighted averages of the states in the groups, using the total number of households in each state as weights.

9 Low-income households are those with incomes under \$10,000 (expressed in 1984 dollars).

10 See the paragraph describing Tables 6.12 through 6.16 for a discussion of the determination of the statistical significance of a change over time. The critical value is dependent on the sizes of the samples from which the change is computed.

increase for other states was not. Thus, it appears that increases in subscribership among low-income households were sufficient to have measurable impacts on the overall level of subscribership in states with Lifeline programs. States that adopted Lifeline programs before 1998 generally had lower penetration rates in 1984 than those that did not adopt such programs. By 1997, the difference in the penetration rates for the two groups diminished significantly.

Table 6.4 focuses on the change in penetration rates between March 1997 (before the expansion of the federal Lifeline program) and March 2000. The states are divided into three groups:

- “Full Assistance” states providing sufficient support to get the maximum federal matching support. The total federal and state support in these states was \$10.50 or more;¹¹
- “Intermediate Assistance” states providing some support, but less than enough to qualify for the maximum federal support. The monthly level of support in such states was more than \$5.25, but less than \$10.50;
- “Basic Assistance” states providing no support, but receiving the basic federal support of \$5.25 per line per month.

On average, for low-income households in those states where the maximum federal support is provided, telephone penetration increased significantly, by 2.2%, between March 1997 and March 2000. In this group of states, there was a small but also statistically significant increase in the overall penetration rate for all households. For states with some but less than the maximum matching federal support, there was only a small (and statistically insignificant) increase in the low-income penetration rate and no change at all in overall penetration. For states with just the basic federal support, there was, on average, a small, albeit insignificant decline in penetration for both low-income households and all households. On average, states with greater support had lower penetration rates in 1997. By 2000, the penetration rates for the groups nearly equalized.

The results are consistent and significant. The federal Lifeline program has raised penetration rates and the sizes of the increases are related to the amount of assistance provided.

Data on individual states are provided in Table 6.5. The support amounts shown in Table 6.5 are the total of federal and state support, as of January 2000.

Chart 6.2 depicts the states with average year 2000 penetration rates (as shown in Table 6.2) more than 1% below the national average, within 1% of the national average, or more than 1% above the national average.

Chart 6.3 depicts changes in household penetration rates by state (as shown in Table 6.2) between the average year 1984 and year 2000 rates. States with statistically significant increases or decreases are shown, along with other states with increases or decreases.

Chart 6.4 depicts the relationship between telephone penetration and household income, using average year 2000 penetration rates for all households and for households headed by white, black, and

11 Any total support over \$10.50 (now increased to \$11.35) is not matched by further federal support.

Hispanic persons.¹² It is based on data in Table 6.7.

Chart 6.5 depicts the relationship between telephone penetration and household size, using average year 2000 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.8.

Chart 6.6 depicts the relationship between telephone penetration and the head of the household's age, using average year 2000 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.9.

Chart 6.7 depicts the relationship between telephone penetration and labor force status for civilian non-institutionalized adults, using average year 2000 penetration rates for all adults and for white, black, and Hispanic adults. It is based on data in Table 6.10.

Chart 6.8 graphically depicts the nationwide penetration rates for civilian non-institutionalized adults over time. It is also based on data in Table 6.10.

Chart 6.9 shows the telephone penetration rates in March of each year through 2000 for each of five income categories for the total United States. It is based on data in Table 6.11. The income categories (expressed in March 1984 dollars) are: \$9,999 or less; \$10,000 - \$19,999; \$20,000 - \$29,999; \$30,000 - \$39,999; and \$40,000 or more. These categories were chosen because they are of approximately equal size, both in terms of income ranges and the number of households in each category. As can be seen from the chart, most income categories have experienced increases in penetration over time, with the largest increases being in the lowest income categories. The changes between 1984 and 2000 are statistically significant for the two lowest income categories and for all households, but not for the three highest income categories.¹³ Not all of the increases in the national total penetration rate can be explained by increases in real income, because real income increases are reflected in the movement of households between categories. Thus, penetration changes within each income category represent changes holding real income constant.

Table 6.6 shows the CPS responses for the United States and for each state beginning with November 1983. Because the CPS began collecting this data only in 1983, comparable values are not available prior to November 1983. For each of the surveys, the column headed "Unit" indicates the percentage of households for which there is a telephone in the housing unit. The column headed "Avail." indicates the percentage of households which have telephone service available for incoming calls, either in the housing unit or elsewhere (such as at work or at a neighbor's home).

Table 6.7 shows the nationwide penetration rates for households by income and the race of the

12 The CPS includes three racial categories: white, black, and other. Others, which include Native Americans, Asians, and Pacific Islanders, are not reported separately because of small sample sizes, but they are included in the totals. Hispanics are reported as an ethnic group, and can be of any race.

13 See footnote 14 for the critical values for these significance tests.

head of the household. It shows a strong relationship between income and penetration. Caution should be used in comparing these figures over time, because these income levels are not adjusted for inflation.

Thus, the same nominal income level at two points in time will reflect different real incomes in terms of purchasing power. Also, the income categories have changed over time due to the changing value of the dollar. Consequently, when evaluating penetration changes by income levels over time, Table 6.11 should be used.

Table 6.8 shows the nationwide penetration rates for households by the size of the household and the race of the householder. It shows that penetration is higher for households of 2 to 5 people than it is for single-person households or those with 6 or more people.

Table 6.9 shows the nationwide penetration rates for households by the age and race of the head of the household. It shows that the penetration rate is lowest for young and non-white households.

Table 6.10 shows the nationwide penetration rates for all persons that are at least 15 years old in the civilian non-institutionalized population by their race and employment status. Since this table is for individual adults rather than households, the total penetration rates are different from those in the previous tables. It shows that penetration is lowest among the unemployed.

Table 6.11 shows the penetration rates for each of the income categories shown in Chart 6.9 for each state for March of each year through 1998. The more detailed information from the March surveys makes it possible to adjust the income categories for inflation. The relative levels of the March Consumer Price Index for all items (as reported in Table 7.4) were used to make the inflation adjustment. Thus, for example, \$10,000 in March 1984 dollars had the same purchasing power as \$16,676 in March 2000 dollars. The precise current dollar values in each year are reported at the end of Table 6.11.

Tables 6.12 through 6.16 present the critical values at the 95% confidence level for testing the statistical significance of changes in penetration rates over time in the earlier tables. These critical values are relevant because changes less than or equal to the values shown are likely to be due to sampling error, and thus cannot be regarded as demonstrating that a change in telephone penetration has occurred. In some cases, these critical values are very large because the sample sizes are very small for these subcategories, rendering the changes in estimated penetration rates unreliable. Because there is an overlap of half of the sample from year to year, but no overlap in the sample between surveys that are four months apart, annual changes are less subject to variations in sampling error. Consequently, the critical values should be multiplied by 0.8 when making a comparison for the same month in two consecutive years. When comparing the annual averages, the critical values should be multiplied by 0.5774, since these averages are based on three surveys, and hence have a lower standard error. When comparing annual averages of two consecutive years, the critical values should be multiplied by .46, taking into account both of the above factors.

Table 6.17 shows the sample sizes on which the estimates of Table 6.11 are based. The sampling variability is inversely related to the square root of the sample size. The critical values for individual income categories in Table 6.11 can therefore be estimated by taking the critical value for the state "In Unit" total and multiplying it by the square root of the ratio of the sample size for the state total to the sample size for the income category. In most cases, the critical value for an individual income

category will be between two and three times the critical value for the state total.¹⁴ In some cases, these critical values are very large because the sample sizes are very small for these subcategories, thereby rendering the estimated penetration rates unreliable.

14 For example, using this methodology to calculate critical values for comparing the 1984 and 2000 values for the United States Total, the critical values are 0.8% for the \$9,999 or less, the \$10,000 - \$19,999, and the \$40,000 or more categories, 0.9% for the \$20,000 - \$29,999 categories, and 1.1% for the \$30,000 - \$39,999 category. These compare with 0.4% for all households.

