Fish and Wildlife Service Status

The table below denotes categories defined in the U.S. Fish and Wildlife Service Notice of Review (1980, 1983, 1985, 1990, 1993, 1996) and indicate the status of a taxon under the federal Endangered Species Act of 1973 (16 U.S.C.A. § 1531-1543 (Supp. 1996)).

The Endangered Species Act defines endangered and threatened as the following:

"The term 'endangered species' means any species which is in danger of extinction throughout all or a significant portion of its range other than a species of the Class Insecta determined by the Secretary to constitute a pest whose protection under the provisions of this chapter would present an overwhelming and overriding risk to man."

"The term 'threatened species' means any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range."

BASIC FEDERAL STATUS DESIGNATIONS

LE = Listed Endangered

Species for which a final rule has been published in the Federal Register to list the species as endangered. Species is legally protected by the Endangered Species Act.

LT = Listed Threatened

Species for which a final rule has been published in the Federal Register to list the species as threatened. Species is legally protected by the Endangered Species Act.

PE = Proposed Endangered

Species for which a proposed rule has been published in the Federal Register to list the species as endangered

PT = Proposed Threatened

Species for which a proposed rule has been published in the Federal Register to list the species as threatened.

CN = Candidate for Listing

Substantial information exists in U.S. Fish and Wildlife Service files on biological

vulnerability to support proposals to list as endangered or threatened.

SC = Species of Concern

The terms "Species of Concern" or "Species at Risk" should be considered as terms-of-art that describe the entire realm of taxa whose conservation status may be of concern to the US Fish and Wildlife Service, but neither term has official status (currently all former C2 species).

PDL = Proposal for delisting

Species for which a final rule has been published in the Federal Register to delist the species.

XN = Non-essential Experimental Population

Species for which a population has been artificially established in the wild which is not essential to the survival of the species in the wild.

T(S/A) = Listed as Threatened Due to Similarity of Appearance

??

Note:

The categories C2, and subcategories 3B and 3C are no longer maintained by the USFWS (61 FR 7596, Feb. 28, 1996).

MORE COMPLICATED FEDERAL STATUS DESIGNATIONS

The taxonomic relationships between species and their infraspecific taxa may determine whether a taxon has federal protection. Section 17.11(g) of the Endangered Species Act states, "the listing of a particular taxon includes all lower taxonomic units." Also, if an infraspecific taxon or population has federal status, then by default, some part of the species has federal protection. Our data for some taxa show values indicating Federal status even though the element may not be specifically named in the Federal Register. Where status is implied due to a taxonomic relationship alone, the status abbreviation appears in parentheses.

Federal status has been assigned to some vertebrate populations which are defined by geopolitical boundaries (i.e., the status applies to the element only within those boundaries, even though the range of the element may extend beyond the boundaries), or to populations which are administratively defined (e.g., experimental populations). Since these populations do not have individual entries in our database, the Federal status is recorded for the species or subspecies to which that population belongs. In these cases, the status abbreviation appears in parentheses, after the abbreviation "PS" for "partial status" - indicating that the status applies only to a portion of the species' range.

Value, Value

The taxon has one status currently, but a more recent proposal has been made to change that status with no final action yet published. For example, "LE, PDL" indicates that the species is currently listed as endangered, but has been proposed for delisting.

(Value)

The taxon itself is not named in the Federal Register as having Federal status; however, it does have Federal status as a result of its taxonomic relationship to a named entity. For example, if a species is federally listed with endangered

status, then by default, all of its recognized subspecies also have endangered status. The subspecies in this example would have the value "(LE)" under Federal Status. Likewise, if all of a species' infraspecific taxa (worldwide) have the same Federal status, then that status appears in the record for the "full" species as well. In this case, if the taxon at the species level is not mentioned in the Federal Register, the status appears in parentheses in that record.

(Value, Value)

The taxon itself is not named in the Federal Register as having Federal status; however, all of its infraspecific taxa (worldwide) do have official status. The statuses shown in parentheses indicate the statuses that apply to infraspecific taxa or populations within this taxon.

(PS)

Indicates "partial status" - status in only a portion of the species' range. Typically indicated in a "full" species record where an infraspecific taxon or population has Federal status, but the entire species does not.

(PS; Value)

Indicates "partial status" - status in only a portion of the species' range. The value of that status appears because the entity with status (usually a population defined by geopolitical boundaries or defined administratively, such as experimental populations) does not have an individual entry in NM.

State Status Designations

New Mexico has separate provisions for endangered plants and animals. The New Mexico Department of Game and Fish, through its Conservation Services Division, administers the Wildlife Conservation Act. (NMSA 1978 § 17-2-37 et seq.) The Act requires the listing of any species or subspecies of "wildlife indigenous to the state" as endangered or threatened on the basis of investigations and other scientific and commercial data, and after consultation with wildlife agencies in other states, federal agencies, local and tribal governments, and other interested persons and organizations.

The Forestry Division of the Energy, Minerals and Natural Resources Department (EMNRD) administers the Endangered Plant Species Act, passed in 1985. (NMSA 1978 § 75-6-1). This Act acknowledges only one status, "Endangered." Other plant status designations listed below have no formal status. These are, furthermore, currently outdated. As a group they have been replaced by the New Mexico Rare Plant Technical Council Species of Concern List and Taxa Considered But Not Listed List. We will have our state status designations for plants updated in our database soon.

STATE STATUS DESIGNATIONS FOR ANIMALS

E = Endangered

Any species or subspecies whose prospects of survival or recruitment in New Mexico are in jeopardy.

T = Threatened

Any species or subspecies that is likely to become endangered within the foreseeable future throughout all or a significant portion of its range in New Mexico.

STATE STATUS DESIGNATIONS FOR PLANTS

E = Endangered

Any plant species whose prospects of survival within the state are in jeopardy or are likely, within the foreseeable future, to become jeopardized.

S = Sensitive (Informal)

Any plant taxon that is considered to be rare because of restricted distribution or low numerical density.

R = Review List (Informal)

Any plant taxon about which more information is needed. The species is either

taxonomically questionable or poorly understood as to distribution or endangerment.

D = Dropped List(Informal)

Taxa considered , but not included on above lists; or taxa delisted from previous lists.
