**Subject:** Re: OUO [Q CONSULTING]

Rich,

The sentence below is correct and represents a key planning objective to solve the parking needs along the Pajarito Road corridor.

Kirt,

As I mentioned in my voice message of a few minutes ago, we are avoiding the use of OUO and classified references in the SWEIS. If you would, please send me an email with the below (which is the same as that currently in the Draft SWEIS except for the beginning up to (but not including) the word "new") that,

"For planning or analysis purposes, assume that new surface parking additions or modification of existing parking would be constructed to accommodate approximately 1,100 cars at TA-63. The parking would be built in two phases, with approximately 450 parking spaces built in the first phase."

I'll then change the reference from "Q Consulting" to "LANL 2006." The latter is what we use for all email and telephone references.

Don't hesitate to contact me if you have any questions concerning this matter.