Table 6.1
Household Telephone Subscribership in the United States

Date	Households (millions)	Households with Telephones (millions)	Percentage with Telephones	Households without Telephones (millions)	Percentage without Telephones

Pennsylvania	94.9	96.6	1.8 *
Rhode Island	93.6	94.9	1.3
South Carolina	83.7	93.2	9.5 *
South Dakota	93.2	94.3	1.1
Tennessee	88.5	95.5	7.0 *
Texas	88.4	93.5	5.1 *
Utah	92.5	95.9	3.4 *
Vermont	92.3	95.6	3.3 *
Virginia	93.1	95.4	2.3 *
Washington	93.0	94.9	1.9 *
West Virginia	87.7	94.0	6.3 *
Wisconsin	95.2	94.8	-0.4
Wyoming	89.9	94.7	4.9 *
Total United States	91.6	94.4	2.8 *

* Increase is statistically significant at the 95% confidence level.

† Decrease is statistically significant at the 95% confidence level.

Note: Differences may not appear to equal changes due to rounding.

Table 6.3
Comparison of Penetration Rates for States With and Without Lifeline Assistance

Lifeline Category	Low-Income Households #			All Households		
	March 1984	March 1997	Change	March 1984	March 1997	Change
With Assistance	79.3%	85.8%	6.5% *	91.5%	93.9%	2.4% *
Without Assistance	83.6%	86.9%	3.3% *	93.3%	94.4%	1.0%
Average All States	80.1%	86.0%	5.9% *	91.8%	94.0%	2.1% *

Households with income under \$10,000 expressed in March 1984 dollars.

* Change is statistically significant at the 95% confidence level.

Note: Changes may not appear to be the same as calculated differences due to rounding.

Table 6.4
Comparison of Penetration Rates for States by Level of Lifeline Assistance

Lifeline Category	Low-Income Households #			All Households		
	March 1997	March 2000	Change	March 1997	March 2000	Change
Full Assistance	85.2%	87.4%	2.2% *	93.4%	94.4%	0.9% *
Intermediate Assistance	86.3%	86.9%	0.6%	94.7%	94.7%	0.0%

7. Rates and Price Indices

This section contains information on telephone price indices and rate levels.¹ It describes and presents a series of price indices maintained by the Bureau of Labor Statistics (BLS). It also discusses rate levels and changes in average rate levels.

Telephone Service Price Indices

The BLS collects a variety of information on telephone service as part of three separate programs -- the Consumer Price Index (CPI), the Producer Price Index (PPI), and the Consumer Expenditure Survey. They can be found on the Internet at www.bls.gov/datahome.htm. The monthly price indices represent prices sampled in the middle of the month.

A Consumer Price Index for telephone services was first published in 1935.² Since that time, telephone prices have tended to increase at a slower pace than most other prices. Table 7.1 shows long-run changes in the Consumer Price Indices for all items, all services, telephone services, each of the seven major categories that currently constitute the overall CPI, and several services that are often characterized as public utilities. The price of telephone service has increased less rapidly than the prices of most of these categories when viewed over a long period of time. Chart 7.1 shows the levels of the overall CPI and the CPI for telephone services over time.

The CPI index of telephone services is based on a "market basket" intended to represent the telephone-related expenditures of a typical urban household. It includes both local and long distance services. The annual rate of change during recent years is shown in Table 7.2 for the overall CPI (which measures the impact of inflation on consumers), and the CPI for telephone services. In addition, Table 7.2 shows the Gross Domestic Product chain-type price index (which reflects inflation throughout the economy) prepared by the Bureau of Economic Analysis. Chart 7.2 shows the changes in the overall CPI and the CPI for telephone services over time.

For 2000 the nation's overall level of prices (measured by the CPI for all items) rose by 3.4%. The CPI for telephone services fell by 1.6% during 2000. The CPI for telephone services is composed of three subindices. During 2000, the local service component (including subscriber line charges) rose by 4.1%, while the price index for interstate toll calls fell by 7.4%, and the price index for state toll calls fell by 5.2%. The changes in these subindices over time are shown in Chart 7.3.

1 For more detailed information, see *Reference Book of Rates, Price Indices, and Household Expenditures for Telephone Service*, published by the FCC's Industry Analysis Division in June 1999.

2 BLS publishes two sets of Consumer Price Indices. The CPI-U, used herein, is based on expenditures of all urban consumers. The CPI-W series is based on expenditures of urban wage earners and clerical workers.

The Bureau of Labor Statistics publishes a number of price indices related to local telephone service, two of which are important to the monitoring program. The CPI index of local telephone charges is based on a broadly defined "market basket" of local services that includes monthly service charges, message unit charges, leased equipment, installation, service enhancements (such as tone dialing and call waiting), taxes, subscriber line charges, and all other consumer expenditures associated with local telephone services except long distance charges. In contrast, the PPI index of monthly residential rates is much more narrowly defined. It is based only on monthly service charges for residential service, optional tone dialing service, and subscriber line charges. It excludes taxes and all other telephone service charges. The annual rates of change for these two indices are presented in Table 7.3.

CPI data are available for intrastate toll and interstate toll services since December 1977. Table 7.3 also presents the annual changes in these series for recent years.

Price indices are less reliable when industries are changing rapidly. For example, in 1992, long distance carriers began to increase basic long distance rates while at the same time greatly expanding their range of discount offerings aimed at medium and heavy users of long distance service. The fixed market basket of toll calls measured for the CPI did not fully reflect these discounts. In 1998, the CPI for telephone services was altered to include cellular telephone services, making the new index not directly comparable to prior years. In 1995, BLS made major changes to the PPI telephone series, and there are no data after July 1995 comparable with prior data. At that time the BLS introduced revenue-weighted telephone price indices. The new indices categorize the telephone industry into much finer detail, though the new series are not comparable to the old in many categories. Because of these sorts of difficulties, measures of average revenues are sometimes used as alternatives to price indices.

Monthly data for the CPI telephone indices are shown in Table 7.4. Monthly data for the new CPI indices are shown in Table 7.5, and the current PPI indices are shown in Table 7.6.³

Information on Rate Levels

Local rates are regulated by state regulatory agencies and vary greatly from area to area. Characterization of any rate as "typical" is therefore difficult. Table 7.7 presents average local residential rates in urban areas. The price indices published by the BLS indicate percentage changes in the price of the telephone services. The BLS does not publish the actual level of rates. The averages shown in Table 7.7 are based on an FCC survey using the same sampling areas and weights used by the BLS in constructing the Consumer Price Index. In October 2000 the national average for the representative total residential service charge was \$20.78 monthly. The average charge for connecting new phone service was \$44.10.

Table 7.8 presents average monthly local rates for single-line business customers in urban areas. Like the residential rates presented above, they are based on a FCC survey using the same sampling areas and weights used by the BLS in constructing the Consumer Price Index. In

3 The discontinued Producer Price Indices through July 1995 can be found in Table 5.6 of the *Monitoring Report*, CC Docket No. 87-339, May 1997.

October 2000, the representative average monthly charge was \$41.80, while the average charge for connecting phone service was \$72.29. Table 7.9 presents comparable data for businesses with a key system line, showing an average monthly charge of \$49.43 in October 2000, and an average connection charge of \$174.86. Table 7.10 presents comparable data for business with a PBX trunk, showing an average monthly charge of \$53.10 in October 2000 and an average connection charge of \$174.46.

Basic schedule rates of AT&T, MCI, and Sprint for representative directly dialed interstate long distance calls are shown on an annual basis for 1980 through 1999 in Table 7.11 for residential customers and Table 7.12 for business customers. Higher charges apply to other types of calls, such as those using operator assistance. Lower prices are available through calling plans and other volume discounts. In 1993, AT&T first began to charge different rates to residential and business customers. Since 1984, as a result of telephone rates becoming less distance sensitive, basic schedule charges for directly dialed interstate calls have fallen for calls over longer distances and risen for calls over shorter distances.

Table 7.13 contains average revenue per minute for interstate calls. From 1984 to 1994, AT&T's average revenue per minute declined from 32 cents per minute to 18 cents per minute -- a drop of over 40%. Table 7.13 also shows revenue-per-minute estimates calculated by the FCC staff for all carriers. These estimates show that billed revenue per minute has continued to decline for both international and domestic services.

Subscriber Line and Access Charges

Long distance companies rely on the loops, switches, and transport facilities of local telephone companies for access to their customers. As a result, local telephone companies recover a portion of their costs from long distance companies accessing their networks. Both the manner in which these access charges have been assessed and the proportion of the costs they have recovered have varied considerably over time.

