

Atlantic Shark Commercial Fishery Update

Below are the preliminary landings estimates in metric tons (mt) and pounds (lb) dressed weight (dw) for the Atlantic Shark commercial fisheries January 1, 2009, through January 31, 2009. These preliminary landings estimates include landing reports received through January 31, 2009. The landings presented below are total landings reported through the Pelagic Dealer Compliance (PDC) (previously known as the Quota Monitoring System), and the Accumulated Landings System (ALS) (previously known as the general canvass). Landings within the shark research fishery were determined from trip tickets provided to the National Marine Fisheries Service (NMFS) by scientific observers. The estimates include landings by state-only permitted vessels, federally permitted vessels, and the 2009 shark research fishery participants. Due to the privacy regulations of North Carolina (NC), NMFS is unable to remove all instances where NC dealers report in both the PDC and ALS. As a result, some NC landings may be inflated. NMFS reminds fishermen and dealers that they are required to identify all landed sharks to species.

In the final rule that established the 2009 Atlantic shark fishing quotas (73 FR 79005, December 24, 2008), NMFS accounted for an overharvest of porbeagle sharks of 0.3 mt dw (601 lb dw) and established a 2009 porbeagle shark adjusted annual quota of 1.4 mt dw (3,147 lb dw). As of January 31, 2009, reports indicated that an additional 0.2 mt dw (422 lb dw) of porbeagle sharks had been landed in 2008. NMFS will account for this additional overharvest in the 2010 Atlantic shark season rule and will adjust the 2010 porbeagle shark annual quota accordingly.
