**Subject:** FW: Status of the Bayo Wastewater Treatment Plant

Mr. Gorden,

The new Los Alamos Wastewater Treatment Plant went into full operation on October 3, 2007. The Bayo wastewater plant last discharged on October 4. We are now in the process of removing equipment and abandoning the facilities at Bayo. Before demolition, we must also arrange for remediation of some asbestos containing materials from some of the plant structures. Full demolition is scheduled for approximately two years from now. I hope this is the information you are looking for. If you have any further questions, please call me at 662-8148.

**Subject:** Status of the Bayo Wastewater Treatment Plant

I am updating an environmental impact statement, *Final Site-Wide EIS for Continued Operation of Los Alamos National Laboratory, Los Alamos, New Mexico*, before it is issued to the public. In the cumulative impacts section, we mention that the Bayo Wastewater Treatment Facility is being replaced by an advanced wastewater treatment facility in Pueblo Canyon, with construction to be completed in 2007.

Can you provide me with a short update as to whether construction has been completed, if the Bayo facility has been removed from service, and is the Bayo facility currently being demolished?

Thank you in advance for your attention. If you need further information, don't hesitate to contact me.

Milton Gorden