In the early 1980s, AT&T provided about three-quarters of the nation's local telephone service and almost all interstate long distance service. Because revenue sharing was largely an internal process for AT&T, it was able to charge prices above cost for long distance calls and share the revenues with local telephone companies. These transfers, while reducing the pressures on the local companies to raise monthly local rates, contributed to inefficiently high long distance rates. The high rates were responsible for suppressing demand for long distance calls and inducing large corporations to bypass the public switched network. Moreover, while such revenue sharing arrangements were sustainable in an industry where one firm monopolized both long distance and local service, they were not compatible with a competitive long distance industry.

In mid-1984 the FCC, in cooperation with a Federal-State Joint Board comprised of both federal and state regulators, introduced sweeping changes to the way that local companies charged for their services. The historic method of sharing revenues was replaced with a new system of access charges that provided a uniform method for local telephone companies to charge for the origination and termination of interstate traffic on their local networks. In particular, monthly subscriber line charges (SLCs) were introduced to recover a portion of the

fixed costs of the local telephone companies' loops directly from end users on a per-line basis. Since local telephone companies were required to reduce their charges to long distance carriers -- dollar for dollar -- the introduction of SLCs permitted reductions in implicit subsidies from long distance service to local service. The rebalancing of prices between local service and interstate long distance calls during the 1980s had a fundamental impact on the telephone industry as the price of long distance service fell and the volume of long distance calling surged.

In mid-1997, as part of its implementation of the 1996 Telecommunications Act, the FCC introduced further interstate access charge reform. Presubscribed interexchange carrier charges (PICCs) were created in order to allow local carriers to recover the remaining portion of their fixed loop costs from long distance carriers on a per-line, instead of a per-minute, basis. Flat cost recovery on a per-line basis not only eliminates the remaining inefficiency in the pricing of long distance access, but allows local companies to recover costs in a competitively neutral manner, consistent with the goals of the 1996 Act. A further access charge reform was adopted on May 31, 2000, which eliminated the PICC and consolidated it with the SLC. This took effect on July 1, 2000.⁴

Average monthly SLCs and PICCs are shown in Table 7.14 and average per-minute rates charged to long distance carriers are shown in Table 7.15. Both tables report historical averages for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and LECs in the National Exchange Carrier Association (NECA) pool. These LECs control over 98% of the industry's regulated access lines. Current per-line charges and per-minute charges are reported for each of the carriers in Tables 7.16 and 7.17, respectively.

The averages in Table 7.15 clearly illustrate the effectiveness of access reform in reducing the prices long distance carriers pay per minute for access to the local telephone companies' networks. The reductions in per-minute access prices over time have been a major contributing factor to reductions in long distance prices.

4 Although the changes took effect on July 1, some companies made subsequent adjustments to their tariffs, which did not take effect until August 11.

† CPI toll indices represent rates for households. Through 1994, PPI toll indices represent rate changes for both business and residential consumers. Since 1995, PPI indices reflect rates for residential customers.

* The PPI telephone indices were revised in June of 1995. The series are not comparable. Due to substantial month to month variation in the new PPI indices, PPI price levels are determined using a five-month weighted average.

* This table shows average rates (weighted by access lines) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool.

† Prior to 1/01/98 carriers did not charge separate subscriber line charge (SLC) rates for primary and non-primary residential lines. Therefore, the residential and single-line business average SLCs reported prior to 1/01/98 include all residential SLC charges. The average residential and single-line business SLC rate as of 1/01/98 excludes non-primary residential SLC charges. Non-primary SLC charges are now reported separately, except for the LECs in the NECA pool, which continue to charge a single residential SLC. Under price-cap regulation, as of July 1, 2000, the caps on SLCs for primary residential and single-line business, non-primary residential, and multiline business and Centrex lines equal \$4.35, \$7.00, and \$9.20, respectively. For NECA pool companies, the residential SLC cap is \$3.50, while the multiline business and Centrex SLC cap equals \$6.00.

‡ On 1/01/98 price-cap carriers began to charge presubscribed interexchange carrier charges (PICCs). The reported PICCs are averages per line including both price-cap and NECA pool lines. While carriers do not charge different rates for Centrex and multiline business SLCs, they do charge different PICC rates for these lines. Therefore, the average multiline business and Centrex PICC rates are reported separately. However, multiline business line counts, used to compute average PICC rates, include Centrex lines for LECs in the NECA pool, which do not charge PICCs or distinguish in access filings between the two line types. On 7/01/00 price-cap carriers stopped charging residential and single line business PICCs. Therefore, under price-cap regulation, as of July 1, 1999, the caps on PICCs for primary residential and single-line business, non-primary residential, and multiline business lines equal \$0.00, \$0.00, and \$4.31, respectively. Centrex groups of 9 or fewer lines are capped at the multiline business PICC rate of \$4.31 per group. Centrex groups with more than 9 lines are capped \$0.48 per line (1/9th the multiline business rate).

* This table shows average rates (weighted by minutes of use) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. The average rates reported here do not include the average revenue per minute from subscriber line charges (SLCs) or primary interexchange carrier charges (PICCs), which are reported in Table 7.14.

† Non-traffic sensitive charges include charges assessed on a per-month per-unit basis. Prior to 07/01/94 these charges were included in the average traffic-sensitive rates.

‡ The total charge per conversation minute consists of charges on the originating end of the call, which are adjusted for dialing and call setup time, plus charges on the terminating end. Originating charges per conversation minute equal the carrier common line charge per originating access minute plus the traffic-sensitive charge per switched minute, both multiplied by 1.07 to account for dialing and call setup time, plus the non-traffic-sensitive charge per switched minute. Terminating charges per conversation minute equal carrier common line charges per terminating access minute plus both traffic-sensitive and non-traffic-sensitive charges per switched minute.

* This table shows average rates (weighted by access lines) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. Rates are composites of all regions and subsidiaries of each local exchange carrier. No information is available for those carriers that are not in the NECA pool, but are subject to rate-of-return regulation.

† Access line counts measure lines that companies report as qualified to receive subscriber line charges (SLCs). ISDN-BRI lines, which are charged non-primary SLC and PICC rates are included in the non-primary residential line counts. ISDN-PRI lines, which are charged rates equal to five times the multiline business SLC and PICC rates, are multiplied by five and added to multiline business counts.

* This table shows average rates (weighted by minutes of use) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. Rates are composites of all regions and subsidiaries of each local exchange carrier. No information is available for those carriers that are not in the NECA pool, but are subject to rate-of-return regulation. The average rates reported here do not include the average revenue per minute from subscriber line charges (SLCs) or primary interexchange carrier charges (PICCs), which are reported in Table 7.16.

† Non-traffic sensitive charges include charges assessed on a per-month per-unit basis. Prior to 07/01/94 these charges were included in the average traffic-sensitive rates.

‡ The total charge per conversation minute consists of charges on the originating end of the call, which are adjusted for dialing and call setup time, plus charges on the terminating end. Originating charges per conversation minute equal the carrier common line charge per originating access minute plus the traffic-sensitive charge per switched minute, both multiplied by 1.07 to account for dialing and call setup time, plus the non-traffic-sensitive charge per switched minute. Terminating charges per conversation minute equal carrier common line charges per terminating access minute plus both traffic-sensitive and non-traffic-sensitive charges per switched minute.

8. Network Usage and Growth

To monitor use of the public switched telephone network, the National Exchange Carrier Association (NECA) provides quarterly reports to the Commission on the volume of interstate access minutes of use (MOU) passing through the local switches. To supplement this information, local telephone companies that settle on a cost basis also provide, on an annual basis, their dial equipment minutes (DEM) and factors. Much of this information is not otherwise collected by any single entity.

The data reported in this section include new annual data for 1999 and revisions of the data that were contained in our previous reports.¹ Also included are the latest quarterly estimates of industry total access minutes, through the first quarter of 2000. The minutes reported here are those minutes that pass through the incumbent local exchange carriers' switches.

Beginning with data for 1999, local switching access minutes are now reported instead of CCL access minutes for non-participants in the NECA common line tariff. Also, only total minutes are being reported. We no longer receive monthly data. NECA now reports total local switching minutes quarterly instead of the monthly carrier common line (CCL) access minutes, which were previously reported and shown in prior monitoring reports. There are three reasons for this.

