

X Rock cairn
top of knob

Anomalous values (in ppm) of tungsten (W), lead (Pb), zinc (Zn), and silver (Ag) indicated below sample number. Anomalous values determined from visual evaluation of histograms of all soil samples from project area. Analyses for tungsten by colorimetry, all others by atomic absorption. Additional analyses for these samples listed in appendixes B and D.

Anomalous values (ppm)

- W ≥ 20
- Pb ≥ 80
- Zn ≥ 180
- Ag ≥ 5 (detection limit)
