

Air Trends

Under the Clean Air Act, EPA establishes air quality standards to protect public health and the environment. EPA has set national air quality standards for six principal air pollutants. These include:

- carbon monoxide,
- lead,
- nitrogen dioxide,
- ozone,
- particulate matter (also known as particle pollution), and
- sulfur dioxide.

Each year EPA tracks the levels of these pollutants in the air and how much of each pollutant (or the pollutants that form them) is emitted from various pollution sources. These numbers are looked at year after year to see how the pollutants have changed over time. EPA posts the results of our analyses to this web site.

[Basic Information⁴](#) - Information about air quality standards for the six principal air pollutants, also called criteria pollutants

- Carbon Monoxide (CO)⁵
- Ground-level Ozone (O₃)⁶
- Lead (Pb)⁷
- Nitrogen Dioxide (NO₂)⁸
- Particulate Matter (PM)⁹
- Sulfur Dioxide (SO₂)¹⁰

[Where You Live¹¹](#) - View local-area air trends for the six principal air pollutants

[Air Trends Reports¹²](#) - View and download current and past Air Trends Reports, EPA's "report card" on the status of air quality and air pollutant emissions

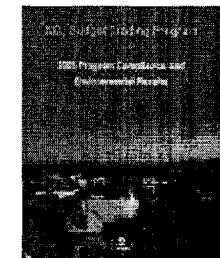

[Special Studies¹³](#) - Links to special study topics regarding policy-relevant information related to air quality trends

[Air Quality Data¹⁴](#) - Air quality data and statistics for cities and counties available in PDF and XLS format

[Design Values¹⁵](#) - Statistics that describe the air quality status of a given area relative to the level of EPA's National Ambient Air Quality Standards¹⁶

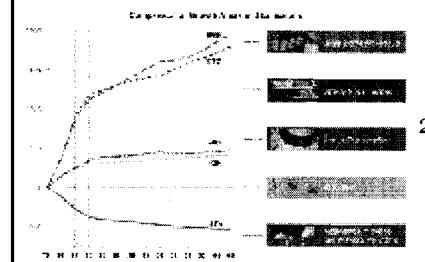

[Acronyms¹⁷](#) - A list of common acronyms used throughout the Air Trends site

The report [NOx Budget Trading Program, 2005 Program Compliance and Environmental Results¹](#), analyzes the effectiveness ¹ of control programs designed to reduce emissions that contribute to formation of ground-level ozone. The report focuses on 2005 progress made in reducing NOx emissions in the eastern United States.

Air Emissions Trends - Continued Progress Through 2005.

Emissions causing poor air quality across the U.S. have declined since 1970 while we have experienced significant economic growth. More Information...²

The report [Evaluating Ozone Control Programs in the Eastern United States: Focus on the NOx Budget Trading Program, 2004³](#), analyzes the effectiveness ³ of control