First, access reform changes that were implemented on January 1, 1998, have already caused the CCL rates for some price-cap incumbent local exchange carriers (ILECs) to go to zero, and will eventually cause the CCL rates for all price-cap ILECs to go to zero. Since ILECs derive their reported CCL minutes by dividing the CCL revenue by the CCL rate, this presents a reporting problem where a price-cap ILEC's CCL rates are zero.²

Second, the amount of non-premium minutes in the quarterly reports has declined to a level where it is no longer significant. Non-premium minutes for 1984, which was the first period for which data are available, represented 13% of the total access minutes. For 1998, non-premium minutes represented only 0.07% of the total minutes.

Third, quarterly data, rather than monthly data, are sufficient and less burdensome for the carriers to maintain.

Table 8.1 presents NECA's latest available information on local switching access minutes for interstate traffic that pass through the ILECs' switches. Quarterly data are shown for totals of the tier 1 carriers, the non-tier 1 carriers, and the industry. These figures do not include the minutes from the closed end of WATS or toll-free (800/888/877/866) calls. Table 8.2 provides quarterly industry total access minutes back to mid-1984. Chart 8.1 shows annual total access minutes graphically.

Table 8.3 summarizes annual data for the total industry for 1980 through 1999 on local, state, interstate, and total DEM minutes. It also shows annual percentage growth rates and the distribution

1 Data for 2000 are scheduled to be submitted by NECA on March 1, 2002.

2 Because the revenues are also zero, this calculation becomes zero divided by zero, which is undefined.

between categories of usage. Table 8.4 summarizes industry total lines.³ Table 8.5 shows the average daily line usage. It is calculated from the values in Tables 8.3 and 8.4.

The NECA compilation of data provided at the study area level appears in Tables 8.6 through 8.12. These tables provide annual data for the years 1996 through 1999.⁴ In order to be responsive to state concerns, the study areas are sorted by state, and state totals or averages (where applicable) are provided. Within each state's listing, the study areas are arranged in numerical order by their NECA study area code.⁵ The second column identifies whether a study area is part of a Tier 1 cost company, a Tier 2 cost company, or an average schedule company (designated by a 1, 2, or A, respectively). The data in these tables are revised and supersede the usage data in previous reports.⁶ Table 8.6 provides data on interstate access minutes of use. This table includes data for the study areas of average schedule companies. Tables 8.7 through 8.10 provide data on dial equipment minutes for cost companies only. Table 8.7 has local minutes; Table 8.8 has state toll minutes; Table 8.9 has interstate minutes; and Table 8.10 has total minutes.

Tables 8.11 and 8.12 present data on interstate separations factors. Table 8.11 presents DEM factors for the years 1996 through 1999. These are the ratios of interstate DEM to total DEM. Table 8.12 presents weighted (or transitional) DEM factors.

Table 8.13 provides a cross-reference table of the NECA state codes that are part of their study area codes.

The following descriptions of minutes of use measures are based on information provided by NECA:

Access MOU are "earned MOU" which are derived by dividing the earned revenues by the corresponding rate. This definition of access minutes is in agreement with the tariff review plan and ARMIS reports. Access minutes of use generating revenues have been discounted, which can produce distortions in revenue amounts. Further, revenues are normalized to include changes in terminating/originating and percent interstate use factors, billing adjustments, and the imputations of access charges (where applicable). Revenues are also calendarized, which will change derived minutes.

3 These lines are loops reported for the universal service high cost loop support. See Table 3.17 of this report.

4 Similar data (for cost companies) going back to 1992 appear in the June 1999 *Monitoring Report*, data going back to 1984 appear in the May 1993 *Monitoring Report*, and data going back to 1980 appear in the January 1992 *Monitoring Report*.

5 A study area is usually an operating company's operations in one state. The first two digits of the NECA study area code identify the state, and the remaining four digits identify the study area. The numerical code for each state is shown in Table 8.13.

6 In cases where study areas have merged, the historical data have been restated to reflect the merger.

Access MOU include only the domestic portion of international calls. Similarly, WATS and toll-free (800/888/877/866) calls are counted only on one end of the call.⁷ Finally, minutes include time for incomplete calls and setup time.

⁷ WATS calls generate access minutes only at the terminating end of the call and toll-free (800/888/877/866) calls generate access minutes only at the originating end of the call; both types of minutes are counted in the terminating minutes.

9. Quality of Service

This section summarizes various kinds of service quality data filed by certain local exchange telephone companies in April 2001 covering the 2000 calendar year. The Federal Communications Commission (FCC or Commission) does not impose service quality standards, *per se*, on communications common carriers. Rather, the Commission annually monitors carrier-submitted data and publishes the most recent quality of service information available in this data section prior to releasing a separate report on recent quality of service trends.¹ The data contained here provides an initial view of the most current quality of service data including customer-initiated trouble reports and company responses. This section publicizes information about company performance and, specifically, statistics about company responsiveness to network failures and associated consumer complaints. We include, in the tables following the text of this section, company comparison data about various service parameters including installation, maintenance, switch downtime, and common trunk blocking, along with associated customer perception data.

Background

At the end of 1983, anticipating AT&T's imminent divestiture of its local operating companies, the Commission directed the Common Carrier Bureau to establish a monitoring program that would provide a basis for detecting adverse trends in network service quality. Throughout 1985, the Bureau modified the service quality reporting requirements to reduce unnecessary paperwork and to ensure that needed information would be provided in a more uniform format. The data were received semiannually, typically in March and August, and formed the basis for FCC summary reports published in June 1990 and July 1991.

With the implementation of price-cap regulation for certain local exchange carriers, the Commission made several major changes to the service quality monitoring program beginning with reports filed in 1991. First, the Commission expanded the class of companies filing reports to include non-Bell carriers subject to price-cap regulation.² Second, the Commission included service quality reports as part of the Automated Reporting Management Information System (ARMIS).³ Third, the Commission ordered significant changes to the kinds of data reported.⁴ Following these developments,

-
- 1 The last report was released December 1, 1999 (mimeo number 96662), which covered data for 1996, 1997, and 1998. In addition, trended ARMIS data, prepared in graphical form, are available on the ARMIS web site at <www.fcc.gov/ccb/armis/sq>.
 - 2 *Policy and Rules Concerning Rates for Dominant Carriers*, Second Report and Order, 5 FCC Rcd 6786, 6827-31 (1990) (*LEC Price Cap Order*) (establishing the current service quality monitoring program and incorporating the service quality reports into the ARMIS program), Erratum, 5 FCC Rcd 7664 (Com. Car. Bur. 1990), *modified on recon.*, 6 FCC Rcd 2637 (1991); *aff'd sub nom.*, *Nat'l Rural Telecom Ass'n v. FCC*, 988 F.2d 174 (D.C.Cir. 1993).
 - 3 *LEC Price Cap Order*, 5 FCC Rcd 6786, 6827-30. The ARMIS database includes a variety of mechanized company financial and infrastructure reports in addition to the quality-of-service reports. Most data are available disaggregated to a study area or state level.
 - 4 *LEC Price Cap Order*, 5 FCC Rcd 6786, 6827-30; *See Policy and Rules Concerning*

the Commission released service quality summary reports in February 1993, March 1994, March 1996, September 1998, and December 1999. Pursuant to requirements in the Telecommunications Act of 1996,⁵ the Commission reduced the frequency of the filed data from quarterly to annual submissions.⁶ In May 1997 relevant definitions were clarified further, and these changes have been reflected starting with data covering the 1997 calendar year.⁷ This section represents an early view of data filed for 2000, which are subject to revision by the companies.

Data

The source data used in preparing this section can be extracted from an online database maintained on the FCC web site at <www.fcc.gov/ccb/armis/db>. The data are also available from ITS, Inc., at (202) 857-3800. Selected paper filings are available in the FCC Reference Room at 445 12th Street, SW, Washington, D.C. 20554.

The data presented in this section summarize ARMIS 43-05 and 43-06 carrier filings for 2000 and represent an initial view of the data. The data is subject to continuing review and may be updated as problems are discovered and corrected. The tables accompanying this section highlight many of the data elements now received. Tables include data from each major holding company: the regional Bell companies, including Verizon GTE, and Sprint.⁸

Rates for Dominant Carriers, Memorandum Opinion and Order, 6 FCC Rcd 2974 (Com. Car. Bur. 1991) (*Service Quality Order*), reconsideration 6 FCC Rcd 7462 (Com. Car. Bur. 1991). Previously the Common Carrier Bureau had collected data on five basic service quality measurements from the Bell operating companies. These were customer satisfaction levels, dial tone delay, transmission quality, on time service orders, and percentage of call blocking due to equipment failure.

5 Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56 (1996 Act).

6 Orders implementing filing frequency and other reporting requirement changes associated with implementation of the Telecommunications Act of 1996 are as follows: *Implementation of the Telecommunications Act of 1996: Reform of Filing Requirements and Carrier Classifications*, Order and Notice of Proposed Rulemaking, 11 FCC Rcd 11716 (rel. Sep. 12, 1996); *Revision of ARMIS Quarterly Report (FCC Report 43-01) et al.*, Order, 11 FCC Rcd 22508 (Com. Car. Bur., rel. Dec. 17, 1996); *Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 12 FCC Rcd 8115 (rel. May 30, 1997); *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, Order, 12 FCC Rcd 21831 (Com. Car. Bur., rel. Dec. 16, 1997).

7 *Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 12 FCC Rcd 8115 (rel. May 30, 1997).

8 In February 1992, United Telecommunications Inc. became Sprint Corporation [Local Division]; and in March 1993, Sprint Corporation acquired Centel Corporation. SBC, Pacific Telesis and Ameritech facilities are shown separately despite the merger of the SBC and Pacific in April 1997 and SBC and Ameritech in October 1999. Bell Atlantic's recent merger with GTE and its new name Verizon Communications is now reflected in this report; however the GTE entities continue to be shown separately. While the data summaries in this report are

The data items summarized in the tables largely contain raw data measurements that are not scaled by company indexing processes. This removes a degree of procedural variation among companies. For example, companies file a fairly extensive amount of raw data about switching outages, including outage durations and number of lines affected.

The data summarized in this section contain sums, or weighted averages, of data reported by states or study areas and may be useful in assessing overall trends. Where information is reported in terms of percentages or average time intervals, data presented here are based on a composite of individual study area data that are calculated by weighting the percentage or time interval figures. For example, we weight the percent of commitments met by the corresponding number of orders provided in the filed data.⁹

The items contained in the tables are summarized below. Installation, maintenance and customer complaint data are shown in Table 9.1, and switch downtime and trunk servicing data are shown in Table 9.2. Installation and maintenance data are presented separately for services provided to end users and for interexchange carrier access facilities. Outage data categorized by cause are shown in Table 9.3. Customer perception data are contained in Table 9.4 and the associated survey sample sizes are contained in Table 9.5.

This section has attempted to display data elements that have remained roughly comparable over the past few years. More detailed information on the raw data from which this section has been developed is contained on the Commission's website for the ARMIS database noted above. In addition, complete data descriptions are available in the Commission Orders referenced above.¹⁰ The row numbers and columns associated with the raw source data in the ARMIS 43-05 report are included in the descriptions below.¹¹

based on ARMIS data, additional data associated with these companies have been filed with the Commission pursuant to the mergers.

9 Company composite data were typically recalculated on a consistent basis from study area data, as a number of company-supplied composites could not be confirmed. Although the companies have prepared their own company rollups, we have discovered various inconsistencies or inaccuracies in some of these company-prepared composites. We have therefore weighted data involving percentages or time intervals in order to arrive at the more consistent composite data shown in the tables and expect that the companies will want to review their procedures for preparing composites. Parameters used for weighting in this section were appropriate for the composite being calculated and were based on the raw data filed by the carriers but are not necessarily shown in the tables. For example, we calculate composite installation interval data by summing the individual study area results multiplied by the number of installation orders reported for each study area and then dividing the result by the total number of orders.

10 See footnote 6, *supra*.

11 For rows 110-121 in the raw machine readable data sets, column a or aa is the first column; for rows 130 to 151, column d or ad is the first column; for rows 180 to 190, column k or ak is the first column; for rows 200 to 214, column n or an is the first column; for rows 220 to 319 and

1. Percent of Installation Commitments Met

Percent of installations that were met by the date promised by the company to the customer. It is presented separately for residential and business customers' local service (row 132, columns f and i or af and ai, respectively) and access services provided to carriers (row 112, columns a and c or aa and ac).

2. Average Installation Interval (in days)

Average interval (in days) between the installation service order and completion of installation. It is shown separately for access services provided to carriers (row 114, column a and c or aa and ac) and for residential and business customers' local service (row 134, columns f and i or af and ai, respectively). Data on intervals for missed installations (rows 113 and 133) were replaced by average interval described above.

3. Average Repair Interval

Average time (in hours) for the company to repair access lines and service subcategories for switched access, high-speed special access, and all special access. Only data for switched and special access services provided to carriers are presented. (See row 121, column a and c or aa and ac.)

4. Initial Trouble Reports per Thousand Access Lines

Calculated as the total count of trouble reports reported as "initial trouble reports," divided by the number of access lines in thousands. (Note that multiple calls within a 30 day period known to be associated with the same problem are counted as a single initial trouble, and the number of access lines reported and used in the calculation is the total number of access

333-500, column t is the first column; and for rows 320 to 332, column aa or da is the first column. The companies also file printed copies of their submissions where rows 110-121 are designated as Table I, rows 130-170 are designated as Table II, rows 180-190 are designated as Table III, rows 200-214 are designated as Table IV, rows 220-319 and 333-500 are designated as Table IV-A, and rows 320-332 are designated as Table V. Note that some of the row numbers in the data such as rows 142, 143 and 160 do not appear in numerical order. In addition to definitional wording changes, most of which are minor, rows 111, 131, 160 and 170 (missed installations for customer reasons and subsequent trouble reports) have been added with the 1997 data; however, not all companies have populated the added rows. Many column designations have also been changed and most column labels are now preceded by the letter "a". The reader should note that there are variations in numbers of switches and access lines in the various ARMIS reports that may lead to inconsistencies when comparing data sources; however, these variations are not believed to be significant enough to alter the observations made in this section. Because the entire row and column descriptions and definitions for each year in question are too voluminous to reproduce here, the reader should refer to the relevant Commission Order referenced in a prior footnote describing requirements for the specific data year of interest.

lines divided by 1,000.) This item is subcategorized by Metropolitan Statistical Areas (MSA) (the sum of row 141, column d or ad and row 141, column g or ag divided by the sum of row 140, column d or ad and row 140, column g or ag); non-MSA (the sum of row 141, column e or ae and row 141, column h or ah divided by the sum of row 140, column e or ae and row 140, column h or ah); residence (row 141, column f or af divided by row 140, column f or af); and business (row 141, column i divided by row 140, column i or ai). Note that access lines for data filed in 1997 were requested in whole numbers, but were requested in thousands for prior years.

5. Found or Verified Troubles per Thousand Access Lines

Calculated as described in item 4, above. Represents the number of trouble reports in which the company identified a problem (row 141, column j or aj less row 143, column j or aj divided by row 140, column j or aj).

6. Repeat Troubles as a percent of Initial Trouble Reports

Calculated as the number of initial trouble reports acted on that recur, or remain unresolved, within 30 days of closing out the initial trouble report, divided by the number of initial trouble reports as described above (row 142, column j or aj divided by row 141, column j or aj). Provides a measure of the effectiveness of the company in resolving troubles at the outset. Subcategorized by MSA, non-MSA, residence, and business. (Also refer to the discussion of data qualifications that follows.)

7. Complaints per Million Access Lines

The number of residential and business customer complaints, per million access lines, reported to state or federal regulatory bodies during the reporting period. (Total residence complaints are calculated as the sum of row 331, column aa and row 332, column aa; total business complaints are calculated as the sum of row 321, column aa or da and row 322, column aa or da).

8. Number of Access Lines, Trunk Groups and Switches

The count of in-service access lines (row 140, column j or aj), trunk groups (row 180, column k or ak), and switches (the sum of row 200, column n or an and row 201, column n or an or the sum of row 210, column n or an through row 214, column n or an). Trunk groups only include common trunk groups between Local Exchange Carrier (LEC) access tandems and LEC end offices. When comparing current data herein with data in prior reports the reader should note that access lines were reported in thousands in pre-1997 data submissions. Starting with 1997 data submissions access line data was requested in whole numbers. Data for 1995 was annualized as the average of quarterly data.

9. Switches with Downtime

Number of network switches experiencing downtime and the percentage of the total number of company network switches experiencing downtime (row 210, column o or ao through

row 214, column o or ao or the sum of row 200, column o or ao and row 201, column o or ao).

10. Average Switch Downtime in Seconds per Switch

Total switch downtime divided by the total number of company network switches indicates the average switch downtime in seconds per switch. Shown for all occurrences (the sum of row 200, column p or ap and row 201, column p or ap, multiplied by 60 and divided by the sum of row 200, column n or an and row 201, column n or an) and for unscheduled occurrences greater than 2 minutes (data derived from rows 220 through 319 and rows 333 through 500, columns t through z in the source data divided by the sum of rows 200 and 201, column n or an).

11. Unscheduled Downtime Over 2 Minutes per Occurrence

Number of occurrences of more than 2 minutes in duration that were unscheduled, the number of occurrences per million access lines, the average number of minutes per occurrence, the average number of lines affected per occurrence, the average number of line-minutes per occurrence in thousands, and the outage line-minutes per access line. For each outage, the number of lines affected was multiplied by the duration of the outage to provide the line-minutes of outage. The resulting sum of these data represents total outage line-minutes. This number was divided by the total number of access lines to provide line-minutes-per-access-line, and, by the number of occurrences, to provide the line-minutes-per-occurrence. This categorizes the normalized magnitude of the outage in two ways and provides a realistic means to compare the impact of such outages between companies. A separate table is provided for each company showing the number of outages and outage line-minutes by cause. (These items are derived from data in rows 220 through 319 and 333 through 500, columns t through z, in the source data).

12. Scheduled Downtime Over 2 Minutes per Occurrence

Determined as in item 11, above, except that it consists of scheduled occurrences. (These items are derived from data contained on rows 220 through 319, and rows 333 through 500, columns t through z, in the source data).

13. Percent of Trunk Groups Meeting Design Objectives

This data item provides the percentage of trunk groups exceeding an industry standard for blocking over the reporting interval (the sum of rows 189 and 190, column k, divided by row 180, column k for 1995 data and the sum of rows 189 and 190, column ak divided by row 180 column ak starting with 1996 data). The trunk groups measured and reported are interexchange access facilities. These represent only a small portion of the total trunk groups in service.

Qualifications

The data presented in this section are a first view of this year's filed data. As in the past, we have identified several pitfalls and general qualifications in using quality of service data.

Overall, we caution readers to be aware of potential methodological shortcomings and inconsistencies associated with use of the service quality data presented in this section. First, carriers periodically revise submitted data as problems are discovered, and data presented here may contain errors or may not reflect the latest updates. Second, although the data are subject to an initial screening by Commission staff, and certain problems may have been corrected in carrier-submitted revised filings, there are still potential flaws in the data that will only become apparent when users subject the data to further analysis or compare it with data from other sources.¹²

Third, Commission staff have recalculated holding company totals or data composites, and these might not match company-filed totals or composites.¹³ This is primarily due to calculation variations regarding, *e.g.*, percentages or average intervals that require weighting in the calculations. Carriers have updated earlier filings numerous times. The data presented here typically reflect data updates to the most recent ARMIS filing of April 2001. We therefore caution the reader that some of the problems that may be discovered in connection with the data presented here resulted from differences in aggregation methodologies, errors including data irregularities, or data revisions that either could not be used or were not available in time for use in this section.¹⁴

Fourth, outage measurements should be considered in context. For example, the average number of lines affected per event would tend to favor a company with a larger number of smaller or remote switches with lower line counts per switch, while the average outage duration might favor a company with larger switches. Thus, using the average number of lines per event measurement, one 25,000 line switch that is out of service for five minutes would appear to have a greater service impact than ten 2,500 line switches that are out of service for five minutes. That is why we present a grouping of outage measurements that include the outage line-minutes per event and per 1,000 access lines. We have also added the number of outages per switch as another metric for measuring a company's performance.

12 For example, small variations between GTE prepared composites and those that we calculated independently appear to have been caused by inclusion or exclusion of data from study areas such as Micronesia (GTMC) and Alaska (GTAK).

13 Recent Commission orders have modified definitions in the data collection process in an attempt to remove perceived ambiguities. We note, however, that because this section contains many items whose composites are calculated as weighted sums or averages, we have recalculated company composites for this section to improve consistency and we have pointed out general cautions in using the data. We expect that this will be useful to the companies in their review of internal processes associated with calculation of composites and may enable us to use company-calculated composites in the future.

14 We have noted in some cases that total access lines as reported in the last column of row 140 does not agree with the sum of the first column entry of rows 320 and 330. Variations in access line and switch counts may affect normalized outage data reported in the tables. In some instances irregularities inherent in the underlying data at the study area level may have resulted in other undetected errors in the calculated composites.

Except in the calculation of company composites, we have not, in most cases, deleted or adjusted data. It is expected that the process of data correction will continue as problems are further identified and corrected.

This section presents data that reflect several different ways of measuring switch outages, including line-minutes-per-access line and line-minutes-per-event. Outage line-minutes is a measure that combines both duration and number of lines affected in a single parameter. We derived this parameter from the raw data by simply multiplying the number of lines involved in each outage by the duration of the outage, summing the resulting values and dividing the sum by the total number of access lines or events. Because outage measurements tend to exhibit more variability than other measurements, we have shown in the tables several ways of presenting the results. Improvements in responding to outages by some of the reporting companies may be associated with efforts to improve switch reliability, including working with manufacturers to replace poorly performing switches and to improve performance of existing ones.¹⁵

Because performance within any single data category may vary widely over time, evaluating a given company's performance by looking at a single measurement may be misleading, especially considering that long lead times might be needed to correct certain problems or that corrections might already be underway. On the other hand, problems that are observed in several service quality measurement categories could also reflect overall service deterioration. We believe that customer complaint and perception levels should be viewed in the context of other measures of performance. However, we have found that it is practically impossible to ascertain whether changes in aggregate customer complaint levels result from developments in a single problem area or reflect a perception of a wider ranging set of problems. For these reasons and because data is now filed annually rather than quarterly, we recommend the use of both trend and pattern analysis of the data.

Finally, one of the measurements for which service quality data are collected is the number of service affecting troubles reported by customers. Because of the various classifications of trouble reports, the Commission's May 1997 Order addressed problems relating to subtleties in the definitions associated with the terms "initial" and "repeat" trouble reports.¹⁶ This and other issues were addressed in an October 1993 Order modifying filing requirements and were the subject of further clarification and

15 GTE representatives previously expressed concerns about presentation of its outage data in this section, asserting that the raw number of outages taken out of context would result in GTE appearing worse than other companies due to the large number of small and remote switches in its territory. The use of a menu of data elements as a description of outage performance actually tends to portray performance more equitably for all companies and reduces reporting bias that would tend to result from a more limited description of the data.

16 This issue was discussed in the last report on service quality and was addressed in previous Commission orders. *See Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 12 FCC Rcd 8115, 8133 (rel. May 30, 1997); *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, Order, 12 FCC Rcd 21831, 21835 (Com. Car. Bur., rel. Dec. 16, 1997). *See also* Federal Communications Commission, Industry Analysis Division, *Quality-of-Service for the Local Operating Companies Aggregated to the Holding Company Level*, released March 22, 1996 (mimeo 60268) for further discussion.

expansion in subsequent orders leading to the reporting of a new category of trouble reports relating to follow-up inquiries.¹⁷

All of these reflections and observations essentially relate to the issue of maintaining the necessary continuity of data measurements. While an attempt has been made to preserve continuity up to this point, detection of errors and changes in reporting requirements that are deemed necessary will introduce discontinuities into certain time series data or eliminate certain items of data entirely.

We note that changes in service quality measurements may be dictated by changes in technology and that the companies periodically wish to change their internal measurement procedures, from which regulatory data are drawn, adding difficulty to long-term measurements.¹⁸ In some cases procedural changes in the data measurement and collection process may be subtle enough so that they are not immediately noticeable in the data. Significant changes in company procedures, however, usually result in noticeable and abrupt changes in data levels. It appears that at least some of these changes are not reported to the Commission. These factors tend to limit the number of years of data available to track service quality trends and will affect the frequency and availability of summary reports that are prepared by the Commission. In spite of these caveats, it appears that customer satisfaction and complaint data have exhibited adverse trends for some of the companies in recent years.

17 See *Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 8 FCC Rcd 7474, ¶ 26 and attachments (1993). See also *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, 12 FCC Rcd 21831 (introducing reporting of "subsequent" troubles).

18 For those interested in trending customer perception data in this section with that available in prior Reports it should be noted that Bell Atlantic, for example, reported changes to its customer perception surveys that were reflected in its post-1990 data, and Pacific Telesis had noted changes effective in January 1992.

10. Infrastructure

The infrastructure information contained in this report is based upon data collected by the FCC as part of its price-cap monitoring procedures.¹ This summary is intended to highlight changes in the use of technology in the local telephone company plant.

The data (ARMIS 43-07 reports²) upon which this infrastructure summary is based are filed April 1 for the previous calendar year. This infrastructure report includes data through 2000.³ The most recent data were filed in April 2001.

Background

The data items presented here summarize ARMIS Report 43-07, which is filed by local exchange carriers subject to mandatory price-cap regulation. The information contained in this report is for the years 1991 through 2000.

The ARMIS 43-07 reports are filed only by those local exchange companies originally subject to mandatory price-cap regulation--the Bell operating companies (BOCs).⁴ Together, these large companies provide service to more than 90% of the nation's telephone lines. The data are generally filed at the study area level, which typically consists of a company's operations within a state. The state-by-state data are available from the Commission's ARMIS web page at <www.fcc.gov/ccb/armis/db/>.

The information summarized in this report is organized into two tables: Table 10.1 shows switching system data and gross plant expenditures covering all types of plant. Table 10.2 shows transmission system data. Each table contains segments for each of the regional Bell operating companies (along with Verizon's GTE companies shown separately) with aggregated summary data for all the reporting companies. The data summarized for each holding company reflect the aggregate of data filed for individual states or study areas and should be useful in assessing overall trends. In some

1 These procedures were established in CC Docket No. 87-313.

2 ARMIS, an acronym for Automated Reporting Management Information System, is a publicly available repository of financial, plant, demand, and quality-of-service data. Additional infrastructure data are contained in the ARMIS 43-08 report. See *Statistics of Communications Common Carriers*, published annually by the FCC's Industry Analysis Division for a compilation of 43-08 infrastructure data.

3 *Infrastructure of the Local Operating Companies Aggregated to the Holding Company Level*, released April 24, 1994 for data for the years 1989 and 1990. Those early years have not been included in this report because some of the data apparently contain discrepancies and are inconsistent with the later years. Reports containing data for the early years can be found in the infrastructure section of the **FCC-State Link** Internet site at www.fcc.gov/ccb/stats under the file names INFRA99.ZIP, INFRA98.ZIP, INFRA95.ZIP, and INFRA93.ZIP.

4 *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, 5 FCC Rcd 6786 (1990) (LEC Price Cap Order), *Erratum*, 5 FCC Rcd 7664 (1990), and 8 FCC Rcd 7474 (1993).

cases, refiled data may cause values to differ from prior summary reports. Current data reflect mergers of GTE and Bell Atlantic, which are under the new name Verizon Communications, and the acquisitions by SBC of Ameritech and Pacific Telesis.

Description of the Technologies and Analysis of the Data

The data in the attached tables provide a historical series for a variety of plant elements that illustrate the deployment of technology in the networks of the major local exchange carriers.⁵ The data items provide a picture of the technologies currently in use. For example, although the issue of fiber in the local loop has gained a great deal of attention because of its potential for facilitating development of wideband video services, the progression of lower data-rate digital technologies to greater numbers of customers through an increased use of digital local access has been occurring for some time. Both switching and transmission technologies provide the building blocks that make this possible. In the switch, Signaling System 7 (SS7) provides a means for networks and interoffice switches to communicate with each other. This system uses separate digital links outside the voice channel to accomplish this. Other elements in the data relating to equal access switches and touch-tone capable switches show that nearly all switches now are equipped for both equal access and touch-tone dialing.

A useful overall measure of company activity is the dollar amount of total gross capital expenditures, which increased about 9% over the past two reporting periods. The data reported includes all plant additions on both switching and transmission facilities motivated by modernization, replacement and growth.⁶ Total gross capital expenditures should therefore continue to be an important overall parameter in assessing deployment of infrastructure in the local service business. Because construction expenditures may ultimately affect quality of service levels, broad long-term changes in the relationship between construction expenditures and access line growth should be of continued interest.

Although there is considerable interest in digital switching, the term "digital switch" by itself is often misleading and does not address the important issues of switching capability and modularity which allows for lower-cost upgrading and capacity expansion. For example, while most network switches are currently classified as digital stored-program-controlled-switches, this classification by itself does not indicate whether the switch has ISDN or SS7 capability and does not address the issue of modularity that allows lower-cost expansion. Because there are multiple capabilities that may be available in modern digital switches, assessment of digital switching proliferation requires one to look at more than a single statistic. While there are no across-the-board relationships between modularity and switch capability, many of the switches with ISDN capability also tend to be modular in design and can often be upgraded with software that can facilitate lower-cost expansion. ARMIS data currently collected

5 A number of irregularities including several time series anomalies were noted in the data. Not all data revisions were available in time for inclusion in this report. GTE indicates that at least some of the discrepancies have resulted from system changes made to its data collection systems over the past year. BellSouth indicates that ISDN capable line data (row 490) reflects a change in methodology. Prior data was based on equipped central office pairs. Data for 1999 is based on working lines.

6 The data is provided as a single number in the ARMIS 43-07 report and includes additions to plant accounts 2110, 2210, 2220, 2230, 2310, 2410, 2680, and 2690.

only cover circuit switches that provide a dedicated path through the network for the duration of a call, not routers or switches that are used in connection with frame relay, ATM and internet services that are specifically designed to handle data packets or bursts.

ISDN technology provides the service protocols and channel designations for digital services to customers and can convey voice, computer data or compressed video. Basic-rate ISDN services are provided as two 64-kilobit data channels and one 16-kilobit control channel associated with each basic-rate access line. The control channels allow the transfer of special information between the switch and the customer, unavailable with in-band signaling, as well as advanced network-control features currently used in a number of enhanced services. Primary rate ISDN provides the capacity of twenty-three 64-kilobit data channels and one 64-kilobit control channel. Availability of the service is significant and expanding, and newer services are now available that offer broadband digital capability using special terminal equipment that enhances the capability of existing copper access lines.⁷ Readers interested in more disaggregated information may wish to examine data at a more localized level than presented here.⁸

In the aggregate, there was a very small change in the number of ISDN-capable switches over the past couple of years. The number of ISDN-capable switches has doubled since 1994 and has gone up more than five-fold since 1991 but now with the availability of xDSL access technologies ISDN appears to be growing much more slowly.⁹ Although switch capabilities and modularity tend to vary by vendor, these switches tend to be better able to deal with the changing characteristics of telecommunication traffic.¹⁰

7 These services are generally referred to as xDSL (Digital Subscriber Loop) services. Limited data on the proliferation of xDSL terminal equipment by incumbent carriers are contained in Table 8 of the Industry Analysis Division's most recent *Fiber Deployment Update*, released September 9, 1999.

8 Individual study-area data are also available to address more localized issues. This information is available on the ARMIS web page at <www.fcc.gov/ccb/armis/db/>.

9 The companies can promote network modernization with the systematic growth of high bandwidth services by attracting new customers to digital services with a wider range of digital consumer choices at a variety of data rates and cost. In many areas customers are presently choosing DSL service over lower bandwidth ISDN services. This suggests a possible benefit of reducing ISDN service pricing relative to DSL to further stimulate demand for digital service offerings, which would tend to motivate companies toward greater investment to modernize their loop plant infrastructure. As competitive alternatives emerge and technology improves, prices for all data services (including ISDN) should decrease, further increasing demand and allowing greater penetration of digital facilities in less urbanized areas. New lower-priced service offerings at ISDN data rates could, for example, include a lower cost entry-level non-switched digital service geared to Internet users.

10 Continuing changes in demand patterns for new access lines, and in the character of telephone traffic from pure voice traffic to a changing mix of voice and data, underscore the desirability of targeted improvement to the switching infrastructure. Use of easily upgradeable switching systems will be increasingly important.

The companies typically report the number of access lines that can be connected to ISDN service within each wire center or switch. Because ISDN is a digital service, it is equipped to handle communication between computers without the need to first convert the signal to an analog form. Early on it was primarily marketed as a medium for enhanced voice services and was primarily targeted to business users. It has become an increasingly attractive alternative for residential customers and small businesses needing a second line for a computer, and therefore its pricing in relation to the cost of two analog lines can significantly affect proliferation of the service. Not all local loops are capable of ISDN or higher rate digital operation. Thus, information on lines capable of handling ISDN data rates was added to the ARMIS 43-07 filing requirements starting with end-of-year 1997 data. This data will be helpful in assessing the capability of existing incumbent carriers to provide basic digital services and is included with this year's summary.

Many of the companies had installed digital switches in response to the equal-access requirements of divestiture. Today, nearly 100% of the Bell company switching entities have equal-access. Although 98% of the BOCs' switches are digital stored-program-controlled switches, only about one-third have ISDN capability. The companies generally have been responding to increased interest in ISDN service and internet use by replacing or upgrading existing switches for ISDN capability.¹¹

A number of transmission elements are included in the tables. These illustrate the rapid development of fiber capacity in terms of terminations, sheath kilometers, and links. The number of sheath kilometers of fiber has more than doubled from 1991-2000, with about 600,000 fiber sheath kilometers being reported in 2000. The number of sheath kilometers of copper has remained steady at somewhat over 5 million and other sheath data, in relative terms, are not significant.

Table 10.2 also highlights the relative magnitude of equipped and working channels, providing an indication of termination equipment utilization. In both cases, copper has grown between 15% and 20% from 1991 to 2000, whereas fiber has increased over eight-fold. For interoffice carrier links, analog technologies have mostly disappeared, and all but a small portion are now provided over fiber. Although data on links and channels show that circuits connecting local central offices could typically be provided on only two fibers, the economics of fiber deployment have resulted in deployments of typical fiber cables containing more than 40 fibers. This suggests that there is a significant amount of fiber capacity currently unused in the *interoffice* transmission plant.¹²

11 New marketing, pricing and regulatory approaches designed to promote greater ISDN use by smaller business and residential customers will also promote the use of broadband capabilities and result in improvements to the local infrastructure.

12 A large portion of the cost of fiber deployment is associated with labor and installation rather than with the cable itself. Thus, the incremental cost of installing a larger fiber cable is typically relatively small. This suggests that the sheath-kilometer parameter shown in the attached tables may be a better measure of fiber coverage than fiber kilometers. In general, care should be exercised in interpreting aggregate fiber data when determining, for example, whether fiber is concentrated in certain parts of a company's service area with relatively little fiber elsewhere. See *FCC Fiber Deployment Update - End of Year 1998*, released September 9, 1999.

Although the overall level of growth in fiber has been high, its use in the local loop at present is relatively small. The listed companies had an installed base of about 217 million copper-pair mainframe terminations in their central offices for local loop use in 2000. About 2.9 million fiber terminations had been installed by end-of-year 2000. The data show that growth in central office fiber terminations increased about 32% during 2000 as compared to about 9% in 1999 following significant growth in DS-3 terminations on fiber facilities. Over the longer term, fiber and hybrid copper/fiber systems will likely become increasingly important in the local loop as the number of high-quality copper pairs available to support higher data rate digital services declines.

11. Revenues, Expenses, and Investment

This section provides information on revenues, expenses, and investment by major local telephone companies. The information included in this section is calculated from some of the summary information in the Commission's Automated Management Information Systems' (ARMIS) 43-01 Reports. The original data plus more detailed data can be found in the ARMIS 43-01 Reports. These reports along with the other nine ARMIS reports are available for public inspection on the ARMIS Internet site at <www.fcc.gov/ccb/armis/db>.

The source of the data in this section is the ARMIS 43-01, Annual Summary Report, prescribed for every incumbent local exchange carrier with operating revenues in 1998 in excess of \$114 million. The report is filed on a study area basis and includes data on revenues, expenses, and investment to enable the Commission to monitor the carriers' operations.¹ For this section, information was derived from ARMIS 43-01 data for 1999² and 2000 for the following tables:

Table 11.1 - Revenues and Other Operating Items.

Table 11.2 - Expenses and Taxes.

Table 11.3 - Gross Investment.

Table 11.4 - Total Investment Reserves (Row 1890 of the ARMIS 43-01 Report).

Table 11.5 - Net Income (which is the difference between Table 11.1, Revenues and Other Operating Items, and Table 11.2, Expenses and Taxes).

Table 11.6 - Average Net Investment (Row 1910 of the ARMIS 43-01 Report which is the difference between Table 11.3, Gross Investment, and Table 11.4, Total Investment Reserves).

Table 11.7 - Total Operating Revenues (Row 1090 of the ARMIS 43-01 Report).

Table 11.8 - Other Operating Income or Loss (Row 1290 of the ARMIS 43-01 Report).

Tables 11.7 and 11.8 show the detailed items that when aggregated constitute Table 11.1, Revenues and Other Operating Items.

Table 11.9 - Total Operating Expenses (Row 1190 of the ARMIS 43-01 Report).

Table 11.10 - Total Non-operating Items (Row 1390 of the ARMIS 43-01 Report).

1 11 Tier 1 carriers furnished the data used in this report for 127 study areas in 1999 and 119 study areas in 2000. About the time that GTE merged with Bell Atlantic to form Verizon, they sold 8 study areas to non-Tier 1 carriers. The data covers all 50 states (except Alaska), the District of Columbia, and the Commonwealth of Puerto Rico. Smaller carriers that, in the aggregate, serve about 7% of the nation's telephone lines do not file ARMIS data.

2 The 1999 data reported here includes revisions and corrections from the values previously reported for 1999.

Table 11.11 – Taxes -- Federal, State, and Other (Rows 1490, 1590, and 1595 of the ARMIS 43-01 Report).³ Tables 11.9 through 11.11 show the detailed items that when aggregated constitute Table 11.2, Expenses and Taxes.

Table 11.12 - Total Plant Investment (Row 1690 of the ARMIS 43-01 Report).

Table 11.13 - Total Other Investments (Row 1790 of the ARMIS 43-01 Report). Tables 11.12 and 11.13 show the detailed items that when aggregated constitute Table 11.3, Gross Investments.

Each table in this section contains columns headed “Subject to Separations”, “Intrastate”, and “Interstate”.⁴ The “subject to separations” column reflects the total amount that is subject to separations allocations between the state and interstate jurisdictions pursuant to Part 36 of the Commission’s Rules. The “interstate” and “intrastate” columns reflect the amounts allocated to the interstate and state jurisdictions pursuant to those rules. In some instances, the “interstate” column also reflects FCC prescribed adjustments made after the separations process. These adjustments are made only at the interstate level; consequently, the “intrastate” and “interstate” columns may not necessarily add up to the “subject to separations” column.

Each table also contains a column headed “Percent Interstate”. The data in this column is calculated by dividing the data in the “interstate” column by the data in the “subject to separations” column.

Table 11.6 - Average Net Investment - has one additional column headed “Interstate Rate of Return”. The data in this column is calculated by dividing the data in the “interstate” column of Table 11.5 - Net Income - by the data in the “interstate” column of Table 11.6.

3 Beginning in 1999, mid-sized companies (incumbent carriers other than the Bell operating companies and GTE subsidiaries) no longer report taxes to different governments separately. Therefore, Table 11.11 shows the sum of rows 1490 and 1590 for the Bell operating companies and GTE subsidiaries and row 1595 for the mid-sized companies.

4 These are reported in columns (f), (g), and (h) in the ARMIS 43-01 Reports. The numbers are in thousands of dollars.

Customer Response

Publication: Monitoring Report
 Spring 2001

You can help us provide the best possible information to the public by completing this form and returning it to the Industry Analysis Division of the FCC's Common Carrier Bureau.

1. Please check the category that best describes you:

- press
- current telecommunications carrier
- potential telecommunications carrier
- business customer evaluating vendors/service options
- consultant, law firm, lobbyist
- other business customer
- academic/student
- residential customer
- FCC employee
- other federal government employee
- state or local government employee
- Other (please specify) _____

2. Please rate the report: Excellent Good Satisfactory Poor No opinion

Data accuracy	(_)	(_)	(_)	(_)	(_)
Data presentation	(_)	(_)	(_)	(_)	(_)
Timeliness of data	(_)	(_)	(_)	(_)	(_)
Completeness of data	(_)	(_)	(_)	(_)	(_)
Text clarity	(_)	(_)	(_)	(_)	(_)
Completeness of text	(_)	(_)	(_)	(_)	(_)

3. Overall, how do you rate this report?

Excellent	Good	Satisfactory	Poor	No opinion
(_)	(_)	(_)	(_)	(_)

4. How can this report be improved?

5. May we contact you to discuss possible improvements?

Name:
 Telephone #:
