THE UNITED STATES INTERNATIONAL TRADE COMMISSION

In the Matter of:)
) Investigation Nos.:
SILICON METAL FROM) 731-TA-471 and 472
BRAZIL AND CHINA) (Second Review)

Tuesday,
September 19, 2006

Room No. 101
U.S. International
Trade Commission
500 E Street, S.W.
Washington, D.C.

The hearing commenced, pursuant to notice, at
9:32 a.m., before the Commissioners of the United States
International Trade Commission, the Honorable DANIEL R.
PEARSON, Chairman, presiding.

APPEARANCES:

On behalf of the International Trade Commission:

Commissioners:

DANIEL R. PEARSON, CHAIRMAN
SHARA L. ARANOFF, VICE CHAIRMAN
JENNIFER A. HILLMAN, COMMISSIONER
STEPHEN KOPLAN, COMMISSIONER
CHARLOTTE R. LANE, COMMISSIONER

APPEARANCES: (Cont'd.)

Staff:

MARILYN R. ABBOTT, SECRETARY TO THE COMMISSION
 WILLIAM R. BISHOP, HEARINGS AND MEETINGS
 COORDINATOR
 SHARON D. BELLAMY, HEARINGS AND MEETINGS ASSISTANT
 KAREN TAYLOR, INVESTIGATOR
 JACK GREENBLATT, INDUSTRY ANALYST
 AMELIA PREECE, ECONOMIST
 CHARLES YOST, ACCOUNTANT/AUDITOR
 RHONDA HUGHES, ATTORNEY
 GEORGE DEYMAN, SUPERVISORY INVESTIGATOR

In Support of Continuation of Antidumping Orders:

On behalf of Globe Metallurgical, Inc.:

ARDEN C. SIMS, President and CEO, Globe
 J. MARLIN PERKINS, Vice President, Sales, Globe
 KENNETH R. BUTTON, Senior Vice President, Economic
 Consulting Services, LLC
 JENNIFER LUTZ, Senior Economist, Economic
 Consulting Services, LLC

 WILLIAM D. KRAMER, Esquire
 MARTIN SCHAEFERMEIER, Esquire
 DLA Piper US LLP
 Washington, D.C.

In Opposition to Continuation of Antidumping Duty
 Orders:

On behalf of Ligas de Alumínio S.A. (LIASA); Companhia
 Ferroligas Minas Gerais Minasligas; Camargo Correa
 Metais S.A. (CCM); Associação Brasileira dos Produtores
 de Ferroligas e de Silício Metálico (ABRAFE):

ADELMO J. MELGACO, Executive Director, ABRAFE
 ROBERT J. MC HALE, Vice President, Metal
 Procurement, Alcoa, Inc.

 LYLE B. VANDER SCHAAF, Esquire
 JOSEPH H. HECKENDORN, Esquire
 Bryan Cave LLP
 Washington, D.C.

P R O C E E D I N G S

(9:32 a.m.)

1
2
3 CHAIRMAN PEARSON: Good morning. On behalf
4 of the U.S. International Trade Commission I welcome
5 you to this hearing on Investigation Nos. 731-TA-471
6 and 472 (Second Review) involving Silicon Metal From
7 Brazil and China.

8 The purpose of these second five-year review
9 investigations is to determine whether revocation of
10 the antidumping duty orders covering silicon metal
11 from Brazil and China would be likely to lead to
12 continuation or recurrence of material injury to an
13 industry in the United States within a reasonably
14 foreseeable time.

15 I note for the record that in Memorandum
16 C076-DD-001 dated February 27, 2006, Commissioner Okun
17 recused herself from these second review
18 investigations and is therefore not participating in
19 today's proceedings.

20 Notices of investigation for this hearing,
21 lists of witnesses and transcript order forms are
22 available at the Secretary's desk. I understand that
23 parties are aware of the time allocations. Any
24 questions regarding the time allocations should be
25 directed to the Secretary.

Heritage Reporting Corporation
(202) 628-4888

1 As all written material will be entered into
2 the record in full it need not be read to us at this
3 time. Parties are reminded to give any prepared
4 testimony to the Secretary. Please do not place
5 testimony directly on the public distribution table.

6 All witnesses must be sworn in by the
7 Secretary before presenting testimony. Finally, if
8 you will be submitting documents that contain
9 information you wish classified as business
10 confidential your requests should comply with
11 Commission Rule 201.6.

12 Mr. Secretary, are there any preliminary
13 matters?

14 MR. BISHOP: No, Mr. Chairman.

15 CHAIRMAN PEARSON: Very well. Let us
16 proceed with opening remarks.

17 MR. BISHOP: Opening remarks on behalf of
18 those in support of continuation of the orders will be
19 given by William D. Kramer, DLA Piper.

20 CHAIRMAN PEARSON: Welcome, Mr. Kramer.
21 Please proceed.

22 MR. KRAMER: These are the second sunset
23 reviews of the antidumping orders covering imports of
24 a product well-known to the Commission, silicon metal.
25 As the Commission knows from its prior investigations

1 and the current reviews, silicon metal is a price-
2 sensitive commodity product.

3 These reviews cover two countries, Brazil
4 and China. Both of these countries have large, highly
5 export oriented silicon metal industries, and both
6 have a history of selling large volumes of silicon
7 metal at low prices in the United States and other
8 export markets.

9 For both countries, the Department of
10 Commerce has found that the subject suppliers would
11 dump silicon metal in the United States at very high
12 margins of dumping -- over 90 percent for Brazil and
13 over 139 percent for China -- if the orders were
14 revoked.

15 China is widely acknowledged to be an
16 extremely aggressive supplier of silicon metal with
17 enormous capacity whose exports to the United States
18 would have a devastating impact on the domestic
19 industry if the Chinese order were revoked.

20 The Brazilian subject industry is not as
21 large as the Chinese industry. However, the capacity
22 of the Brazilian producers that remain subject to the
23 order is large in comparison to the United States
24 industry and other industries globally. That is so
25 without considering the capacity of RIMA, which

1 currently is not covered by the order, but is the
2 subject of a request that the Department of Commerce
3 reinstate the order based on resumed dumping.

4 Moreover, the subject Brazilian producers
5 are even more export oriented than the Chinese
6 producers and are formidable suppliers of low-priced
7 silicon metal.

8 The Commission should cumulate the volume
9 and effects of silicon metal imports from Brazil and
10 China in these reviews as it did in the original
11 investigations and the first sunset reviews. Under
12 the statutory criteria it is clear that there would be
13 more than a reasonable overlap of competition between
14 the imports from both sources and domestic silicon
15 metal.

16 In addition, there are no differences in the
17 conditions of competition between the subject imports
18 from Brazil and China that would warrant a decision
19 not to cumulate. Indeed, the conditions of
20 competition for both countries are virtually the same.

21 There is extensive evidence in the record of
22 these reviews showing that Brazil and China would each
23 export substantial quantities of silicon metal to the
24 United States at low prices that would undercut
25 domestic producer prices and cause material injury to

1 the domestic industry if the orders were revoked.

2 Before the orders were imposed, suppliers
3 from both countries exported large and rapidly
4 increasing volumes of silicon metal to the United
5 States at low and declining prices that inflicted very
6 serious injury on the domestic industry. Brazil was
7 the largest source of the preorder surge of dumped
8 imports. Postorder developments also confirm that
9 substantial renewed flows of injurious dumped imports
10 would reenter the U.S. market if the orders were
11 revoked.

12 With respect to Brazil, the postorder
13 evidence includes, among other things, the large surge
14 in U.S. imports from the two companies that are not
15 currently subject to the order, RIMA and CBCC, after
16 the order was revoked as to those companies, as well
17 as the conduct of the Brazilian producers in the EU
18 and Japanese markets and in other North American
19 markets in which they compete.

20 In the case of both countries, revocation of
21 the orders would result in large and increasing
22 volumes of dumped imports, pervasive underselling,
23 lost sales and price declines in the U.S. silicon
24 metal market that would cause very serious injury to
25 the domestic industry.

1 These negative effects of revocation would
2 be particularly grave because of the vulnerability of
3 the U.S. industry to injury by unfairly traded
4 imports. The industry has a history of severe
5 financial losses, furnace shutdowns, bankruptcies,
6 consolidations and other serious setbacks.

7 The industry's vulnerability to injury by
8 unfair imports can be seen both in the preorder impact
9 of the dumped imports from Brazil and China and in the
10 impact of the recent influx of dumped imports from
11 Russia.

12 For all of these reasons, maintaining the
13 Brazil and China orders in place is critical for the
14 continued viability of the U.S. silicon metal
15 industry.

16 MR. BISHOP: Opening remarks on behalf of
17 those in opposition to the continuation of the orders
18 will be given by Lyle B. Vander Schaaf, Bryan Cave.

19 CHAIRMAN PEARSON: Welcome, Mr. Vander
20 Schaaf. Please proceed.

21 MR. VANDER SCHAAF: Thank you. Good
22 morning. I am accompanied here today by my colleague,
23 Joe Heckendorn from Bryan Cave. We are here on behalf
24 of LIASA, Minasligas and CCM, the three producers in
25 Brazil still subject to the order.

1 We support decumulating the imports from
2 Brazil with the imports from China, and we support
3 revocation of this antidumping duty order as to
4 Brazil.

5 Our story and testimony in this
6 investigation is very simple. We will highlight the
7 significant changes in conditions of competition that
8 have occurred in this market since the original
9 investigation and the last sunset review and show that
10 there is no likelihood that injury is likely to
11 continue or recur.

12 Much has happened in the market and in this
13 industry and in the foreign industry since the
14 Commission last reviewed this antidumping duty order.
15 Even more has changed since 1991. At the time the
16 order was issued, seven Brazilian producers existed,
17 or at least in the last sunset review there were seven
18 producers in Brazil. Now there are only four
19 remaining who are subject to the order.

20 The antidumping duty order against Brazil
21 has already been revoked by the DOC as to three
22 producers -- CBCC, which is owned by Dow, and RIMA and
23 RIMA's related company, Electrosilex, who has a
24 10-year lease agreement with Electrosilex to use all
25 of Electrosilex's capacity under this 10-year agreement

1 -- so CBCC, RIMA and Electrosilex are no longer under
2 the order.

3 Combined, these nonsubject producers in
4 Brazil represent a significant portion of overall
5 production capacity that is no longer subject to the
6 antidumping duty order.

7 Currently the remaining subject producers
8 have insufficient capacity with which to shift to the
9 United States, and their capacity utilization rates
10 are very high. They also have very low inventory
11 levels.

12 There are no plans to increase capacity in
13 the future, and there also are no trade relief
14 measures in place against the foreign producers in any
15 country other than the United States so there are no
16 barriers to entry in other countries that would
17 provide some impetus for a diversion of shipments from
18 another country to the United States.

19 During the original investigation in the
20 first sunset review, it was primarily producers no
21 longer in existence or producers against whom the
22 order has already been terminated who were mainly
23 responsible for the capacity, production and exports
24 to the U.S. that were the factual basis for the
25 Commission's affirmative determinations in those

1 investigations, particularly the determination in the
2 first sunset review.

3 Therefore, the original determination and
4 the first sunset review do not provide a basis to
5 infer that revocation of the antidumping duty order is
6 likely to lead to a recurrence of material injury to
7 the domestic industry.

8 We also addressed the Petitioner's
9 statements that the prices of the Brazilian subject
10 imports will be sold at unfair prices and will result
11 in adverse price effects for the domestic producers.

12 Like so many other foreign producers, the
13 Brazilian producers did not participate in the DOC
14 sunset review investigation. However, we believe that
15 these producers' history before the DOC in annual
16 administrative reviews is telling.

17 LIASA, one of the remaining subject
18 producers, has been issued a zero dumping duty margin
19 by the Department of Commerce in four consecutive
20 administrative reviews. Its current antidumping duty
21 rate is zero. CCM also has a current antidumping duty
22 rate of zero. It was issued to it in its most recent
23 administrative review at the Department of Commerce.

24 Minasligas has received a dumping margin of
25 0.74 percent, and that is its current rate. However,

1 it too has received zero dumping duty margins in
2 administrative reviews at the Commerce Department
3 three times.

4 Therefore, the remaining subject producers
5 have demonstrated the likelihood that their future
6 shipments will be at fair prices and not likely to
7 lead to significant price depression or price
8 suppression.

9 The pricing data and unit value data
10 gathered by the Commission in this investigation
11 demonstrate current high prices, and they offer no
12 evidence that there will be any underselling by the
13 subject producers or that there will be significant
14 price depression or price suppression.

15 Additionally, the data show that the U.S.
16 demand for silicon metal has grown since 2000 and will
17 continue to grow and that the U.S. silicon metal
18 industry is healthy, robust and not vulnerable to
19 import competition. These changes have created a
20 vastly different landscape from the previous sunset
21 review and original investigation.

22 Thank you.

23 MR. BISHOP: Would the first panel, those in
24 support of continuation of the antidumping duty
25 orders, please come forward and be seated?

1 Mr. Chairman, all witnesses have been sworn.

2 (Witnesses sworn.)

3 CHAIRMAN PEARSON: Welcome back, Mr. Kramer.

4 Please proceed when you're ready.

5 MR. KRAMER: Thank you. I'm going to
6 reserve virtually everything I have to say in rebuttal
7 for the closing statement, but there were several
8 statements made in the opening on behalf of the
9 Brazilian producers that are factually inaccurate that
10 I think it's important to respond to.

11 The statement was made first that there were
12 three producers that remain subject to the order and
13 then the statement that there were four remaining
14 subject to the order. The statement was then made
15 that the order has been revoked with respect to
16 Electrosilex.

17 The order remains in place with respect to
18 Electrosilex, and there's a very substantial deposit
19 rate in place. The facts are that Electrosilex for a
20 10-year period has leased its production facilities to
21 RIMA, but as a producer it remains subject to the
22 order, and no revocation has occurred.

23 Of course, the order remains in place as to
24 any company from Brazil that produces silicon metal.
25 There are four such companies producing now. A fifth

1 company, SIBRA, produced for a period of time and then
2 converted to another product.

3 The other point I want to address is the
4 statement that the producers that are no longer
5 subject to the order accounted for the flow of product
6 into the United States that inflicted injury preorder.
7 I don't know if I stated that precisely correctly, but
8 that was the substance of the statement.

9 I'd like to refer the Commission to page 17
10 of our brief, which lays out the facts with respect to
11 whether the company is still subject to the orders, to
12 what role they played in the surge of imports that
13 injured the domestic industry.

14 Our first witness is Arden Sims.

15 MR. SIMS: Good morning. Mr. Chairman and
16 Commissioners, my name is Arden Sims. I am president
17 and CEO of Globe Metallurgical and have held that
18 position for more than 22 years. I have a Bachelor of
19 Science degree in Electrical Engineering. I've worked
20 in the silicon metal industry since 1970.

21 Prior to joining Globe I worked for 11 years
22 in management positions at Union Carbide Corporation.
23 I spent most of my time at the Alloy, West Virginia,
24 silicon metal plant, which was then owned by Union
25 Carbide. In addition, for three years I was president

1 of operations for another ferroalloy producer, and I
2 have extensive knowledge of all aspects of the silicon
3 metal industry.

4 I would like to tell you about our company.
5 Globe is now the largest silicon metal producer in the
6 United States. I am proud of the fact that Globe is
7 an efficient producer of silicon metal that is fully
8 capable of competing with other suppliers in a fair
9 trade environment.

10 We have worked to reduce our production
11 cost. For example, we have been able to reduce our
12 usage of electrodes per unit of output by half. While
13 we have succeeded in becoming an efficient silicon
14 metal producer, we are currently confronting
15 significant energy and other cost increases. For
16 example, just at the beginning of this year Alabama
17 Power Company raised the energy cost at our Selma
18 plant by about 30 percent.

19 When I started with Globe, the company began
20 committing significant additional resources to total
21 quality management which focused on further improving
22 the quality, efficiency and cost of Globe's
23 operations.

24 As the result of dedicated efforts by
25 management and workers, our company was recognized for

1 its achievements. Globe won the Malcolm Baldrige
2 National Quality Award in 1988 as the first small
3 company to win that award. Later we also received the
4 1995 Supplier of the Year Award from Dow Corning
5 Corporation.

6 We have maintained our emphasis on quality.
7 This continues today, as illustrated by the ISO
8 certificates of registration that are currently in
9 effect at our Alloy and Beverly plants.

10 Globe's roots go back to 1871 when it was
11 founded as the Globe Iron Company in Jackson, Ohio.
12 Globe built the Beverly plant in 1955 and started
13 silicon metal production there in the mid-1960s. In
14 the early 1970s, the company expanded with the
15 acquisition of the Selma, Alabama plant.

16 Since I became president and CEO of Globe in
17 1984, the company's silicon metal operations have
18 undergone significant expansion. However, this
19 expansion has not been a steady, lineal progression,
20 but rather been a rough ride with serious setbacks.

21 From 1988 through 1990, Globe's silicon
22 metal production capacity declined by 27 percent, and
23 our production declined by more than 29 percent. Over
24 the same period, our financial performance greatly
25 deteriorated. Afterwards, U.S. silicon metal prices

1 significantly improved, and so did Globe's financial
2 condition.

3 As a result, in 1993 we acquired a one
4 furnace silicon metal plant in Springfield, Oregon,
5 from Dow Corning which had decided to stop producing
6 silicon metal. The Springfield facility enabled us to
7 better serve our customers in the western United
8 States. After that acquisition we increased
9 production at the Springfield plant by about one-third
10 solely through efficiency improvements.

11 The following year, in December 1994, we
12 purchased the Niagara Falls, New York, plant. We
13 completely refurbished the existing silicon metal
14 furnace and then converted a ferrosilicon furnace to
15 silicon metal production in 1997. As a result,
16 production effectively doubled at that site.

17 The period of expansion was followed by
18 severe setbacks for Globe's silicon metal business.
19 In the year 2000, December of 2000, we were forced to
20 idle our Springfield plant.

21 Difficult market conditions and high power
22 costs led to an arrangement under which the electric
23 utility agreed to purchase back the power not used by
24 the idle plant. In other words, market conditions
25 made it more economical for Globe to idle the plant in

1 order to sell electricity back to the power company
2 than to produce silicon metal.

3 The same adverse market conditions caused us
4 in 2000 to convert both silicon metal furnaces at our
5 Beverly, Ohio, plant to the production of ferrosilicon
6 for use as a foundry alloy feedstock. This major
7 restructuring also forced Globe to eliminate about 90
8 jobs permanently and lay off 67 other people at least
9 temporarily.

10 Around the same time, adverse market
11 conditions and high power costs also affected our
12 Selma, Alabama, plant. In order to obtain a more
13 competitive power rate for the Selma plant, Globe
14 agreed to a new contract with Alabama Power that
15 mandated a shutdown of the Selma plant in July and
16 August of 2001 and 2002. On each occasion following
17 these shutdowns, depressed market conditions forced
18 Globe to delay the restart of one of the two idle
19 furnaces.

20 Furthermore, falling sales and very low
21 silicon metal prices led to the decision to convert
22 one of the two silicon metal furnaces at the Niagara
23 Falls plant to ferrosilicon production in August 2001.
24 When market conditions did not improve by year end,
25 both the ferrosilicon furnace and the remaining

1 silicon metal furnace at Niagara Falls had to be
2 idled.

3 The silicon metal furnace at Niagara Falls
4 was restarted in July 2002 when the Selma plant was
5 idled under the agreement with Alabama Power Company.
6 As a result, for July and August 2002 Globe's silicon
7 metal operations were reduced to production in a
8 single furnace.

9 By late October 2002, the two silicon metal
10 furnaces at Selma were back in operation. However, at
11 that time our total silicon metal workforce had been
12 reduced to less than half of its level in 2000.

13 The financial strains Globe has encountered,
14 including the difficult pricing and economic
15 environment, forced Globe to file for Chapter 11
16 bankruptcy protection in April 2003 and to restructure
17 its operations.

18 We restarted one of the two idle furnaces at
19 Beverly in September 2003. At the same time, the
20 remaining silicon metal furnace at Niagara Falls was
21 shut down, with the result is that silicon metal
22 production ceased at the plant, which still remains
23 closed today.

24 As part of Globe's reorganization under
25 Chapter 11 of the Bankruptcy Code, the Springfield

1 plant was sold for the real estate value of its site.
2 In May of 2004, Globe emerged from bankruptcy, but
3 not before our workforce had been reduced by a quarter
4 from its 2003 level and the value of the company's
5 assets had been significantly written down.

6 The recovery of silicon metal prices allowed
7 Globe to restart the second furnace at Beverly in
8 2004. Only then did Globe return to its normal
9 configuration of producing silicon metal in four
10 furnaces, two in Beverly and two in Selma.

11 In December of 2005 we acquired from Elkem
12 the Alloy, West Virginia, production facility, which
13 we continued to operate as a silicon metal plant. As
14 a result of this acquisition, Globe is now the largest
15 silicon metal producer and one of only two remaining
16 U.S. producers.

17 Why did Globe suffer the setbacks that I
18 have described? These serious setbacks occurred
19 because of the injury Globe experienced due to large
20 and rapidly increasing volumes of low-priced dumped
21 imports.

22 As our Vice President of Sales, Marlin
23 Perkins, will explain more fully, silicon metal is a
24 commodity product sold primarily on the basis of
25 price. Because of the nature of the product and the

1 U.S. silicon metal market, the domestic silicon metal
2 industry is very vulnerable to injury by unfair traded
3 imports.

4 Beginning in 1988, a large influx of dumped
5 silicon metal imports from Brazil and China flooded
6 the U.S. market. In each of the three years between
7 1988 and 1990, Brazil was by far the largest source of
8 these imports. The dumped imports were sold at low
9 and declining prices that undercut domestic producers'
10 prices and caused U.S. market prices to collapse.

11 Between the third quarter of 1988 and
12 December of 1989, the *Metals Week* price for silicon
13 metal dropped more than 70 cents per pound of
14 contained silicon to 52 cents per pound, a decline of
15 more than 25 percent. This enormous price decline
16 forced Globe and other silicon metal producers to
17 lower their prices to compete with the prices of the
18 unfairly traded imports or lose sales.

19 As a result, U.S. silicon metal producers
20 suffered declining sales, revenues, lost sales and
21 significant operating losses. At the time we at Globe
22 were very concerned about the survival of the company.

23 The silicon metal antidumping orders forced
24 the Brazilian and Chinese suppliers to sell at fair
25 value or to withdraw from the market. With the orders

1 in place, the volume of imports from the two countries
2 declined dramatically. By the end of 1993, the annual
3 volumes of imports from Brazil and China had fallen by
4 more than 94 percent from the 1990 level.

5 The orders also allowed U.S. silicon metal
6 prices to improve. These improvements as a result of
7 the orders enabled Globe to increase its silicon metal
8 production capacity, production, shipments and
9 employment. From the depressed 1990 levels, Globe was
10 able to increase its U.S. silicon metal annual
11 production volume by more than 150 percent and its
12 U.S. shipments volume by more than 160 percent by
13 1999.

14 After the orders were issued, the
15 profitability of our silicon metal operations
16 recovered and improve4d to the level that enabled
17 Globe to invest in improved productivity, increased
18 production capacity, maintenance of existing
19 equipment, improved plant infrastructure and
20 protection of the environment.

21 We were able to acquire the Springfield and
22 Niagara Falls plants and more than double our silicon
23 metal workforce between 1990 and 1999. The recovery
24 of our operations and the U.S. industry as a whole
25 could not have occurred without the relief the orders

1 provided from the aggressive unfair pricing of the
2 Brazilian and Chinese imports.

3 This recovery, however, was undermined by a
4 new flow of unfairly traded imported silicon metal.
5 Between 1999 and 2001, Russian imports surged into the
6 U.S. market at very low and declining prices. These
7 imports cause an enormous price decline. As was the
8 case with the dumped Brazilian and Chinese imports.

9 Globe and the other U.S. producers were
10 forced to reduce their prices to compete with the
11 prices of the dumped Russian silicon metal imports or
12 to lose sales. As a result, the U.S. producers again
13 suffered greatly declining sales revenues, lost sales
14 and net and operating losses.

15 Between 1999 and 2001, Globe's sales revenue
16 plummeted by more than 46 percent, and its U.S.
17 shipments declined by more than 53 percent. After
18 preliminary relief was granted, the Russian imports
19 disappeared from the U.S. market and have not
20 returned. As a result, U.S. silicon metal prices
21 increased, allowing Globe's financial condition to
22 improve and the company to emerge from bankruptcy.

23 The experience with the Russian imports
24 demonstrates what would happen if the Brazilian order
25 were revoked and subject Brazilian imports were

1 allowed to reenter the market without the discipline
2 of the order. Devastating injury was inflicted by the
3 Russian imports, even though the capacity of the
4 Russian silicon metal industry is much smaller than
5 that of the Brazilian producers that remain subject to
6 the order.

7 Not only do the Brazilian producers have
8 substantial existing production capacity. They also
9 could bring more capacity on line by converting
10 ferrosilicon furnaces to silicon metal production.

11 Globe is currently still recovering from the
12 extensive injury the company suffered from dumped
13 Russian imports. It has just been a little over two
14 years since Globe emerged from bankruptcy after a
15 costly and painful restructuring process. The Brazil
16 and China orders, in combination with the Russian
17 orders, have made that emergence possible.

18 I understand that the Brazilian producers
19 are portraying the U.S. industry as healthy, robust
20 and sheltered from import competition. It is true
21 that Globe's financial condition has improved
22 significantly in the past two years. However, that
23 improvement reflects and is dependent upon the relief
24 from unfair import competition that is now in place.
25 Moreover, the recent improvement has by no means been

1 sufficient to erase the devastation our company has
2 experienced due to imported products.

3 Globe's recovery would not have been
4 possible without the orders covering imports from
5 Brazil and China, and we greatly appreciate the fact
6 that import relief was provided and has been
7 maintained.

8 In closing, I want to reemphasize how
9 critically important the continuation of the
10 antidumping orders on silicon metal from Brazil and
11 China is to Globe. We would not have been able to
12 emerge from bankruptcy, to acquire the former Elkem
13 plant or indeed to survive as a domestic supplier of
14 silicon metal in the absence of the orders. All of
15 the work that Globe has done to improve its operations
16 and to become the company it is today would be
17 severely at risk if the orders were revoked.

18 We welcome fairly traded import competition.
19 However, the experience with the dumped Brazilian and
20 Chinese imports, as well as the injury inflicted by
21 the dumped Russian imports, have demonstrated the
22 devastating effects that revocation of the orders
23 covering imports from Brazil and China would have on
24 the U.S. industry.

25 Thank you.

Heritage Reporting Corporation
(202) 628-4888

1 MR. KRAMER: Our next witness is Marlin
2 Perkins.

3 MR. PERKINS: Good morning, Mr. Chairman and
4 Commissioners. My name is Marlin Perkins. I am Vice
5 President of Sales for Globe Metallurgical.

6 For over 17 years I have supervised the
7 selling and marketing of Globe's entire product line,
8 including silicon metal. Thus, I am very familiar
9 with the U.S. silicon metal market and the impact of
10 unfairly traded imports on the domestic industry.

11 Today I am here to testify about the product
12 silicon metal and the U.S. silicon metal market and
13 why the antidumping duty orders covering imports from
14 Brazil and China are so important to Globe.

15 First I would like to address the nature of
16 the product. Silicon metal is a commodity product.
17 There is no meaningful difference between domestic and
18 imported silicon metal.

19 The Brazilian and Chinese producers and the
20 other import competitors in the U.S. market make the
21 same product as the U.S. industry using the same raw
22 materials and the same production process, and sell it
23 on the same basis and to the same types of customers.
24 A ton of silicon metal is a ton of silicon metal
25 regardless of source.

1 The U.S. market is a highly competitive
2 market with two domestic producers and many import
3 suppliers. The silicon metal sold by the Brazilian
4 and Chinese producers, as well as other domestic and
5 import suppliers, meets customer specifications in all
6 segments of the market and is sold to customers in all
7 of these market segments.

8 The bottom line for customers is that price
9 is by far the most important consideration in
10 purchasing decisions. Of course, a supplier must meet
11 the customer's specifications for silicon metal with
12 respect to maximum levels of impurities and sizing.
13 Customers also ask about sales and technical service,
14 but when it comes down to who wins the business it
15 always comes back to price -- how much per pound.

16 Current market price information is readily
17 available in industry publications like *Ryan's Notes*
18 and *Metals Week*. Through these weekly publications
19 and because customers tell suppliers about competing
20 bids, price changes are rapidly disseminated
21 throughout the market.

22 A large portion of total U.S. silicon metal
23 consumption is concentrated in the hands of a few
24 large chemical and aluminum industry purchasers.
25 Because of their large size and small number, these

1 major purchasers have a great deal of leverage in
2 price negotiations. They are in a position to and do
3 use competing domestic and import price offers to
4 force our prices to the lowest level possible.

5 I understand the Brazilian producers are
6 telling the Commissioners that since the first sunset
7 reviews silicon metal has changed from being a
8 commodity product to one sold on a tailor-made basis.
9 It just isn't true that silicon metal is no longer a
10 commodity product.

11 In fact, if there has been a change it's
12 been in the direction of a convergence to producing
13 what is fundamentally a single high-quality product.
14 Globe and most producers globally aim to produce
15 silicon metal that can be sold to customers in all
16 market segments.

17 As the Commission knows, there are three
18 principal market segments for silicon metal --
19 chemical, primary aluminum and secondary aluminum. In
20 most respects chemical industry customers have the
21 most rigorous specifications in terms of the maximum
22 levels of impurities. However, when you produce a
23 product that meets the specification of chemical
24 industry customers you can sell this same product down
25 to customers in the primary and secondary aluminum

1 market segments.

2 Silicon metal is produced in the continuous
3 furnace process that includes postfurnace refining.
4 The silicon metal produced through that process can be
5 and is sold to all types of customers. Sometime, we
6 do a little more post furnace refining, or in one
7 case, a postfurnace ladle addition, to meet the needs
8 of a particular customer.

9 In addition, we cannot completely control
10 the chemical composition of the material that comes
11 out of our furnaces. If it happens, for example, that
12 certain material has a higher than anticipated iron
13 content we will sell this material to customers that
14 have a less stringent iron specification.

15 Thus, to a certain extent we match our
16 output to customers' needs whether they relate to the
17 chemistry or the sizing of the product. However,
18 these are minor differences in composition. We do not
19 produce silicon metal that can only be sold to a
20 particular customer. Nor do we produce material that
21 is not interchangeable with competing material sold by
22 other suppliers.

23 The Brazilian producers can and do sell to
24 all market segments, and all U.S. and Brazilian
25 suppliers are capable of meeting the requirements of

1 all types of customers.

2 I also understand that the Brazilian
3 producers claim that certification and
4 prequalification requirements would present a barrier
5 to entry for Brazilian and Chinese imports, if the
6 orders were revoked.

7 In fact, this is an area where the market
8 has changed in recent years. While in the past
9 customers required suppliers to undergo a more
10 rigorous prequalification process, now that process
11 can be accomplished in a matter of days or weeks in
12 most cases. In some circumstances such as chemical
13 segment sales for electronic applications, it can take
14 up to a few months, but these cases are the exception
15 today.

16 The extent to which certification and
17 prequalification have become less of an issue was
18 demonstrated when GE Silicones held its internet
19 auction in 2001 where suppliers were qualified in a
20 matter of days and GE bought material from whoever
21 offered the lowest price.

22 For most primary and secondary aluminum
23 producers, qualification has been reduced to a
24 truckload trial. The customers buy a truckload of
25 material from a would-be supplier, and if the product

1 is satisfactory they will take additional volumes from
2 that supplier. If the product is not satisfactory,
3 there may be some follow-up questions for the
4 supplier.

5 In short, certification and prequalification
6 requirements are not a barrier to imports from Brazil
7 and China. They would offer us zero protection from a
8 renewed flow of low-priced Brazilian and Chinese
9 imports.

10 While a significant portion of silicon metal
11 sales are made under long-term contracts covering a
12 period of at least one year, such contracts do not
13 protect us from market price declines. The price in
14 long-term contracts is a negotiated term that reflects
15 competition at the time the contract is written.

16 When market prices fall and the lower prices
17 are published, the large silicon metal customers
18 simply pressure us to reduce our contract prices. If
19 we don't meet their demands, they will either reduce
20 the volumes covered by the contract or not buy from us
21 in the future.

22 This just happened to us at the end of last
23 year with a major chemical industry customer that we
24 sell to under an annual agreement. Market prices fell
25 below the agreed upon contract price. They told us

1 that business was slow and that they didn't need the
2 volumes that they had committed to purchase. We were
3 forced to cut our price. After we did the customer
4 took the full volume specified in the contract.

5 For primary and secondary aluminum
6 producers, contracts are normally based on anticipated
7 volume requirements for a defined period of time,
8 whether for a quarter, six months or a year. However,
9 the amount actually purchased during the contract
10 period frequently ends up different than the original
11 contract volume.

12 We have very little power to compel the
13 customer to take any minimum volume, and as a result
14 when market prices fall customers can simply reduce
15 the quantities they buy from us under the contract and
16 buy lower priced material to replace the higher priced
17 volume originally agreed upon.

18 I would now like to explain why I think that
19 revoking the orders would be a catastrophe. I was
20 there in 1989 and 1990 when the imports from Brazil
21 and China came flooding into the U.S. market. They
22 took market share by offering very low prices,
23 undercutting those of Globe and other U.S. producers.
24 The result was that U.S. market prices fell to very
25 low levels, and the domestic industry was severely

1 injured.

2 The Brazilian imports were the largest in
3 volume during that period and increased dramatically.
4 They were very aggressive with respect to pricing. I
5 remember visiting customers during this period. When
6 we would meet the Brazilian's price they would simply
7 cut it again. Chinese imports increased rapidly and
8 were very low-priced as well. Without the antidumping
9 relief, Globe would not have survived.

10 Unfortunately, the same pattern repeated
11 itself with low-priced imports from Russia beginning
12 in 1999. In that year and in 2000, significant
13 quantities of Russian imports were sold at low prices,
14 undercutting the prices of domestic producers and
15 other import suppliers. Globe and other suppliers had
16 to lower their prices.

17 Then, beginning in 2001, the trade press
18 started reporting an increase in Russian imports at
19 even more aggressive prices. Every time Russian
20 silicon metal won a sale by cutting a price, prices
21 throughout the market were affected. Prices declined
22 almost 30 percent, reaching 47 cents a pound in May
23 2001.

24 If the orders covering imports from Brazil
25 and China were revoked, the same thing would happen

1 again. The Chinese producers and Brazilian producers
2 under order would resume shipping large volumes of
3 imports to the United States, and they would do so at
4 prices undercutting Globe and other suppliers. Market
5 prices would fall, and Globe's continued viability
6 would be very much in doubt.

7 The Brazilian and Chinese imports are among
8 the lowest priced and most aggressive in the world.
9 They fight for market share wherever they appear,
10 using low price as leverage. I witnessed this
11 firsthand during the period leading up to the filing
12 of the petition.

13 Then, after the Chinese and Brazilian
14 imports in the U.S. were constrained by the
15 antidumping orders, we continue to see the same
16 aggressive pricing from these imports in Canada.
17 Globe used to make significant sales of silicon metal
18 in Canada.

19 A primary aluminum producer that previously
20 had purchased silicon metal from U.S. suppliers moved
21 part of its high silicon aluminum alloy production to
22 Canada. When this company came out seeking bids for
23 silicon supply, we offered them silicon metal at an
24 attractive price.

25 We were told, however, that the company had

1 decided to purchase from Brazil and Chinese suppliers
2 whose prices had undercut our bids. Today Globe is no
3 longer making significant sales into Canada. We were
4 displaced by the Chinese and Brazilian silicon metal.

5 As I've explained, silicon metal is a
6 commodity product. Sellers can only expand their
7 share by undercutting their suppliers, which forces
8 prices down across the market. A relatively small
9 volume can have a big effect on the market price.

10 It can take as little as one or two low-
11 priced sales to be reported in *Ryan's Notes*, and then
12 the prices of those sales become the new price that
13 customers expect to be quoted until the next lower
14 priced sale is reported to *Ryan's Notes* or *Metals Week*
15 and the published market price declines once again.

16 I understand that the Brazilian producers
17 are arguing that they are somehow very different than
18 the Chinese producers. It is true that the Chinese
19 have enormous capacity, is very export oriented and is
20 very aggressive in undercutting competing suppliers'
21 prices. If the Chinese order were revoked that would
22 have a devastating impact on the U.S. market and on
23 Globe.

24 To say this does not mean that revoking the
25 Brazilian order would not also have a very negative

1 impact, but by the same means. The Brazilian
2 producers are aggressive competitors with substantial
3 capacity selling a commodity product at prices that
4 must undercut their suppliers' prices to win sales.

5 Tons are tons, when offered at low prices
6 undercutting the domestic industry and other
7 suppliers. It does not matter whether the cheaper
8 material comes from China or Brazil. The impact is
9 the same. Sales are lost, and market prices go down.

10 And when significant volumes of low-priced
11 material enter into the U.S. market as would happen in
12 this case, prices spiral downward to a level that is
13 not sustainable for the domestic industry. It's
14 happened twice before and will happen again if the
15 orders on Brazil and China are revoked.

16 Without question, the antidumping orders
17 have been critical to the continued viability of the
18 domestic industry. The imposition of the orders on
19 Brazil and China in 1991 allowed prices to increase
20 and conditions in the U.S. market to improve
21 significantly.

22 After reaching a low of 52 cents per pound
23 in December of 1989, the U.S. market prices increased
24 to more than 86 cents a pound in 1997. As I
25 mentioned, prices fell to a low of 47 cents by May of

1 2001 due to the Russian imports. Our sales prices and
2 volumes improved dramatically after preliminary relief
3 was issued in that case in September 2002 and after
4 final relief was granted.

5 The improvement due to the Russian order
6 would never have been possible if the orders on Brazil
7 and China had not been maintained in the first sunset
8 reviews completed in 2000. The orders covering Brazil
9 and China are essential to the continued viability of
10 the domestic industry.

11 Despite the improved market conditions made
12 possible by the orders, Globe is still very
13 vulnerable. We have gone through difficult years
14 where plants were shuttered and furnaces idled. In
15 the end, Globe was forced to seek protection from
16 creditors under the bankruptcy laws.

17 Prices have risen, but our electricity and
18 other input costs have risen also. Globe needs a
19 healthy market to keep its recovery on track.

20 For the reasons I've explained, revoking the
21 orders would have a devastating effect on the U.S.
22 market and Globe. After what we have been through,
23 that could literally put us out of business.

24 That concludes my remarks. Thank you.

25 MR. KRAMER: Kenneth Button is our next

1 witness.

2 MR. BUTTON: Good morning. I'm Kenneth
3 Button, Senior Vice President of Economic Consulting
4 Services, LLC, and I'm accompanied by Jennifer Lutz,
5 Senior Economist at ECS.

6 We are appearing on behalf of Globe
7 Metallurgical in these sunset reviews. I will address
8 conditions of competition, the effectiveness of the
9 order and vulnerability. Ms. Lutz will address the
10 likely effects of revocation.

11 I will begin by noting the conditions of
12 competition that are distinctive to the silicon metal
13 industry. These conditions are consistent with the
14 Commission's findings in the original investigations,
15 as well as its more recent findings in the first
16 sunset review and the 2003 investigation of imports of
17 silicon metal from Russia.

18 Contrary to the Respondents' claim, these
19 conditions have not substantially changed. First,
20 demand for silicon metal is a derived demand arising
21 from downstream production of aluminum and chemical
22 industries. Historically the demand for silicon metal
23 has not been affected by rises and falls in silicon
24 metal prices largely because there are no substitutes
25 for silicon metal.

1 Second, silicon metal is a commodity
2 product. While the product purchased by a customer
3 may need to conform to the customer's particular
4 specifications, the differences in specifications
5 among buyers in the consuming chemical and
6 metallurgical industries tend to be relatively minor
7 and can be met by virtually all domestic and import
8 suppliers.

9 Third, silicon metal of a so-called higher
10 grade may be and often is used for sale to customers
11 using the so-called lower grades of material.
12 Producers make the highest purity material that they
13 can. No producer intentionally makes a product that
14 will only meet, for example, secondary aluminum
15 customer specifications.

16 Fourth, the U.S. silicon metal market is a
17 single market in which subject imports compete in all
18 segments. The subject imports have improved their
19 quality since the original investigation and are able
20 to compete in all segments of the silicon metal
21 market.

22 As a result, the degree of competition
23 between the domestic producers and subject imports is
24 more direct than ever. Prices in different segments
25 of the U.S. silicon metal market continue to be

1 interrelated today just as they were during the
2 original investigation period.

3 Fifth, this competition in the market is
4 based principally on price, and relatively small
5 differences in price can lead consumers to switch
6 suppliers. Information about prevailing prices is
7 publicly available through industry publications such
8 as *Metals Week* and *Ryan's Notes*.

9 Some contracts establish transaction prices
10 based on formulas tied to such reference prices.
11 Pricing changes are quickly communicated through the
12 market, and contracts with such pricing formulas make
13 the supplier immediately vulnerable to the effects of
14 an overall declining market price level.

15 Finally, price adjustments are common in
16 long-term contracts. By one means or another, long-
17 term customers get lower prices in periods of
18 declining prices even when the contracts do not
19 contain formal price adjustment mechanisms.

20 As a result, long-term contracts provide
21 little shelter from import competition. Of course, in
22 periods of rising prices customers are not as eager
23 for their contract to reflect prevailing higher market
24 prices.

25 The antidumping orders were originally put

1 in place in mid 1991 and were very effective in
2 permitting improvement in the condition of the
3 domestic industry. The antidumping orders had an
4 immediate volume effect, causing the volume of imports
5 from Brazil and China to fall by 77 percent from their
6 preorder peak of 56,000 tons in 1990 to only 12,000
7 tons in 1991, the year in which the order was imposed.

8 The subject import volume dropped even
9 further during 1992, the first full year of relief, to
10 only 4,500 tons, a fall of 92 percent from 1990.
11 Subject imports remained well below the levels
12 experienced during the original period of
13 investigation through 2002 when two Brazilian
14 producers, RIMA and CBCC, were able to obtain
15 revocation of the order by achieving zero or de
16 minimis margins in three consecutive administrative
17 reviews.

18 Your orders also caused the prices of the
19 subject imports to rise substantially. While the
20 preorder 1990 average unit value of subject imports
21 had fallen to only 47 cents per pound, it rose to an
22 average of 55 cents in 1992, the first full year of
23 relief.

24 The discipline of the orders has kept the
25 unit value of the subject imports well above the

1 dumped POI levels, with the exception of those imports
2 from China which enter under the Customs provisions
3 for temporary importation under bond, TIB.

4 The price benefit from the orders is further
5 reflected in the rebound in the *Metals Week* spot
6 price. From the September 1990 POI low of 52 cents,
7 the *Metals Week* spot price recovered to 66 cents in
8 the month of August 1991 after the imposition of the
9 orders and the substantial exit of the subject imports
10 from the U.S. market.

11 Following the first sunset reviews of these
12 orders, the *Metals Week* price dropped sharply again,
13 this time in response to dumped imports from Russia.
14 After the Commission's affirmative determination in
15 the Russian investigation, *Metals Week* prices
16 recovered again.

17 In the first sunset reviews of these orders
18 the domestic industry noted that the original orders
19 on Brazil and China brought declining subject import
20 volume and increasing subject import unit values,
21 which allowed for a considerable improvement in the
22 condition of the domestic industry.

23 Although the domestic industry experienced
24 material injury because of dumped imports from Russia
25 in the first half of the period of review of the

1 current sunset reviews, the affirmative determination
2 in the Russian investigation has allowed the domestic
3 industry's condition to improve again.

4 The industry, however, remains vulnerable to
5 injury from dumped imports from Brazil and China. A
6 prehearing staff report shows the clear improvements
7 in operating performance reported by the domestic
8 industry in the first sunset reviews.

9 From the original POI to the POR of the
10 first sunset reviews the domestic industry recorded
11 improvements in production, production capacity, U.S.
12 shipments, quantity and average unit values,
13 employment, hours worked and productivity. These
14 improvements are directly attributable to the decline
15 in subject import volumes and the increase in subject
16 import average unit values caused by these orders.

17 While much of the data covering the current
18 period of review is confidential, the public report
19 issued in the Commission's investigation on imports
20 from Russia shows declines in all of these industry
21 condition indicators from 1999 through the January to
22 September 2002 period. The Commission findings in the
23 investigation of imports from Russia are directly
24 relevant to the current reviews as we will discuss in
25 more detail shortly.

1 Following the original Chinese and Brazilian
2 orders, the expanded sales volume in conjunction with
3 improved pricing let the industry's financial
4 performance improve materially. In 1990, the last
5 full year of the original POI, the domestic industry
6 was operating at a significant loss. By the close of
7 1992, the first full year of relief, the domestic
8 industry as a whole had returned to profitability.

9 While the profitability data from the first
10 sunset review POR are confidential, the data from the
11 2002 Russian investigation shows that the industry was
12 profitable in 1999, but quickly sank into losses in
13 the part year 2002 period. In recent years, the
14 industry has again returned to profitability.

15 While the domestic industry did enjoy
16 considerable improvement as a result of the orders, it
17 remains vulnerable today. The Commission's
18 investigation of dumped imports from Russia provides
19 valuable information for the Commission in making its
20 determination in this second sunset review proceeding.

21 The Russian investigation made clear that
22 dumped imports caused injury to the domestic industry.
23 In a commodity product like this, a new supply source
24 can only gain market share by underselling the
25 existing suppliers and thus driving down price.

1 In the Russian investigation, imports from
2 Russia entered the U.S. market at low prices, quickly
3 expanding market share from eight percent in 1999 to
4 12 percent in 2001 to 16 percent in January to
5 September 2002, doing so by underselling U.S.
6 producers and nonsubject imports, driving down market
7 prices. These dumped imports caused deterioration in
8 virtually all performance and profitability indicia.

9 With respect to the import sources of
10 concern today in today's proceeding, please note that
11 China is the world's largest producer of silicon metal
12 with a capacity that has increased sharply since the
13 original investigation and since the first sunset
14 review period of review and has reached an estimated
15 capacity level of nearly one million tons per year.

16 Brazil is the world's second largest
17 producer of silicon metal with capacity reported by
18 CRU to be over 250,000 tons per year. Even excluding
19 RIMA and excluding CBCC, the remaining producers'
20 aggregate capacity is equivalent to being the world's
21 fourth largest supplier of silicon metal.

22 The large size of the industries in both
23 subject countries is particularly of concern in light
24 of the severe injury caused by imports from Russia,
25 which had significantly lower capacity. The Chinese

1 and Brazilian industries are both heavily export
2 oriented.

3 After the imposition of the order on imports
4 from Russia in March 2003, the *Metals Week* price data
5 showed clear improvement. Prices reached a peak in
6 2004 and have moderated somewhat from this peak in
7 2005 and 2006.

8 This improvement in prices, however, does
9 not insulate the domestic industry from injury caused
10 by the dumped imports. Rather, these price
11 improvements were possible only because of the
12 restoration of fair trade in the U.S. market after the
13 removal of dumped imports from Russia.

14 Furthermore, the industry is currently
15 struggling to cope with rising costs for such key
16 inputs as energy.

17 Ms. Lutz will now address the likely effects
18 of revocation.

19 MS. LUTZ: Good morning. I am Jennifer
20 Lutz, Senior Economist at ECS.

21 In the context described by Dr. Button,
22 revocation of the orders is likely to have serious
23 damaging effects on the domestic industry in the
24 foreseeable future. The evidence shows that the
25 volume of subject imports is likely to be highly

1 significant in the absence of the orders.

2 The ability of the Brazilian and Chinese
3 industries to increase exports to the United States
4 very rapidly was aptly demonstrated during the
5 original investigations when imports from Brazil
6 increased from 13,000 short tons in 1988 to 32,000
7 short tons in 1990, and imports from China rose from
8 10,000 short tons to 26,000 short tons. Their
9 combined market share more than doubled from 11 to 27
10 percent.

11 The subject countries are clearly capable of
12 achieving such an expansion once again. Indeed, China
13 is the world's largest producer and exporter of
14 silicon metal. China's unused capacity is so large
15 that it could fill more than half of U.S. consumption.
16 This capacity would clearly be directed to the U.S.
17 market.

18 Brazil is the world's second largest
19 producer of silicon metal after China, and the
20 companies that remain subject to the order have
21 capacity equivalent to the world's fourth largest
22 producer.

23 As discussed in our prehearing brief at
24 pages 39 and 40, these subject companies have shipped
25 to the U.S. market and have participated in

1 administrative reviews in an effort to reduce their
2 dumping deposit rates indicating their participation
3 in the U.S. market.

4 CCM was one of two mandatory respondents in
5 the Department of Commerce original investigation.
6 Mandatory respondents are selected to reflect
7 producers accounting for the largest volumes of
8 subject merchandise from the exporting country.

9 Furthermore, while subject imports were
10 concentrated in sales to metallurgical customers at
11 the time of the original investigation, producers in
12 both Brazil and China have improved the quality of
13 their product and are now fully competitive and
14 aggressively selling to chemical customers, as well as
15 metallurgical customers, throughout the world.

16 As to prices, the likely effect of such an
17 increase in subject imports would be injurious, just
18 as it was when subject imports surged into the U.S.
19 market prior to the orders.

20 By cutting their import unit values from 63
21 cents to only 47 cents, the subject imports were able
22 to nearly double their sales in the U.S. market from
23 1988 to 1990. The Commission's original determination
24 noted significant underselling by the subject imports
25 and a declining price environment.

1 Since the orders were put in place, the
2 subject producers have been constrained by the
3 discipline of the orders in pricing, and the
4 subsequent prices are therefore not indicative of
5 likely levels if the order were revoked.

6 In the first sunset reviews of these orders
7 the Commission found that significantly increased
8 volumes of subject imports were likely to "undersell
9 domestic silicon metal products to a significant
10 degree and to have significant price suppressing and
11 depressing effects within a reasonably foreseeable
12 time if the orders are revoked."

13 The evidence on the record of these reviews
14 indicates that such underselling would occur again,
15 depressing and suppressing U.S. prices.

16 Further evidence of the likely low
17 postrevocation prices comes from unit values of the
18 TIB imports from China, which are not subject to the
19 order. Their extremely low unit values are a good
20 indicator of the likely level of subject producer
21 prices if the orders are revoked.

22 As shown in Exhibit 17 to Globe's prehearing
23 brief, the import AUV of these TIB imports from China
24 has been far below the AUV of U.S. producers' U.S.
25 shipments.

1 Moreover, as U.S. price levels have
2 generally been higher than those in other major
3 markets and consistently have been far above the
4 prices in Japan, there is an economic incentive for
5 subject country producers to direct available capacity
6 at the U.S. market.

7 However, for the subject imports to seize
8 U.S. market share from current U.S. or nonsubject
9 suppliers, the subject imports would have to undersell
10 the incumbents just as they did during the original
11 investigations.

12 Given the high dumping margins of 139
13 percent for China and 91 to 93 percent for Brazil
14 determined as being likely by the Commerce Department
15 and the fact that the subject imports would have to
16 compete also with nonsubject imports, the new flows of
17 subject imports resulting from revocation are
18 virtually certain to undersell the domestic producers.
19 U.S. producers' prices would be depressed as a result.

20 Contrary to Brazilian Respondents' claims,
21 the remaining subject Brazilian producers have not
22 demonstrated the likelihood that their future
23 shipments will be at fair prices. Their current
24 deposit rates may be lower than the rates found by the
25 Commerce Department in this sunset review. However,

1 the negligible volume of imports from these suppliers
2 suggests that they cannot ship meaningful volumes
3 without dumping.

4 Respondents' arguments regarding pricing are
5 simply not credible. First, with respect to prices in
6 Europe where a large portion of Brazilian product is
7 currently sent, Respondents rely on certain data
8 giving the impression that prices in Europe tend to be
9 higher than in the U.S.

10 However, CRU data, which provide quarterly
11 prices on a delivered basis, show the U.S. prices
12 consistently being above European prices over the last
13 two and a half years, and *Ryan's Notes* shows U.S.
14 prices currently to be higher than prices in Europe.

15 Furthermore, Brazilian export statistics
16 show clearly that Brazil's exports to the U.S. market
17 are higher priced than its exports to Europe. This
18 gap has been quite significant during the period of
19 review, reaching as high as 15 cents per pound. In
20 the January through July 2006 period, the most recent
21 data available, the gap between the U.S. and European
22 average unit value is seven cents per pound.

23 While Respondents' claim about the current
24 pricing in Europe is incorrect, the likelihood of
25 renewed exports to the United States is indicated by

1 Brazilian producers' behavior in the European market.

2 MS. LUTZ: Quickly shifted export volume
3 from Japan to the EU where prices are higher. We can
4 anticipate a similar shift toward the United States if
5 the order on Brazil is revoked particularly given the
6 competition Brazil faces with China in its home market
7 and other export markets as documented extensively in
8 our prehearing brief.

9 Respondents repeatedly cite Globe's
10 statement in its response to the notice of initiation
11 that, "the U.S. for silicon metal is currently
12 relatively healthy", when in fact the current
13 condition of the U.S. industry is due largely to its
14 efforts to maintain fair trade in the U.S. market.
15 The domestic industry enjoyed operating profitability
16 in 1988, but by 1990 it was experiencing operating
17 losses.

18 Such material injury was found to be caused
19 by dumped imports from China and Brazil. Increase in
20 consumption does not mitigate the effects of dumped
21 imports. In the original investigations U.S.
22 consumption increased by more than 10 percent from
23 1989 to 1990. During this same period subject imports
24 from Brazil and China increased their market share
25 from 13 percent to 27 percent while U.S. producers'

1 market share fell.

2 Clearly increasing demand is insufficient
3 protection against dumped imports. Furthermore
4 contrary to Brazilian Respondents' claims regarding
5 three years of price stability prices have clearly
6 declined from their mid-2004 peak as shown in *Metals*
7 *Week* prices. This price decline has occurred just as
8 certain input costs, particularly energy costs, have
9 increased substantially.

10 In conclusion it is clear that revocation of
11 the orders on the subject imports is very likely to
12 lead to continuation or recurrence of material injury
13 to the domestic industry. Thank you.

14 MR. KRAMER: That concludes our affirmative
15 presentation.

16 CHAIRMAN PEARSON: Thank you for those
17 presentations. We will begin this morning's
18 questioning with Commissioner Lane.

19 COMMISSIONER LANE: Good morning, and
20 welcome to the panel. Thank you for coming.

21 I would like to start with perhaps Mr. Sims
22 and/or Mr. Perkins. As I understand it Globe right
23 now has facilities at Beverly, Ohio, and Alloy, West
24 Virginia, and you're operating those facilities. Do
25 you intend to keep both those facilities running in

1 the foreseeable future, and do they only produce
2 silicon metal at those facilities?

3 MR. SIMS: Yes. We have facilities in
4 Beverly, Ohio, two furnaces there that produce silicon
5 metal and our plan is to continue to operate that
6 facility. In Alloy, West Virginia, we have five
7 furnaces and we plan to continue to operate those
8 furnaces. In Alabama we have two furnaces and we're
9 operating one of those.

10 Niagara Falls, New York, we have two
11 furnaces and both of them are idle. Our plan is, and
12 it's with the assumption that the dumping orders will
13 continue, that we will continue to operate those
14 furnaces. If the dumping orders do not continue then
15 we have concerns about our ability to operate those
16 furnaces.

17 COMMISSIONER LANE: Okay. Thank you.

18 Now, Mr. Perkins, did you want to add
19 something?

20 MR. PERKINS: The plant at Beverly, Ohio,
21 also has three smaller furnaces that produce some
22 ferrosilicon products for the specialty ductile iron
23 industry.

24 COMMISSIONER LANE: Okay. Thank you.

25 Dr. Button, I think you were talking about

1 long-term contracts and I would like to know, and if
2 you can't put it on the record in today's hearing it
3 can be done post-hearing, what percentage of the
4 output are subject to long-term contracts, and of
5 those long-term contracts what percentage have been
6 subject to a reduction in the stated price?

7 MR. BUTTON: Commissioner, you're correct.
8 This is confidential data and we'd be happy to put it
9 into a post-hearing submission.

10 COMMISSIONER LANE: Okay. Thank you.

11 Now, Mr. Perkins and Mr. Sims, again, could
12 you tell me what percentage of your production goes to
13 the aluminum industry and what percentage goes to
14 other markets?

15 MR. KRAMER: We'd like to provide that on a
16 confidential basis.

17 COMMISSIONER LANE: Okay. Thank you. Do
18 you test and segregate each production run based on
19 iron or other content so that you can supply a
20 customer that has needs that are based on specific
21 qualities or is all production generally mixed when it
22 comes out of the furnace?

23 MR. SIMS: There's a base product that's
24 produced with the standard raw materials that go into
25 the furnace. All the furnaces essentially have the

1 same raw materials going into them, and then a base
2 product comes out, and we will do some tweaking with
3 the analysis with purification with using oxygen to
4 adjust some of the elements and then we will segregate
5 it based on the outcome of those analyses and then
6 ship it to the customers that fit those analyses.

7 Within the system at Globe we have two
8 product lines for silicon metal. We have a low iron
9 grade that's primarily for the primary aluminum
10 industry and then the all other grade. Then within
11 the all other grade there's some tweaking with
12 aluminum and calcium, but basically there's two
13 product lines.

14 COMMISSIONER LANE: Okay. Thank you. Maybe
15 I'll stick with you. Aluminum prices saw a
16 significant increase through 2005 into early 2006, but
17 then aluminum prices dropped in mid-2006. Does the
18 price for your product correlate to aluminum prices or
19 do the prices move independently of one another?

20 MR. SIMS: The prices move independently,
21 totally independently, and the prices move based on
22 the import price.

23 COMMISSIONER LANE: Okay. Thank you. Page
24 213 of the prehearing staff report indicates that many
25 U.S. purchasers of silicon metal seldom change their

1 suppliers and that seven of 14 responding purchasers
2 reported that they had not changed suppliers in the
3 last five years.

4 Could you explain why silicon metal
5 purchasers in the United States seem to do business
6 with the same suppliers for long periods of time
7 instead of shopping around for the best prices and
8 quality, and how does this affect the substitutability
9 of subject imports and domestically produced silicon
10 metal?

11 MR. PERKINS: I guess if I understand your
12 question correctly you're saying that these customers
13 do not shop around. I would say that's incorrect. We
14 are quoting various customers on a weekly or a monthly
15 basis and there's always a threat that we will lose
16 business based on pricing.

17 COMMISSIONER LANE: Dr. Button?

18 MR. BUTTON: Commissioner Lane, some
19 customers buy from multiple sources, but they can
20 switch among those sources the volumes that they
21 choose to select. Additionally if there is stability
22 in one respect, say with respect to Brazil, that would
23 perhaps be due to the fact that for this extended
24 period of time there has been an order on Brazil as
25 well as on China which encourages some stability.

1 COMMISSIONER LANE: Okay. Thank you. In
2 response to Commission questionnaires one importer
3 reported that the United States market has become more
4 focused on chemical uses as aluminum users have left
5 for Canada or other countries since 2000 while another
6 importer foresaw an increased use of silicon metal for
7 solar energy cells.

8 What changes have you observed in the U.S.
9 silicon metal industry since 2000 and what changes do
10 you anticipate in the reasonably foreseeable future,
11 and how have domestic producers adjusted to these
12 changes and anticipated changes?

13 MR. SIMS: I don't have the numbers in front
14 of me, but I don't know that --

15 COMMISSIONER LANE: I'm sorry. I can't hear
16 you.

17 MR. SIMS: I don't know that we have seen a
18 change like that. The chemical market and the
19 aluminum market are roughly the same. There was a
20 move we understand by one company to Canada and that
21 customer brought that material back into the U.S.
22 That's all I'm aware of as to moves to Canada. So we
23 haven't noticed that change from U.S. to Canada.

24 COMMISSIONER LANE: Okay. Thank you. In
25 their prehearing brief Brazilian Respondents contend

1 that due to increased U.S. demand for silicon metal
2 and domestic industry restructuring that domestic
3 industry could not satisfy aggregate demand in the
4 United States market in 2005.

5 How do you respond to this assertion and are
6 there capacity expansions planned for the domestic
7 industry in the reasonably foreseeable future?

8 MR. SIMS: That is correct. There's not
9 enough domestic production to cover the market, but
10 within Globe we have three facilities, three furnaces,
11 that are idle that can be re-energized and brought
12 back online and then of course the fairly traded
13 imports from other countries would fill the need for
14 the domestic industry.

15 COMMISSIONER LANE: Okay. Thank you.

16 Mr. Chairman, I'll wait until my next round.
17 Thank you.

18 CHAIRMAN PEARSON: Thank you, Commissioner
19 Lane. I get the next turn. Let me start by looking
20 at apparent consumption of silicon metal.

21 Dr. Button, perhaps I should direct this to
22 you because if you look at the staff report we see a
23 market that has been relatively stable in terms of how
24 we are measuring apparent consumption, a little bit of
25 up and down, but it looks like the total consumption

1 is hanging in there fairly well.

2 Does your experience corroborate those
3 numbers? Are you comfortable with our measure of
4 apparent consumption?

5 MR. BUTTON: Yes, Mr. Chairman. We are
6 comfortable that the staff report has reasonably
7 gathered the data on that point.

8 CHAIRMAN PEARSON: Okay. Thanks. The
9 Respondents on page 29 of their prehearing brief argue
10 that demand for silicon metal has been and will remain
11 strong and is increasing worldwide. Is this an
12 accurate reflection of the U.S. market? Would we
13 consider demand to be fairly strong over the last
14 couple of years?

15 MR. BUTTON: Well, I would certainly defer
16 to Globe from their point of view, but with respect to
17 the data that you point out on U.S. apparent
18 consumption indeed it does seem to be relatively
19 strong in the last few years.

20 CHAIRMAN PEARSON: For Mr. Sims or Mr.
21 Perkins, you see that reflected in the marketplace?
22 There are people there who want to buy some silicon
23 metal that you've been able to sell the product
24 relatively effectively over the last couple, three
25 years?

1 MR. PERKINS: Yes, sir. I would agree with
2 that, that it has been relatively robust.

3 CHAIRMAN PEARSON: Is there a certain
4 cyclicity in the silicon metal market relating to
5 the underlying uses? You indicated you've been 17
6 years in the business. Have you seen a cycle of ups
7 and downs in demand?

8 MR. PERKINS: Well, I guess the one thing
9 that is very, at least that is out there right now and
10 a little bit troubling is the downturn in the
11 automotive industry. There is a lot of concern from
12 our customer base and hence from us that demand is
13 going to be falling somewhat in the fourth quarter and
14 then into next year, and so that is a concern. Yes.

15 CHAIRMAN PEARSON: That's primarily for
16 aluminum use in the automotive industry?

17 MR. PERKINS: Yes, sir.

18 CHAIRMAN PEARSON: Are there some
19 nonaluminum uses for silicon metal in the automobile
20 industry?

21 MR. PERKINS: There are some silicone
22 chemicals, seals and that type of thing, that go into
23 head gaskets and that type of thing that are silicon
24 chemical related, but the aluminum side is the one
25 being most affected by the automotive downturn.

1 CHAIRMAN PEARSON: That's where we'd measure
2 the tonnage?

3 MR. PERKINS: Yes, sir.

4 CHAIRMAN PEARSON: Okay. The Respondents
5 also are indicating that as they look at the worldwide
6 market they see that as strong and growing including
7 in the countries that the subject Brazilian producers
8 currently export to. Is that a fair characterization
9 based on your sense of what's happening globally?

10 MR. SIMS: Yes. We agree with that, that
11 the worldwide market for the product is growing and at
12 the same time, though, that for instance in China the
13 production capacity is growing significantly.

14 CHAIRMAN PEARSON: Thanks for that. So we
15 have the good fortune of having a relatively strong
16 global market and U.S. market at this time then. I
17 would be correct to have that understanding?

18 MR. SIMS: Yes. That's correct.

19 CHAIRMAN PEARSON: Okay. Good. Respondents
20 have argued that if the orders were to be revoked that
21 the subject imports from Brazil would not likely
22 increase substantially, that's imports into the United
23 States, because the Brazilian producers have strong
24 ties and commitments to alternate markets especially
25 the European market where apparently we see demand

1 increasing. What's your comment on that?

2 MR. KRAMER: I think that the record before
3 the Commission contains extensive evidence that
4 demonstrates that in fact those commitments would not
5 result in maintained shipments to that market if the
6 order were revoked. The same types of representations
7 were made to the Commission at the first sunset
8 review.

9 The representations were made on behalf of
10 CBCC, RIMA and other Brazilian companies. Once the
11 order was revoked with respect to those companies
12 there was an enormous shift of supply into the United
13 States market to the point that the volume greatly
14 exceeded the preorder volume.

15 There are all kinds of other factors that
16 we've identified in our brief that also compellingly
17 show that the Brazilian product will be sold in the
18 market where prices are most favorable and where the
19 Brazilian industry is best protected from low priced
20 Chinese import competition.

21 We've provided very detailed information to
22 the Commission regarding the volume and price of
23 competing product in Europe, Japan, the other
24 principal global markets, as well as the historical
25 record with respect to Mexico and Canada. The

1 evidence shows that as you would expect that the
2 Brazilian suppliers sell their product where they can
3 realize the best price and where they're best
4 protected from competition.

5 The conduct of these subject companies prior
6 to the orders also shows how attractive the United
7 States market is to them in the absence of the
8 discipline of a dumping order. We're talking about an
9 industry that was constructed for the purpose of
10 exporting. The United States market, which is the
11 closest in terms of geographic proximity, was an
12 intended recipient of those export volumes.

13 That's exactly where the volume went until
14 it was restrained by the discipline of an order and
15 it's exactly where it came back to once that
16 discipline was removed with respect to two companies.

17 CHAIRMAN PEARSON: So are you making an
18 argument that the prices in Europe for silicon metal
19 are sufficiently below those in the United States that
20 it would be economically rational for Brazilian
21 subject producers to abandon their European customers
22 and divert instead the volume into the United States?

23 MR. KRAMER: I'm really pointing to the
24 price difference as well as other factors including
25 the very important consideration of how well sheltered

1 our market is from Chinese competition.

2 The Brazilian suppliers have been driven out
3 of markets in which the Chinese suppliers are
4 unrestrained and the situation is that in the EU to
5 which this volume has shifted there is relief in place
6 with respect to China and Russia, but in each case
7 there's a significant difference in the duty rate
8 that's in place and the Chinese companies have been
9 able to continue to ship to Europe, although at a
10 lesser volume than would have occurred absent the
11 relief.

12 So I think the record shows that the shift
13 would occur because of the economic incentives, but I
14 also think it's the case that this is not an industry
15 in which customers and suppliers are bound to each
16 other over an extended period of time and we haven't
17 seen --

18 CHAIRMAN PEARSON: Right. Although, as
19 Commissioner Lane mentioned we do have indications in
20 the staff report that there may be more fixity in
21 producer/customer relations in this industry than in
22 some others we look at, so that's why I'm trying to
23 reconcile what we see in the staff report with the
24 responses of this panel to Commissioner Lane's
25 question.

1 MR. KRAMER: Well, of course the record also
2 shows that the Brazilian suppliers once confronted
3 with low priced Chinese competition which first pulled
4 their prices down and then caused them to shift to the
5 EU from the other markets where they had a major
6 presence and to which they said they had long-term
7 commitments.

8 CHAIRMAN PEARSON: Well, my time has
9 expired, so let me turn now to Vice Chairman Aranoff.

10 VICE CHAIRMAN ARANOFF: Thank you, Mr.
11 Chairman. I join my colleagues in welcoming this
12 morning's panel. Thank you for spending this time
13 with us. As you know there are several Brazilian
14 producers who have not responded to the Commission's
15 foreign producer questionnaires in these reviews
16 including one fairly important one.

17 Data for this producer as well as other
18 missing data have been proffered by the Brazilian
19 Trade Association representing this industry, and so I
20 wanted to ask, Mr. Kramer or Dr. Button, do you have
21 any objection to the data provided by the Trade
22 Association or the Commission relying on them?

23 MR. SCHAEFERMEIER: The data provided by the
24 Trade Association -- this is Martin Schaefermeier --
25 is not complete as to that significant producer that

1 you're mentioning.

2 You can at least calculate by, you know, you
3 have certain baseline information for the entire
4 Brazilian industry such as total import volumes based
5 on the customs records and you can calculate by
6 subtracting from the producers for which you have
7 information, the relative import volumes, you can
8 calculate those or you can actually, the record
9 indicates the actual imports by that producer.

10 So certain information that may not have
11 been provided on the record can be calculated or at
12 least estimated to a good degree I think by deduction,
13 by subtracting information from the companies for
14 which you have information. As I recall the
15 information provided by ABRAFE it does not quite jive
16 with those figures.

17 When you look at what is on the record
18 subtract the data from the companies that have
19 submitted information and compare that to some of the
20 information from ABRAFE and others. It may not
21 necessarily be ABRAFE's fault, it may be just a lack
22 of communication, you know, ABRAFE and this particular
23 producer.

24 VICE CHAIRMAN ARANOFF: Okay. I'm not sure
25 what to make of that answer. That answer was you can

1 develop estimates from the data that we already have
2 on the record to reflect the missing companies, that
3 if you do that it doesn't entirely match what the
4 Trade Association has provided, but we're not talking
5 about orders of magnitude of difference, it just
6 doesn't quite line up.

7 MR. KRAMER: That's correct.

8 VICE CHAIRMAN ARANOFF: Okay. Thank you. I
9 appreciate that. If there's anything that you want to
10 add that's more specific confidentially that would be
11 very helpful because as you know we tend to look in
12 these reviews for whatever is the information that's
13 available to us and I'd like to be able to assess how
14 reliable the Trade Association information really is.

15 I'll ask this question and I don't know what
16 you can say on the public record, but Mr. Sims, what
17 can you tell us about the pending acquisition of your
18 company?

19 MR. SIMS: The company is pending
20 acquisition by a London exchange company, IML.
21 Basically what it amounts to is a change in parent
22 ownership. It has no impact on the operation or the
23 management of Globe, or the activities of Globe, or
24 the production of Globe. A lot of the owners of
25 shares of Globe now will have ownership in that

1 company also. So it's just a change of parents.

2 VICE CHAIRMAN ARANOFF: The company is
3 currently privately held and would continue to be
4 privately held?

5 MR. SIMS: No. It would be a public company
6 at that time.

7 VICE CHAIRMAN ARANOFF: It would be a public
8 company after the acquisition?

9 MR. SIMS: Yes. That's correct.

10 VICE CHAIRMAN ARANOFF: Okay. Can you tell
11 us what it is about the company or its current
12 position in the market that has made that change seem
13 like a desirable outcome and whether you think that
14 the acquisition and the company going public is going
15 to change the conditions of competition in the U.S.
16 market?

17 MR. SIMS: I'm not aware of any change in
18 the ownership of the company that will have an impact
19 on the competition.

20 MR. KRAMER: It's a change in the
21 shareholders of the company. It will become a wholly
22 owned subsidiary of that other entity. There's no
23 effect on the operations, or financing, or business
24 strategy. It would be the same management.

25 VICE CHAIRMAN ARANOFF: Okay. I mean, one

1 of the things I'm trying to get at is the Respondents'
2 argument that coming out of bankruptcy in an improved
3 financial condition has made the company strong and
4 attractive and that's why it's being acquired.

5 I don't know if you have a response to that
6 because it seems to me your response of well, we're
7 just shifting ownership from one investment company to
8 another doesn't really address -- it's either a good
9 investment or it's not and if it's a good investment
10 is it for the reasons that the Respondents have
11 indicated?

12 MR. SIMS: I think the acquisition is based
13 on the assumption that the orders in place will
14 continue and that Globe, although its financial
15 performance is improved since the bankruptcy a little
16 over two years ago that we will continue to heal and
17 be a viable company, but it's under the expectation
18 that the orders will remain in place.

19 VICE CHAIRMAN ARANOFF: Okay. Thank you.

20 MR. KRAMER: We'll provide some further
21 comment on that in our post-hearing brief.

22 VICE CHAIRMAN ARANOFF: You're certainly
23 welcome to. Yes, Mr. Kramer. Thank you.

24 MR. KRAMER: Okay.

25 VICE CHAIRMAN ARANOFF: Let me turn to the

1 issue of cumulation. It seems to me that this is very
2 central to the Brazilian producers' arguments in these
3 reviews.

4 Although in your brief and in your
5 presentation this morning you indicate that there
6 aren't really any of the kinds of discretionary
7 factors that the Commission sometimes relies on to
8 decline to cumulate in reviews the Brazilian producers
9 have come up with a list of at least six or seven
10 factors that they point to which they suggest would
11 indicate differences in conditions of competition that
12 Brazilian and Chinese imports might face in the U.S.
13 market if the orders were revoked.

14 I wanted to go through those one by one with
15 you and ask you to respond to them. The first would
16 be an indication that the trends in average unit
17 values for imports from Brazil and China have
18 assertedly been different.

19 MR. KRAMER: That's an extremely misdirected
20 and misleading argument because that's based on a
21 comparison of the unit values of shipments of
22 Brazilian products subject to the order -- I think in
23 fact it's limited to the subject producers' unit
24 values -- in circumstances in which they're shipping
25 very, very small volumes at high prices for the

1 purpose of trying to obtain reduced deposit rates to
2 Chinese material that's being imported under the TIB
3 program and is not subject to the order.

4 So, I mean, that's not a difference in
5 conditions of competition that when product is subject
6 to an order it's a higher priced than when it's not
7 subject to an order.

8 VICE CHAIRMAN ARANOFF: Okay.

9 MR. KRAMER: You can look at the conduct of
10 the two sources of supply when they're not subject to
11 the order. You can also look at what the Department
12 of Commerce has found would happen were the orders --

13 VICE CHAIRMAN ARANOFF: I take your answer,
14 although I think the point that they were making was
15 not necessarily that one set of prices was higher or
16 lower than the other or average unit values, but that
17 the trends in those values didn't tend to move in the
18 same direction over the period of review.

19 MR. KRAMER: I'm not sure what that would
20 refer to. I've got to look at their argument and will
21 respond in the brief, but I don't know of any such
22 differing trend that should cause them not --

23 VICE CHAIRMAN ARANOFF: Okay. They do have
24 a chart in their brief, so I'll invite you to look at
25 that and respond in post-hearing. Thanks.

1 MR. KRAMER: Okay.

2 VICE CHAIRMAN ARANOFF: I'll have to come to
3 the other factors in my next round since the light has
4 turned yellow. Thank you.

5 CHAIRMAN PEARSON: Commissioner Hillman?

6 COMMISSIONER HILLMAN: Thank you. I, too,
7 would join my colleagues in welcoming all of you I
8 believe back to the Commission for today's hearing on
9 silicon products which we've obviously seen in many
10 occasions. Let me start a little bit with an
11 understanding. Again, I am trying to understand the
12 differences in the conditions of competition between
13 the Chinese and the Brazilians.

14 Let me start first with trying to understand
15 your sense of the Brazilian capacity to ship more to
16 the United States.

17 Mr. Sims, you commented in your opening
18 statement that the Brazilians have a number of
19 ferrosilicon facilities that could be converted to
20 producing silicon to ship to the U.S. market. Just so
21 I understand it, first, how easy is it to do such a
22 conversion from ferrosilicon to silicon, and secondly,
23 what would be the economic incentives that would
24 encourage the Brazilians to do that?

25 MR. SIMS: First on the economic incentives

1 it's based on where they're going to make the most
2 money or where's the best margins, in ferrosilicon or
3 silicon metal.

4 COMMISSIONER HILLMAN: What are the best
5 margins? Are they for ferrosilicon or silicon?

6 MR. SIMS: In the U.S. --

7 CHAIRMAN PEARSON: Mr. Sims, please pull the
8 microphone a little bit closer if you could?

9 MR. SIMS: Okay. I'm sorry.

10 CHAIRMAN PEARSON: Thanks.

11 MR. SIMS: In the U.S. the best margins are
12 silicon metal. Now, on the conversion process it
13 depends on the particular equipment. We have four
14 furnaces that we're able to convert to silicon metal,
15 to ferrosilicon or back in just very short timeframe
16 within less than a week. More recently there was some
17 even extremely large ferrosilicon furnaces that have
18 been converted, one in Norway.

19 I understand there's an argument that large
20 furnaces are not able to be converted to silicon
21 metal, but that has been done in Norway. The
22 conversion process depends on the equipment you start
23 with. If it's going from ferrosilicon to silicon
24 metal it would require a dig out or removal of the
25 material in the furnace, not a relining, but a removal

1 of the material in the furnace.

2 Then the electrode configurations would be
3 changed from what's called a self-baking electrode or
4 Soederberg electrode to prebaked electrodes. So
5 that's a matter of pulling all of the old electrodes
6 out of the column and putting the new ones in. If the
7 furnaces are properly designed that's all there is to
8 it.

9 If the columns are not set up for prebaked
10 electrodes because they do weigh more then there might
11 be some modifications needed to the slipping
12 arrangement and to some of the structural steel to
13 hold the facilities.

14 On the start up and the conversions the
15 reason relining is not required is that the silicon
16 metal furnace produces its own crucible out of silicon
17 carbide, so it will produce a crucible and then
18 operate within that crucible and any iron
19 contamination that was in the crucible will stay
20 outside of that and not get into the metal.

21 So it's been our experience that in just a
22 few days after changing over from ferrosilicon to
23 silicon metal we're totally in grade on silicon metal.

24 COMMISSIONER HILLMAN: Has it historically
25 been the case that the margins on the production of

1 silicon are greater than those on ferrosilicon?

2 MR. SIMS: It really depends on the pricing
3 in each market and they're pretty much independent.
4 The ferrosilicon market is independent of the silicon
5 metal market pricing.

6 COMMISSIONER HILLMAN: Okay. I mean, then
7 the second issue in terms of the Brazilian capacity to
8 ship into the U.S. market would go to the extent to
9 which there is any excess capacity in Brazil.

10 The Respondents have put some numbers on the
11 record which are confidential, but I would wonder
12 whether you can say anything publicly or could comment
13 in the post-hearing brief on whether you believe there
14 is significant excess capacity, unused capacity, in
15 Brazil among the producers that are still subject to
16 the order to significantly increase their shipments to
17 the U.S. market?

18 MR. KRAMER: We'll address it in the post-
19 hearing.

20 COMMISSIONER HILLMAN: Okay. I appreciate
21 it. I then wondered if I could go to the issue of
22 what's happened in terms of the long-term contracts.

23 As I heard it, and again, I would like you
24 to comment on it, as I understood the way you're
25 describing it the vast majority of the product is sold

1 subject to a long-term contract, but that within those
2 contracts are price adjusting mechanisms in a
3 significant portion of the contracts such that when
4 the prices go down the customers in essence come back
5 to you and say okay, we'll continue to purchase the
6 volume, but we want you to invoke this price de-
7 escalator if you will.

8 Help me understand the issue of the volume.
9 I mean, to what extent do the contracts lock in a
10 certain volume? I sort of heard Dr. Button in essence
11 suggesting that you may have a contract, but that the
12 volume may also be adjusted based on the price. So
13 first let me understand when you say you have a
14 contract what is it exactly committing you to do and
15 what is it committing the purchaser to do?

16 MR. PERKINS: Most of our contracts do not
17 spell out a specific volume. A lot of aluminum --
18 well, on both sides, aluminum and silicon chemical,
19 the contract will say well, they'll give you an
20 anticipated volume and it will be based on their
21 absolute needs as time progresses, so there is no firm
22 volume that is attached to that contract.

23 So the experience that we've had if you
24 start out with a higher price at the beginning of the
25 year when it is negotiated then as time progresses if

1 that market price or that import price goes down the
2 customer has approached us and said well, you know,
3 things are not as good as we had anticipated at the
4 beginning of the year, we'll need less volume, and we
5 have typically over the years understood that to mean
6 you've got to improve your pricing, you've got to
7 lower your pricing.

8 We've got other options out there and we're
9 going to exercise those options. Typically when we go
10 back and renegotiate that price down we start getting
11 the volumes that we had anticipated at the beginning
12 year. Unfortunately the volume is at a much lower
13 price.

14 COMMISSIONER HILLMAN: Okay. If they were
15 not to purchase whatever the general volume minimums
16 or anticipated requirements it would not be viewed as
17 in some way a breach of a contract with them?

18 MR. PERKINS: No, ma'am. We have tried in
19 the past to put a take or pay clause into a contract
20 and we've never been able to negotiate that
21 successfully.

22 COMMISSIONER HILLMAN: Okay. Now, you
23 mentioned that on the flip side the customers are not
24 very eager when the prices go up to agree to any kind
25 of a price increase. Does that ever happen? Has it

1 happened?

2 MR. PERKINS: I can't remember an instance
3 where that happened.

4 COMMISSIONER HILLMAN: Where you have gone
5 back and said the prices have gone way up, our
6 contract allows for an adjustment, we're going to have
7 to seek an increase in price even during the duration
8 of a given contract?

9 MR. PERKINS: Well, most of our contracts do
10 not have a mechanism that the price can move, so we
11 set a price and when the price moves up they
12 anticipate that you're going to fulfill the volume at
13 the price that you negotiated.

14 COMMISSIONER HILLMAN: Wait. I'm sorry.
15 Maybe then I just didn't understand. Most of your
16 contracts do not have price adjusting mechanisms
17 within the terms of the contract. It's more the
18 customer comes back to you?

19 MR. PERKINS: That's correct.

20 COMMISSIONER HILLMAN: There isn't a set
21 formula that says we're going to look at the *Ryan's* or
22 the *Metal Bulletin* price?

23 MR. PERKINS: Well, some of them do. Some
24 do. Yes, ma'am.

25 COMMISSIONER HILLMAN: Okay. Okay. I know

1 there's a lot of questionnaire data in the record. My
2 problem is some of this is confidential. To the
3 extent that we do not already have explicit data on
4 the portion of your contracts that has these explicit
5 price escalator, de-escalators, that are triggered to
6 an index I just want to make sure I understand what
7 portion of your sales would be subject to a contract
8 that has these specific kind of price adjustors within
9 the terms of that contract.

10 MR. PERKINS: Yes, ma'am.

11 COMMISSIONER HILLMAN: Okay. That would be
12 very helpful. Given that the yellow light is on I
13 will come back in the next round. Thank you.

14 CHAIRMAN PEARSON: Thank you, Commissioner.
15 Turning now to Commissioner Koplan.

16 COMMISSIONER KOPLAN: Thank you, Mr.
17 Chairman.

18 Thank you to the witnesses for your
19 testimony and answers to our questions so far.

20 I'm going to start with some questions for
21 you, Mr. Kramer. First, you make an observation on
22 page 44 of your brief, "an examination of the conduct
23 of the Brazilian producers in exporting to the main
24 global markets and to North America over time shows
25 that the Brazilian producers are driven out of markets

1 where they face unrestricted Chinese competition and
2 shift their exports to markets where the Chinese
3 producers are constrained and they are not".

4 It appears to me that you're implying that
5 Brazilian imports would compete primarily with subject
6 Chinese imports rather than U.S. domestic production
7 if these orders are revoked. Other than simply
8 telling me I'm mistaken how do you respond?

9 MR. KRAMER: What we intend to be saying by
10 that statement is that what we have is two suppliers
11 that primarily supply export markets who make sales
12 based on price and then confront one another in
13 seeking to capture market share in these markets and
14 with the result that the relative pricing, you know,
15 they compete with one another. The Brazilian price is
16 pulled down toward or to the Chinese level, but in
17 doing that they are competing with other import
18 sources and with domestic suppliers in those markets,
19 so they are each engaged in price competition with one
20 another to gain market share and in doing that they're
21 offering prices lower than other suppliers.

22 COMMISSIONER KOPLAN: Do you think for
23 purposes of the post-hearing you might just expand on
24 that a bit more?

25 MR. KRAMER: I'd be happy to.

1 COMMISSIONER KOPLAN: Thank you. Appreciate
2 it. Let me stay with you if I could. You state on
3 page 32 of your brief that in 2005 the production
4 capacity of the Brazilian producers that remain
5 subject to order collectively have the fourth largest
6 silicon metal production capacity in the world and I
7 heard that again this morning in the testimony.

8 When making that statement what I'm curious
9 about is are you including Minasligas and Camargo in
10 the production capacity percentage data that you
11 bracketed in that statement in your brief? I ask this
12 because Minasligas currently faces an AD margin of
13 only 0.74 percent and Camargo has a zero margin. If
14 you are including their production capacity when you
15 make that statement what would that capacity
16 percentage be without those two in it?

17 MR. KRAMER: We are of course including
18 those suppliers because that is capacity available to
19 be shipped to the United States if the order were
20 revoked, and we would be happy to provide that other
21 number, although I think that the number that should
22 be of interest to the Commission is the number that
23 includes those companies because those companies have
24 those rates that you've cited based on administrative
25 reviews when they were subject to the order where --

1 COMMISSIONER KOPLAN: Let me just if I can
2 shorten it for you if I could, I appreciate what
3 you're saying, but what I'm wondering is how the
4 percentage data figure that you've got bracketed gets
5 modified when you subtract those two from it. Then
6 I'd have it both ways. Do you see what I'm saying?

7 MR. KRAMER: Be very happy to give you that.

8 COMMISSIONER KOPLAN: Okay. That's what I'm
9 looking for.

10 MR. KRAMER: Sure.

11 COMMISSIONER KOPLAN: Thank you. Let me
12 continue to stay with you.

13 MR. KRAMER: Okay.

14 COMMISSIONER KOPLAN: When you argue at page
15 31 of your brief that we should not accept Brazilian
16 producers' arguments that they be decumulated you
17 state that, "The Brazilian producers point to the fact
18 that the subject Brazilian producers have not exported
19 to the U.S. in recent years. In fact the Brazilian
20 producers' behavior is the same as, not different than
21 the Chinese producers. Subject producers from both
22 countries have not been exporting to the U.S."

23 "They have instead focused their exports on
24 markets where they are not subject to the discipline
25 of anti-dumping orders." The Brazilian producers'

1 behavior does not appear to me to be the same as the
2 Chinese because they are gradually eliminating margins
3 on a substantial percentage of their production
4 capacity.

5 This appears to me to be a difference in the
6 conditions of competition between the two subject
7 countries. How do you respond to that?

8 MR. KRAMER: Well, I think the first
9 response to that is notwithstanding the reductions
10 that were achieved in reviews in which small
11 quantities were shipped at high prices for a number of
12 years none of those companies has been able to ship
13 any product to the United States over an extended
14 period, perhaps the whole period, they have not been
15 able to ship in commercial quantities to the United
16 States with the discipline of the order in place.

17 So, I mean, yes, you can ship 100 tons to
18 the United States, sell it at 10 cents above the
19 market price and reduce the deposit rate, but see, to
20 me fundamentally there's no difference if you're
21 unable to participate in the United States market as a
22 commercial supplier.

23 COMMISSIONER KOPLAN: Thank you.

24 Dr. Button?

25 MR. BUTTON: Commissioner Koplan, just to

1 add, perhaps expand a certain point on that. There is
2 in one sense a distinction here that yes, the
3 Brazilian producers are engaged in administrative
4 reviews.

5 COMMISSIONER KOPLAN: Yes. That's what I'm
6 driving at.

7 MR. BUTTON: They indicate that they have no
8 interest in the U.S. market. One inquires why should
9 they be engaged in the administrative reviews seeking
10 to sell basically symbolic levels of volume to the
11 United States to get lower margins if they have no
12 intention to re-enter the U.S. market? That I think
13 is the point.

14 It suggests to me more that there's a
15 difference and it's a difference in terms of coming to
16 the U.S. I would urge the Commission to note the
17 small size of the volumes that are being used to try
18 to get the lower margins, that they are not at
19 commercially meaningful amounts.

20 COMMISSIONER KOPLAN: Thank you for adding
21 that.

22 Yes, sir?

23 MR. SCHAEFERMEIER: If I could add, the
24 Department of Commerce has found I believe with LIASA
25 that these were not commercial volumes in at least two

1 if not three administrative reviews and we can explain
2 that further in the post-hearing brief if you would
3 like us to, but there has been a specific finding that
4 at least one of the subject producers has not been
5 able to ship in commercial volumes by the Commerce
6 Department.

7 COMMISSIONER KOPLAN: I'd appreciate it if
8 you'd do that, Mr. Schaefermeier.

9 MR. BUTTON: I'll just make an interjection
10 that the relevance of that particular point is that
11 whereas it takes three years of zero or de minimis
12 margins to seek to get revocation the failure to ship
13 in commercial quantities in any one of those years
14 disqualifies that year from counting towards the three
15 year period.

16 COMMISSIONER KOPLAN: Thank you, Dr. Button.
17 I think I'll stick with you for this next one.
18 Brazilian Respondents note in their brief at page 27
19 that Globe alleged in its responses to notice of
20 institution at 18 that, "there are plans for the
21 Brazilian producers to expand their capacity". The
22 Brazilians respond by alleging that your arguments are
23 based on outdated information and point to their
24 questionnaire responses.

25 The information they provide is in brackets,

1 but you've got access to the BPI data and I wonder
2 what you can tell me now and if you could expand on
3 that, though, in the post-hearing submission?

4 MR. BUTTON: Prefaced with an overabundance
5 of caution I'd rather put all of the response in
6 the --

7 COMMISSIONER KOPLAN: That's fine.

8 MR. BUTTON: -- confidential statement.

9 COMMISSIONER KOPLAN: Sure.

10 Mr. Schaefermeier?

11 MR. SCHAEFERMEIER: The one point I would
12 like to make is we submitted this information in
13 response to the Commission's notice of institution and
14 at the time we simply looked at the website of CCM
15 which had at least at the day before the statement
16 that we quoted in our response's admission of
17 institution.

18 When we then were preparing our prehearing
19 brief we noted that information was removed from the
20 website.

21 COMMISSIONER KOPLAN: Thank you.

22 Thank you for your responses. I see my
23 yellow light is on, so I'll save the rest of my
24 questions for the next round.

25 Thank you, Mr. Chairman.

1 CHAIRMAN PEARSON: Thank you, Commissioner.
2 Commissioner Lane?

3 COMMISSIONER LANE: Thank you. Dr. Button,
4 I would like to briefly address the impairment charge
5 argument that is made on page 24 of Globe's prehearing
6 brief. Globe states that taking an impairment charge
7 can result in statistical measures that create the
8 false impression that an industry's financial
9 condition is better than it really is.

10 I understand what you are saying regarding
11 subsequent depreciation expense and return on
12 investment, but contrary to your argument that this
13 accounting creates a false impression I thought that
14 the accountants intend an asset impairment charge to
15 get the books back on track to eliminate the false
16 impression that is created by over valued assets.

17 Are you suggesting that we disregard these
18 generally accepted accounting entries?

19 MR. BUTTON: Commissioner Lane, not at all.
20 The phrase false impression is if one looks at the
21 numbers without understanding the changes that
22 underlie them. You see a sudden change. For example
23 if the return on investment goes up from one level to
24 another does it suddenly mean that the profitability
25 circumstances of that company, the financial health of

1 that company has suddenly improved by for example
2 increased sales in a more buoyant market?

3 No. That would be a false impression. One
4 needs then to look at the statistics to realize that
5 what underlies this is something more subtle and
6 perhaps not necessarily a good thing. When a company
7 is forced to take an impairment charge in that unhappy
8 circumstance it's saying that the assets that it has
9 will not achieve a return that would be otherwise
10 expected and you have to write them down.

11 That's not typically a good thing to do.
12 Having done that you thus have a change in the
13 depreciation expense that you will have in further
14 future years. Your cost of goods sold will in fact
15 decline so that you have, yes, in terms of market and
16 accounting terms a more accurate picture of this, but
17 one has to ask what has happened?

18 Has the profitability circumstance of the
19 company overall necessarily become more buoyant? Not
20 necessarily. That's what I meant by the term false.

21 COMMISSIONER LANE: Okay. Thank you. Would
22 you describe the competitive advantages and
23 disadvantages in terms of raw material costs and
24 energy/electricity costs of the silicon producers in
25 the United States, Brazil, China and nonsubject

1 producers? How have these cost factors changed since
2 the previous review?

3 Dr. Button, do you want to try that?

4 MR. BUTTON: That's a long list I suspect
5 and perhaps we can do most of that in the post-hearing
6 brief unless Globe has specific comments to make.
7 We'd be happy to respond more comprehensively in the
8 brief.

9 COMMISSIONER LANE: Okay. Thank you. China
10 appears to be able to substantially increase shipments
11 of silicon metal to the United States were the anti-
12 dumping duty order removed. Please estimate the
13 potential increase in shipments to the United States
14 and the likely impact of these shipments on the
15 domestic silicon industry.

16 MR. BUTTON: Commissioner, we believe the
17 ability to expand exports to the United States from
18 China is very large. The key factor there is one, the
19 very large capacity that they have. I may estimate it
20 in the range of one million tons. The very large
21 unutilized capacity that exists there at this time,
22 which is equal to about half of U.S. apparent
23 consumption, and if the order were revoked the U.S.
24 market prices are substantially higher and would
25 therefore be very attractive to the Chinese producers.

1 We believe that they have the ability and
2 the economic incentives and motives to bring that
3 product to the United States if that happens.
4 Entering as a low priced supplier the Chinese would
5 have to cut prices take customers from other
6 producers. We've heard descriptions both in context
7 of long-term contracts and otherwise that customers
8 themselves find the incentive of getting lower supply
9 prices very attractive.

10 That would then force the domestic producers
11 and other third-country suppliers to cut prices in
12 response. This would be very much the circumstance
13 that happened in the original period of investigation
14 between 1988 and 1990 when Brazilian for example and
15 Chinese producers competed amongst themselves
16 parlaying prices down as they sought to win and/or
17 hold customers. We fear that would happen again.

18 COMMISSIONER LANE: Okay. Thank you. How
19 much has the demand for silicon metal increased in
20 response to demand in the solar energy industry, and
21 what constrains growth in the use of silicon in this
22 industry?

23 MR. SIMS: The supply of silicon metal to
24 the solar cell industry is quite small. Worldwide it
25 is only about 10,000 tons to 15,000 tons of silicon

1 metal into the solar cell industry out of a market
2 that's over a million tons. That market is expected
3 to grow, but it's really starting from a real low
4 base.

5 COMMISSIONER LANE: Will the demand occur in
6 the United States or outside the United States?

7 MR. SIMS: Probably both. Currently, the
8 use of solar cells for the manufacture of electricity
9 is very dependent upon the prices of cells and right
10 now they're subsidized in order to try to get the
11 costs down to the grid rate for electricity. So the
12 expectation is it will grow both in the U.S., Europe
13 and Japan and other parts of the world.

14 COMMISSIONER LANE: Okay. Why did Elkem
15 stop producing silicon metal in the United States in
16 December 2005?

17 MR. SIMS: That's when they sold their
18 facility to Globe and I could only make assumptions on
19 why they decided to sell to Globe. I would assume one
20 of the reasons and probably the predominant reason
21 that it was not a profitable enough business for them
22 at that time or long-term. Also, there was a
23 restructuring.

24 The corporation was taken over by another
25 company in Norway called Orkla and they might have had

1 different ideas on the direction of the company and
2 silicon metal not being a performer financially such
3 that they decided to exit.

4 COMMISSIONER LANE: Okay. If you know
5 explain why American Alloys and AST shut down their
6 facilities.

7 MR. SIMS: AST, I believe they shut down
8 their facility as a result of the imports from Brazil
9 and China. American Alloys, as I recall their
10 problems developed with the imports from the silicon
11 metal side on the imports from Russia. It might have
12 been earlier than that, but I'm not sure about that.

13 COMMISSIONER LANE: Okay. Thank you. The
14 price of silicon metal in Europe is similar to that in
15 the United States yet they have no duty on Brazilian
16 product. Why would Brazilian product reduce the U.S.
17 price and not that in Europe?

18 MR. SIMS: I'm sorry. Could you repeat the
19 question?

20 COMMISSIONER LANE: Okay. The price of
21 silicon metal in Europe is similar to that in the
22 United States yet they have no duty on Brazilian
23 product. Why would Brazilian product reduce the U.S.
24 price and not that in Europe?

25 MR. BUTTON: There's a specific reason. The

1 Brazilians coming to the United States would be trying
2 to take customers from incumbents. This is a
3 commodity product. The only way you are going to take
4 Globe's position away from it with a customer is to
5 provide that customer an incentive to switch and that
6 incentive would be to provide a lower price.

7 That's the path that has been taken in the
8 past in the original investigation. That's the path
9 that the Russian materials took in that investigation
10 period which you saw and I expect that's how they
11 would have to do it in the United States as well.

12 MR. KRAMER: The Brazilian suppliers have
13 been selling at lower prices in the EU which is what
14 has permitted them to capture market share from other
15 suppliers in that market. They would have to engage
16 in the same conduct in the United States market to
17 gain share.

18 COMMISSIONER LANE: Okay. Thank you.

19 CHAIRMAN PEARSON: Thank you, Commissioner
20 Lane.

21 Dr. Button, in your response to Commissioner
22 Lane's question, you indicated that the Brazilians, in
23 order to gain market share in the United States, would
24 have to do some aggressive pricing.

25 Going back to where I ended up my first

1 round questions, in a discussion with Mr. Kramer about
2 the economics, the economic rationale of the subject
3 Brazilian producers shifting some of their export
4 volume that's currently going to Europe into the
5 United States.

6 How would they find it feasible to do that
7 if, indeed, they would have to price aggressively into
8 the United States? Wouldn't they make more money if
9 they just kept selling into Europe?

10 MR. BUTTON: Two points on that. First of
11 all, I'm going to shift back to a topic that's
12 relevant. It has to do with customer loyalty and
13 long-term contracts.

14 As we found in the United States market, it
15 seems that customer loyalty in that respect is
16 somewhat ephemeral. I'm going to suggest, but I have
17 not been able to document, that maybe that's a
18 worldwide phenomenon for many customers, that they
19 seek the lowest-priced product.

20 Currently, in Europe, those prices are lower
21 than in the United States, as Ms. Lutz mentioned in
22 her testimony. Three indicators were provided,
23 indicating that U.S. prices are higher than those in
24 Europe. Therefore, there is a margin there to be
25 sought, and the economic incentive would be to come

1 the United States with those volumes.

2 MR. KRAMER: May I add a point to that?

3 CHAIRMAN PEARSON: Yes.

4 MR. KRAMER: The Commission can look to what
5 happened with respect to CBCC and RIMA, and the answer
6 to that is that they sold at relatively higher prices
7 but lower than their U.S. competitors and, by that
8 means, captured a tremendous amount of volume. I
9 believe, in that case, they sold at prices higher than
10 Europe but lower than the U.S. competing prices and
11 took a tremendous amount of volume.

12 CHAIRMAN PEARSON: Dr. Button, if there is
13 sufficient information on the record, or that could be
14 put on the record, that would allow you to do a
15 comparison for us of the earnings that the Brazilian
16 subject producers might get from shifting their
17 existing sales from Europe to the United States, that
18 could be helpful.

19 I'm just trying to understand the economic
20 rationale for the shift, and it may well be there.
21 It's not entirely apparent to me from what I've seen
22 on the record so far.

23 MR. BUTTON: I would be happy to do that.

24 CHAIRMAN PEARSON: I'm not needing, for
25 purposes of this evaluation, some estimation for how

1 prices in Europe might rise if they started to lose a
2 big share of Brazilian product, but, obviously, in
3 terms of actually what happened in a dynamic
4 marketplace. It's not clear to me how many tons could
5 be pulled out of Europe before the price there would
6 respond in a way that would keep more tons from
7 getting away, if you see what I'm saying.

8 MR. BUTTON: I would be happy to address
9 that. Thank you.

10 CHAIRMAN PEARSON: Okay. If you can
11 incorporate it, that's fine. You needn't run some
12 fancy model to demonstrate that point. I think we
13 accept that it would be an effect that would be there
14 in the marketplace, and we should be mindful of it, I
15 guess.

16 MR. BUTTON: Very good, Mr. Chairman.

17 CHAIRMAN PEARSON: The Respondents maintain
18 that the subject Brazilian producers' capacity is now
19 small enough that there could be no discernable
20 adverse impact on the domestic industry if the order
21 would be revoked. Could you please address the no-
22 discernable-adverse-impact issue, give some thoughts
23 on that?

24 MR. KRAMER: This is an industry that is
25 equivalent in size --

1 CHAIRMAN PEARSON: Please pull the
2 microphone a little bit closer, if you could, Mr.
3 Kramer. Thanks.

4 MR. KRAMER: This is an industry that's
5 equivalent in size to a very substantial portion of
6 the United States industry. We provided that specific
7 number in our brief. It's an industry with a history
8 of aggressive pricing and underselling in the United
9 States market when it was unrestrained.

10 These very same producers that we're talking
11 about, subject to the order; the Commission looks at
12 their volume trends and their pricing. You look at
13 the history of injury to the United States industry
14 when there is an influx of unfairly traded material.
15 You look at the history of the Russian case, where
16 you're talking about a much smaller industry.

17 I think that it's quite evident that we're
18 talking about very significant harm that would be
19 inflicted. It doesn't approach the threshold.

20 CHAIRMAN PEARSON: Well, perhaps, but then,
21 on this record, we do see that the two highest years
22 of U.S. imports of nonsubject Brazilian silicon metal
23 have been the two years of recent profitability for
24 the U.S. industry. So somehow the U.S. market
25 absorbed this materially larger volume of nonsubject

1 Brazilian product with no adverse effect; in fact, if
2 anything, a beneficial effect. I don't know what Dr.
3 Button would think about an injurious relationship
4 there.

5 MR. KRAMER: Well, two points with respect
6 to that. The first is that those companies remained,
7 subject to reinstatement of the order. Then if you
8 look at their pricing currently and compare it to pre-
9 order pricing, it demonstrates that you're not looking
10 at the conduct you would see were the order not in
11 place and the possibility of reinstatement did not
12 exist.

13 Those suppliers are selling at lower prices
14 than domestic competitors and taking enormous market
15 share, but they are selling at higher prices than they
16 would were they not potentially subject to
17 reinstatement. That restraint is mitigating the
18 effect of --

19 CHAIRMAN PEARSON: I'll be interested to see
20 that documented in Dr. Button's follow-up analysis
21 that we discussed.

22 MR. BUTTON: Very good, Mr. Chairman.

23 CHAIRMAN PEARSON: Could you say a little
24 bit more about what accounts for the variations in the
25 specifications of silicon metal that's coming out of

1 the furnace? I get the sense that you have a pretty
2 good idea of what the specs will be coming out, but
3 not complete certainty. Is that correct?

4 MR. SIMS: That's correct. What comes out
5 of the furnace contains some higher elements like
6 calcium and aluminum that all of the customers use in
7 all of the industries, chemical and aluminum, primary
8 and secondary. So there is a removal process of those
9 elements outside the furnace, and that's pretty
10 standard technology that everyone around the world
11 uses. It's just using oxygen to remove those
12 elements.

13 CHAIRMAN PEARSON: Okay. You accept that
14 there will be some stuff coming out of the furnace,
15 something in the silicon that you probably want to get
16 rid of, and then, in essence, it amounts to a
17 secondary refining process where -- that might not be
18 the right term, but --

19 MR. SIMS: That's correct.

20 MR. KRAMER: May I interject one point that
21 I think is important for clarification? I think it's
22 important to understand that we're talking about
23 extremely small amounts of impurities and --

24 CHAIRMAN PEARSON: Right, but amounts that
25 are extremely important to certain customers,

1 obviously.

2 MR. KRAMER: -- extremely small variation in
3 these trace elements.

4 MR. SIMS: Well, on the calcium variation,
5 there's a few customers that require a .03 max
6 calcium. That's a percent, .03, a percent. Others,
7 it might be .07 percent. Aluminum levels, .01 percent
8 or .15 percent. So it's small changes, small
9 adjustments.

10 CHAIRMAN PEARSON: When you run the furnace,
11 you generally have some knowledge, I assume, of which
12 customer the product will be going to.

13 MR. SIMS: We operate the furnaces all the
14 same, regardless of the customer.

15 CHAIRMAN PEARSON: Okay. So do you have
16 identical inputs into the furnace all of the time?

17 MR. SIMS: Yes.

18 CHAIRMAN PEARSON: You try to avoid any
19 variation in the quality of the inputs.

20 MR. SIMS: Yes, except for one product. We
21 adjust the charcoal level for the iron, lower iron
22 products. Other than that, it's the same raw
23 materials going into all furnaces.

24 CHAIRMAN PEARSON: Okay. There would be
25 more adjustments generally made after the product has

1 come out of the furnace through the --

2 MR. SIMS: Yes, some minor adjustments.

3 CHAIRMAN PEARSON: Okay. Have I bothered
4 you, Mr. Kramer? Do you have a comment?

5 MR. KRAMER: I just think it's important to
6 understand that you have this continuous process with
7 the same inputs, and then there is a refining step,
8 which is post-furnace, which is an oxygenation
9 process, and, again, all of the production goes
10 through that, and then, in some instances, there might
11 be some minor variation at that finishing step. You
12 might oxygenate a little bit longer. There is, as far
13 as I know, just one instance in which there is a ladle
14 addition at that point.

15 These are extremely small differences, and
16 then the product that's produced is not something that
17 can be, and is, only sold to one customer. It can be
18 sold to other customers because you're fundamentally
19 dealing with something that's the same product, all of
20 which is at a very high level of purity.

21 CHAIRMAN PEARSON: Right. Okay. Thank you.
22 Madam Vice Chairman?

23 VICE CHAIRMAN ARANOFF: Thank you, Mr.
24 Chairman. I am going to come back and take up where I
25 left off, with cumulation questions, but before I do

1 that, there's one or two others I wanted to get in.

2 First of all, I note that there is an
3 industry trade publication that recently reported that
4 Globe had declared force majeure at its Selma,
5 Alabama, plant and that production problems appear to
6 persist and that generation problems have developed at
7 the Beverly, Ohio, plant, where a furnace has been
8 shut down.

9 So I wanted to ask Mr. Sims, have these
10 problems been resolved, and if not, how long do you
11 think it will be before these plants are running at
12 their full capacities, and have you had any trouble
13 fulfilling contracts in the meantime?

14 MR. SIMS: The force majeure was at the
15 Alloy, West Virginia plant, and it had to do with a
16 power supply to the facility. That has been
17 corrected, and it was a short timeframe, this past
18 summer, a matter of weeks. It was not related to the
19 furnace equipment or anything; it was the power
20 supply to the plant.

21 The Selma facility; we did experience a
22 significant power rate increase there, and we did not
23 declare force majeure. We have shut down one furnace,
24 and we're continuing to operate one furnace there of
25 the two.

1 I'm not aware of anything concerning the
2 Beverly plant. It's operating two furnaces, and has
3 been, on silicon metal and three on small volume
4 foundry alloys.

5 VICE CHAIRMAN ARANOFF: Okay. Thanks for
6 clarifying that. I think we've got the facts lined up
7 with the wrong plants here, but I appreciate that
8 clarification.

9 Can you tell us what the status is of
10 Commerce's changed circumstances review of RIMA, and
11 if you requested that review, can you tell us what
12 prompted that action?

13 MR. KRAMER: The status is that we are in
14 the period in which the Department of Commerce is
15 considering whether to initiate a changed
16 circumstances review. We expect a decision with
17 respect to that in the reasonably near future.

18 What prompted that action was a systematic
19 examination of whether circumstances had changed with
20 respect to RIMA's shipments to the United States and
21 whether or not there was a resumption of dumping.

22 We submitted an extensive request to the
23 Department of Commerce that outlines changes with
24 respect to RIMA's cost of production, RIMA's selling
25 prices to the United States during 2006, the exchange

1 rate and the effect on RIMA's dollar-denominated costs
2 due to those changes.

3 We also submitted information regarding
4 RIMA's channels of distribution and whether or not
5 RIMA had been forthright with the Department in the
6 reviews leading to revocation with respect to whether
7 or not it had an affiliated reseller in the United
8 States.

9 We submitted margin calculations showing, on
10 a price-to-price and on a cost basis, that RIMA has
11 resumed dumping, and we've shown that on a current
12 basis and on the basis of its sales to the United
13 States through the first six months of this year.
14 Accordingly, we expect the Department to initiate a
15 changed circumstances review, and based on all of the
16 information available to us, we expect that to result
17 in reinstatement of the order.

18 VICE CHAIRMAN ARANOFF: Okay. I appreciate
19 that information.

20 Let me go back to cumulation while I still
21 have time. I was asking you to go through a number of
22 the points that the Brazilian producers had raised as
23 potentially differences in conditions of competition
24 between Brazilian and Chinese imports into the U.S.
25 market in the event of revocation. So we had looked

1 at the first one, which was AUV Trends.

2 MR. KRAMER: May I go back to that for one
3 moment?

4 VICE CHAIRMAN ARANOFF: Sure.

5 MR. KRAMER: I had understood their comment
6 to go to the overall price levels of the two sources
7 of supply, and, in fact, it does do that, and then
8 also makes the argument, based on trends, that you've
9 referred to. The argument about the overall
10 comparison is invalid for the reasons I've described.
11 I would be very happy to determine what they are
12 saying about the trends, and I can give you an answer
13 to that in our post-hearing brief.

14 VICE CHAIRMAN ARANOFF: Okay. I appreciate
15 that.

16 The second item that they raise is that
17 there are differences in the total capacity between
18 Brazil and China. I think you've addressed your views
19 on that one. It also referred to capacity
20 utilization.

21 MR. KRAMER: May I add a point to that?

22 VICE CHAIRMAN ARANOFF: Sure.

23 MR. KRAMER: Our understanding of Commission
24 precedent is that the Commission is looking for
25 fundamental changes that would, in fact, cause a

1 difference in how these imports would impact the
2 United States market so that if you have an industry,
3 for example, where a substantial portion of the total
4 capacity has been shut down. There has been a change
5 in the products produced at the plants. It's no
6 longer a product that meets requirements of U.S.
7 customers. There has been a huge surge in domestic
8 consumption.

9 Somehow there is a fundamental change so
10 that that capacity that existed no longer can be
11 expected to come to the United States. This is a case
12 in which, yes, there has been a change, in that you
13 have two companies currently revoked, but there have
14 been counterbalancing changes in terms of capacity
15 expansion, and what we're saying is the remaining
16 industry is still very large and formidable, so it's
17 not a situation where someone no longer has capacity
18 that would have the same consequences.

19 VICE CHAIRMAN ARANOFF: Okay. I pretty much
20 understood that to be your response, but I appreciate
21 your spelling it out.

22 But on the second half of that was with
23 reference to differences in capacity utilization rates
24 on the record between the Brazilian and Chinese
25 industries. Do you have a comment on that?

1 MR. KRAMER: There is clearly a difference
2 in that respect. In my mind, this all comes back to
3 differences in degree. It's very clear that the
4 Chinese industry poses an enormous threat, for many
5 reasons, including excess capacity, and we're not
6 saying that in each and every respect the Brazilian
7 industry is the same as the Chinese industry; we're
8 saying that if you look at all of these factors, in a
9 whole series of respects, they are more alike than
10 different.

11 VICE CHAIRMAN ARANOFF: Okay. All right.
12 The next point that's raised is differences in the
13 currently applicable antidumping duty deposit rates.

14 MR. KRAMER: I think that that should be
15 completely disregarded by the Commission because the
16 Commission is trying to evaluate the implications of
17 revocation, and that's why the Department of Commerce
18 provides its assessment of the likely margin of
19 dumping. I just think that the margins achieved by
20 shipping de minimis quantities and charging above
21 market prices are not germane to what the Commission
22 has to evaluate.

23 What difference would it make if the Chinese
24 had done the same thing, had shipped at \$1.50 a pound
25 and got a zero rate and then not shipped because they

1 couldn't ship commercial quantities?

2 VICE CHAIRMAN ARANOFF: Thank you, I
3 appreciate that, and I still haven't gone through all
4 of the factors, but I will persevere. Thank you, Mr.
5 Chairman.

6 CHAIRMAN PEARSON: Commissioner Hillman?

7 COMMISSIONER HILLMAN: Let me follow up, I
8 guess, a little bit on this and try to make sure I
9 understand on this issue of the differences because,
10 again, as I sit here and look at it, you have a
11 Brazilian market in which you have a limited number of
12 players that are still subject to the order, and then
13 you have the Chinese market in which you have a very
14 large number of players, at least from what I
15 understand, none of whom would be considered, in and
16 of themselves, to be really significant players.

17 So you have one market with lots of little
18 guys and the Brazilian market with the biggest guys no
19 longer subject and four other producers there, some of
20 whom are still large, again, large players, and yet
21 you're telling me that these should be cumulated
22 because the conditions of competition and the behavior
23 of the two are enough sort of similar that we should
24 be cumulating potential imports from, again, the
25 subject Brazilian producers and this large group of

1 small Chinese producers, collectively, who have a very
2 large capacity. Again, just help me understand why
3 you think they will compete in the U.S. market in the
4 same way.

5 MR. KRAMER: This does not directly answer
6 your question. There have been some changes in the
7 Chinese industry, so it's becoming more like the
8 western industry in terms of there are some larger
9 producers. But, fundamentally, we're not saying that
10 one is the picture of the other. What we're saying is
11 that the conduct of the imports would be essentially
12 the same, and we're pointing the Commission to
13 evidence that shows that to be the case.

14 So part of this is the question of whether
15 the fact that you've got an industry that's enormous
16 and that, for various reasons, perhaps a multitude of
17 producers, poses an enormous threat. We're trying to
18 say that that doesn't mean that an industry that is
19 different in some respects and is not as large does
20 not pose a similar threat.

21 We're talking about two industries, both of
22 which are large in relation to the United States
23 industry, both of which have a history pre-order and a
24 history in other markets of engaging in very, very
25 similar conduct with the same consequences, both of

1 which are selling a commodity product where they can
2 only capture market share by undercutting other
3 suppliers and have done that to capture market share.

4 So we're saying, without regard to the fact
5 that there are some differences that, on a stand-alone
6 basis, Brazil would have the same kind of damaging
7 effect.

8 COMMISSIONER HILLMAN: Okay. Dr. Button?

9 MR. BUTTON: If I may expand a little bit on
10 that, and this may touch on some of the points that
11 Commissioner Aranoff was raising as well.

12 Respondents describe a few of these items
13 that they say are differences in conditions of
14 competition. They are really not conditions of
15 competition; they are the things that they could find,
16 and many of them, particularly having to do with the
17 average unit values, are somewhat trivial, and I'll
18 comment on that in a moment.

19 In fact, since the original period of
20 investigation, the Chinese and Brazilian producers
21 have become more similar in their relevant commercial
22 behavior in the United States market. In the original
23 period of investigation, one of the claims was that
24 the Chinese producers' product was only capable of
25 competing in the metallurgical sector and not the

1 chemical sector.

2 Well, one of the things that has happened
3 over time is, indeed, that the Chinese and the
4 Brazilian producers, all of them produce for all parts
5 of the U.S. market and are capable of supplying
6 essentially every one of the U.S. customers in every
7 geographical location as well, and they compete head
8 to head commercially around the globe.

9 Additionally, the things that remain the
10 same is the fact that they respond to pricing, just
11 like the customers do, and they are both
12 quintessentially export oriented. The Brazilians face
13 Chinese competition in the Brazilian domestic market,
14 which is another good reason for them to remain export
15 oriented.

16 The supposed differentiation in price, which
17 is contained in their brief, and Vice Chairman Aranoff
18 has focused us upon that, is basically dealing with,
19 in some cases, trivial volumes, indeed. TIB import
20 numbers and non-TIB imports merged together. In that
21 chart -- I won't mention the details -- there is a
22 flex in 2003 data, and I invite the Commission to look
23 at the subject Brazilian quantity change between 2002
24 and 2003. We're really dealing with different
25 animals. There is no economic meaning, I believe, in

1 that particular chart.

2 What counts, I would hope, is your
3 interpretation of the manner of commercial competition
4 in the U.S. market that both the Chinese and the
5 Brazilians would engage in against the domestic
6 industry and against third-country imports. The key
7 point is that they will seek customers by reducing
8 price. They have the technical capability of doing
9 it, and they have the volumes to do it. Indeed, they
10 should be cumulated.

11 COMMISSIONER HILLMAN: I guess, just so I
12 understand, on the Chinese and the TIB imports, I
13 would only ask you to comment in your post-hearing
14 brief on how you would tell the Commission to regard
15 the TIB imports. Obviously, we've addressed this
16 issue in terms of how we consider them to be subject
17 imports, how we should view them in terms of how they
18 compete or not, and what we should look at.

19 I know we have addressed this issue. I
20 would point you to Cut-to-length Steel Plate, in which
21 three commissioners, including myself, did not include
22 TIB imports in imports for consumption in terms of
23 looking at volume numbers. My question to you is,
24 should we take the same approach in this case? How
25 would that affect our analysis for China, where such a

1 large portion of the imports are TIB imports?

2 MR. BUTTON: We would be happy to respond
3 further, but, indeed, the TIB imports enter without
4 the discipline of the order. They are relatively
5 small overall in quantity, and the key message is,
6 what would the subject imports look like, price-wise,
7 if they, too, did not have the discipline of the
8 order? That's the main message that we would suggest.

9 COMMISSIONER HILLMAN: All right. I would
10 ask you to, again, just address the general issue of
11 whether they should be considered subject imports, and
12 whether they should be looked at in any way
13 differently than straight-up subject imports. Thank
14 you.

15 Let me go to the issue of, again, product
16 quality, if you will, or the level of impurities. I
17 just want to make sure I understand it. As I heard
18 you, you, in essence, are producing two -- I don't
19 want to call them grades, but two products: one, the
20 low iron; and one, the all other.

21 I'm just trying to understand what portion
22 of your sales are, in essence, of a higher grade,
23 higher purity level of product sold to someone who
24 doesn't actually specify that. In other words, how
25 much high grade are you selling to a low-grade

1 application?

2 MR. SIMS: We would have to get the precise
3 numbers for you, but it's quite small. It's probably
4 less than 10 percent, but I'm not sure.

5 COMMISSIONER HILLMAN: Okay. If there is
6 anything further you want to put, in terms of numbers,
7 on the record --

8 MR. KRAMER: I'm not sure that that question
9 was understood. Are you talking about, for example,
10 whether product that could be consumed for chemical-
11 grade production is sold to a secondary aluminum
12 company?

13 COMMISSIONER HILLMAN: Correct. I'm trying
14 to understand -- as I heard the testimony there's two
15 basic products here, the low iron and the all other,
16 and the specifications are, again -- each customer has
17 their own specifications. But what I heard maybe the
18 testimony from you, Mr. Perkins, is that a lot of the
19 product is, in essence, higher spec. than what the
20 individual customer has asked for, and I'm trying to
21 understand how often that, in fact, occurs.

22 MR. KRAMER: Just to clarify one point,
23 Globe fundamentally produces a single product which is
24 sold to all types of customers. What we're talking
25 about, the low iron, is a specialty grade that is a

1 very, very small percentage of their production. It's
2 just the one exception to all product being sold to
3 all types of customers.

4 COMMISSIONER HILLMAN: Okay. So you're
5 saying virtually all of the product that Globe
6 produces meets the highest of the specs, and,
7 therefore, virtually all of your sales to customers
8 that have a lower spec. requirement is nonetheless of
9 the higher-grade product.

10 MR. PERKINS: Yes, ma'am. I think that's a
11 good characterization.

12 COMMISSIONER HILLMAN: Okay. All right. I
13 understand. Then is a producer ever disqualified
14 because it has not sold any merchandise to a purchaser
15 recently? In other words, how often are you qualified
16 as a qualified supplier?

17 MR. PERKINS: In the aluminum sector, there
18 is not a whole lot of disqualification and
19 requalification, I think. If you met the standard in
20 the past, you probably will meet the standard in the
21 future.

22 COMMISSIONER HILLMAN: In the chemicals
23 sector?

24 MR. PERKINS: It's a little bit different,
25 but as we've pointed out, the qualification process

1 has been slimmed down so much that even if you are
2 disqualified, you can get requalified, I think, rather
3 rapidly.

4 COMMISSIONER HILLMAN: Okay. I appreciate
5 those answers. Thank you.

6 CHAIRMAN PEARSON: Commissioner Koplan?

7 COMMISSIONER KOPLAN: Thank you, Mr.
8 Chairman.

9 Mr. Kramer, I keep coming back to you. I've
10 got a question. I'm looking at the dates where you
11 submitted to Commerce for this changed circumstance
12 review with regard to RIMA, July and then the
13 submission August 18, and, in my opinion, there isn't
14 even a slim possibility that Commerce will decide that
15 before November 15. Do you disagree?

16 MR. KRAMER: I think that if a changed
17 circumstances review is conducted that is contested
18 and runs its full course, it's very unlikely that
19 there would be a decision before --

20 COMMISSIONER KOPLAN: And you do expect it
21 to be contested.

22 MR. KRAMER: That's not entirely clear to
23 me.

24 COMMISSIONER KOPLAN: Okay. But if it is
25 contested --

1 MR. KRAMER: There has been one submission
2 to this point opposing the request. I think there is
3 uncertainty regarding whether it will be contested.

4 COMMISSIONER KOPLAN: So if I'm predicting
5 that there is a likelihood it's not going to get done
6 by the 15th of November, you don't dispute that at
7 this point. You don't have a basis to dispute that.

8 MR. KRAMER: No.

9 COMMISSIONER KOPLAN: Okay. Thank you. You
10 understand why I'm asking that question --

11 MR. KRAMER: I do.

12 COMMISSIONER KOPLAN: -- because I have to
13 go on the record that's in front of me.

14 MR. KRAMER: I do. What I would say,
15 though, is that we hope that the Commission will take
16 into account all of the facts of record, including
17 whatever information is available at the time of the
18 vote, with respect to the reinstatement request.

19 COMMISSIONER KOPLAN: I appreciate that, but
20 I can't decide that for Commerce.

21 MR. KRAMER: Right.

22 COMMISSIONER KOPLAN: That's another forum,
23 and that issue is in that forum; it hasn't been
24 resolved. Do you see where I'm coming from?

25 MR. KRAMER: I understand.

1 COMMISSIONER KOPLAN: Okay. Thank you.

2 Dr. Button, let me come back to you just
3 briefly. When we discussed, in my first round, what
4 the significance of these administrative reviews are
5 that Brazil has been going through, you said that that
6 simply is evidence of their interest in participating
7 in this market. They want to come back. That's why
8 they are going through these administrative reviews.
9 Correct?

10 MR. BUTTON: Yes, sir.

11 COMMISSIONER KOPLAN: Okay. So would I be
12 incorrect that the converse would apply to China, who
13 haven't participated as to any administrative views?
14 Does that mean that they are not interested in coming
15 back here? How can you have that both ways?

16 MR. BUTTON: I think you can have this one
17 both ways.

18 COMMISSIONER KOPLAN: Well, I would be
19 interested in your explaining that to me.

20 MR. BUTTON: Okay. I believe, with respect
21 to China, looking at the past commercial behavior of
22 the large number of producers there, that if there was
23 no order, the large volume of unutilized capacity in
24 China would immediately be seeking an outlet, and if
25 the order in the United States were lifted with

1 respect to China, I think, as a commercial reality,
 2 there is no doubt, and I believe the Brazilians
 3 appearing before you would have no doubt, that that
 4 volume would come to the United States.

5 As to Brazil, on the other hand, you have
 6 those who say that they will not ship to the United
 7 States, but they have gone through the bothersome
 8 annual process of administrative reviews a number of
 9 times with the goal of seeking revocation. For me, it
 10 does make sense that they do that because I believe
 11 they would seek to come to the United States.

12 COMMISSIONER KOPLAN: That is a very
 13 creative response on the spur of the moment to my
 14 question.

15 Did you want to add to that, Mr. Kramer?

16 MR. KRAMER: I would like to make several
 17 points. The first point is that there are currently
 18 pending before the Department of Commerce two new
 19 shipper reviews.

20 COMMISSIONER KOPLAN: I'm aware of that.

21 MR. KRAMER: [*****
 22 *****
 23 *****
 24 *****
 25 *****]

1 the new shipper --

2 COMMISSIONER KOPLAN: And will that be
3 decided before the 15th of November?

4 MR. KRAMER: I don't think it will be.

5 COMMISSIONER KOPLAN: You don't think it
6 will be. Okay.

7 MR. KRAMER: There have been past attempts
8 to -- there have been at least three or four occasions
9 in the past in which requests for administrative
10 reviews or new shipper reviews were submitted to
11 Commerce, and, in each case, those failed the early
12 stages. I think there was only one final
13 determination, and I think, to some degree, first of
14 all, the differences. It's even more difficult for
15 the Chinese to attain an artificial, reduced margin
16 than it is for the Brazilians.

17 The final point is that we've had pretty
18 much continuous effort to circumvent the Chinese order
19 through multiple, repeated efforts to bring product in
20 without going through the administrative review
21 process. So the desire to reenter the market has
22 taken a different form in the case of Chinese product.
23 It's most commonly been in the form of entry of
24 product falsely identified as originating in another
25 country.

1 COMMISSIONER KOPLAN: Do you want to
2 document that for post-hearing?

3 MR. KRAMER: Sure.

4 COMMISSIONER KOPLAN: Thanks.

5 Did you have your hand up, Dr. Button?

6 MR. BUTTON: No, sir. Mr. Kramer raised
7 points that I was going to add. Thank you.

8 COMMISSIONER KOPLAN: Okay. Thank you.
9 Thank you, both.

10 Now, let me come back to Mr. Sims or Mr.
11 Perkins. On page 28 of the Brazilian Respondents'
12 brief, they state, and I quote: "Brazilian subject
13 producers cannot and have no reason to abandon the
14 European market and shift focus to the U.S. market.
15 Silicon metal prices have been higher than, or at
16 least equivalent to, the U.S. market prices in Europe
17 for some time. Silicon metal market analysts forecast
18 that this price structure will remain steady for at
19 least another five years."

20 How do you respond, particularly when the
21 Chinese are subject to orders in the EU, and the
22 Brazilians are not?

23 MR. SIMS: It's our view and our information
24 is that the pricing in Europe is currently lower than
25 the pricing in the U.S. That was more recently

1 reflected in Ryan's Notes that was published this
2 week.

3 Also, our experience in Europe has been when
4 we've had material available, we have explored
5 entering the U.K.

6 COMMISSIONER KOPLAN: You said Ryan's Notes
7 this week?

8 MR. SIMS: Yes.

9 COMMISSIONER KOPLAN: What about prior to
10 this week? Ms. Lutz?

11 MS. LUTZ: The Ryan's Notes data show two
12 prices for the week that the issue covers -- I think
13 one that covers four weeks and one that covers six
14 weeks -- so it does go back over a certain period of
15 time.

16 COMMISSIONER KOPLAN: Do we have that? Do
17 we have that in the record?

18 MS. LUTZ: I don't believe it's on the
19 record currently. We can put it on the record.

20 COMMISSIONER KOPLAN: Could you do that?

21 MS. LUTZ: Yes.

22 COMMISSIONER KOPLAN: Okay. Anything else
23 on this point?

24 MR. SIMS: We have attempted to sell product
25 into the EU market, and we've not been successful

1 there because the pricing has been lower than it would
2 be attractive for us to move product there.

3 COMMISSIONER KOPLAN: But do you discount
4 the significance of the fact that the Chinese are
5 subject to orders in the EU, and the Brazilians are
6 not? I mean, that's what I'm asking you. That keeps
7 it open for the Brazilians, does it not?

8 MR. SIMS: Yes, but also the pricing is
9 lower. We see the pricing lower in the U.K. -- in the
10 EU.

11 COMMISSIONER KOPLAN: I look forward to
12 getting whatever you're going to submit on that post-
13 hearing. Let me move on. You understand the reason
14 I'm asking the question, Dr. Button and Ms. Lutz.
15 Thank you, both.

16 Let me stay with Mr. Sims and Mr. Perkins.
17 Respondents state the following on page 31 of their
18 brief. They say that "in the past five years, freight
19 costs have been rising exponentially and today
20 represent a significant barrier for Brazilians to
21 enter the U.S. Freight costs to ship from Brazil to
22 the U.S. can be twice as high as those to ship from
23 Brazil to Europe or Japan." Do you disagree with
24 that?

25 MR. KRAMER: We don't think that's true.

1 COMMISSIONER KOPLAN: You don't think that's
2 true?

3 MR. KRAMER: No. We've got some indication
4 already that the representation that prices have
5 increased greatly is not true, and we'll try and
6 provide more information to the Commission.

7 MS. LUTZ: Let me just summarize. We looked
8 at the U.S. import statistics for silicon metal from
9 Brazil and separated out the freight and insurance
10 from the CIF price, and, in fact, the price per pound
11 reached a high level in 2001 and has decreased since
12 then. Transportation, insurance, and freight costs
13 have declined since 2001 on a per-pound basis.

14 COMMISSIONER KOPLAN: Thank you for that.

15 If the chairman will indulge me, I have one
16 question left.

17 CHAIRMAN PEARSON: The chair will indulge.

18 COMMISSIONER KOPLAN: Thank you.

19 CHAIRMAN PEARSON: I owe you a few.

20 COMMISSIONER KOPLAN: I don't keep count.

21 Mr. Kramer or Dr. Button, on page 6 of the
22 Brazilian Respondents' brief, they state, and I quote:
23 "Simcala is completely insulated from import
24 competition due to its ownership by Dow Corning, which
25 purchases --" and then there is a bracketed

1 characterization in there "-- of Simcala's
2 production."

3 I know that you don't represent Simcala, but
4 can you help me with this? Can you or your clients
5 provide any information on whether, to your knowledge,
6 Simcala receives insulation from price changes in the
7 market because of their relationship with Dow? In
8 other words, do Simcala's sales to Dow reflect
9 merchant market pricing? Do you want to do that now
10 or post-hearing?

11 MR. BUTTON: I believe we would like to
12 respond in the post-hearing brief, and there is a
13 response to that. Thank you, sir.

14 COMMISSIONER KOPLAN: Okay. Thank you very
15 much. I look forward to that. Thank you, Mr.
16 Chairman.

17 CHAIRMAN PEARSON: Commissioner Lane?

18 COMMISSIONER LANE: Thank you.

19 Dr. Button, I think these questions are for
20 you. I believe I heard some responses that silicon
21 metal is purchased primarily on price considerations.
22 However, as far as demand elasticity is concerned, I
23 believe I heard that demand will not respond
24 significantly to price changes. Do you agree that
25 this product's demand is relatively inelastic, and do

1 you agree with staff's estimate of a demand elasticity
2 of less than .5?

3 MR. BUTTON: Commissioner Lane, we do
4 believe that the demand is inelastic. We agree with
5 the staff estimates. Indeed, there are no substitutes
6 for the product.

7 COMMISSIONER LANE: Okay. Thank you.
8 Sticking with elasticities, staff has estimated
9 substitution between U.S. and subject product to be in
10 the range of 3-to-5. Do you agree with that range?

11 MR. BUTTON: We would believe it would be
12 the higher end of the range. This is,
13 quintessentially, a commodity product, and each of the
14 producers can produce the same product for each of the
15 customers.

16 COMMISSIONER LANE: Okay. Finally, you
17 already indicated a difference in capacity between
18 Brazil and China. Staff has estimated supply
19 elasticity for Brazil of 3-to-5, but for China that
20 estimate is 8-to-12. Do you agree with those ranges?

21 MR. BUTTON: Yes. We generally agree with
22 the ranges. I would note again, with Brazil, the
23 ability for them to move volume from one market to
24 another rapidly was demonstrated by their ability in
25 the past to move product from Japan to the EU and from

1 Mexico and Canada, similarly, to the EU.

2 COMMISSIONER LANE: Okay. Thank you.

3 Mr. Chairman, that's all the questions I
4 have.

5 CHAIRMAN PEARSON: Thank you, Commissioner
6 Lane.

7 At the risk of muddling things up for the
8 vice chairman, I would like to discuss a couple of
9 issues that deal with differences that may exist
10 between Brazilian and Chinese producers that could be
11 relevant to cumulation, although, I confess, I have
12 not thought this through in a systematic way. So
13 trusting that she can pick up the pieces, here I go.

14 The Respondents have indicated that Chinese
15 silicon metal capacity is a lot larger than Brazilian
16 and that there are more than 113 silicon producers in
17 China and only four subject producers in Brazil. Now,
18 I think the four subject producers would indicate a
19 consolidation since the last five-year review. The
20 113 in China may well exhibit an expansion.

21 Should we see differences in those two
22 economies, with one maybe consolidating and having
23 greater pricing discipline therefore, and the Chinese
24 economy for silicon metal expanding and getting more
25 players and perhaps being less disciplined?

1 MR. BUTTON: I would comment first that the
2 one thing that unites them both is they are
3 fundamentally export markets, export producers, so
4 they are competing on the world market. Indeed, the
5 Chinese perhaps set a particularly aggressive tone,
6 but in the world market, the Brazilians need to
7 compete against them. The Brazilians in the export
8 market coming to the United States; they have to bow
9 to the economics of their customers, and the customers
10 are price sensitive, and they, therefore, would have
11 to cut price to get market share.

12 CHAIRMAN PEARSON: Are you comfortable with
13 the basic characterization of the number of producers
14 in China perhaps being 113 or more, with only four
15 subject producers remaining in Brazil?

16 MR. BUTTON: I'm not sure of the relevance
17 of the numbers in that respect. Four for Brazil, yes.
18 The large number for China, yes. That would not
19 surprise me.

20 MR. KRAMER: I think those would be very
21 compelling differences if there were no information in
22 the record regarding the actual conduct of the
23 producers in the two industries, but --

24 CHAIRMAN PEARSON: Well, I'm getting to that
25 because my next question deals with how we should

1 evaluate the willingness and ability of major
2 Brazilian producers to obtain zero margins from
3 Commerce, compared to what seems to be a lack of
4 willingness or inability on the part of Chinese
5 producers to do the same.

6 MR. BUTTON: With respect to the remaining
7 subject Brazilian producers, they have not been able
8 to do it. They have not been able to ship the
9 commercial quantities required by Commerce
10 consistently at nondumped levels. It is not difficult
11 for any individual producer to make a sale, a small,
12 symbolic sale, and get a low margin. It's the ability
13 to do that in a manner which the Department of
14 Commerce would view as commercially meaningful and
15 indicative of nondumped, commercial behavior.

16 CHAIRMAN PEARSON: Respondents, accepting
17 that not all Brazilian producers have yet gotten a
18 zero margin. Still, within this period of review, we
19 have had significant shifting of Brazilian producers
20 from the camp that had margins to the camp that has
21 zero margins, which seems to me not an immaterial
22 change in conditions of competition, and we haven't
23 seen, to the best of my knowledge, a similar trend
24 among the Chinese producers.

25 MR. BUTTON: Well, we anticipate, as Mr.

1 Kramer has indicated with RIMA, that we're not sure we
2 believe that RIMA, indeed, is selling at nondumped
3 prices and a nondumped behavior, and it is now, as Mr.
4 Kramer indicated, before the Commerce Department.
5 Hopefully, they will investigate that.

6 It's simply the act of seeking to enter the
7 market, which is how you should interpret what the
8 Brazilians are doing. The Chinese, on the other hand,
9 also have repeatedly acted to seek to enter the
10 market. One, they have got the TIBs, which have
11 continued. That hasn't stopped, and they have sought
12 to circumvent, and the results have been criminal and
13 civil actions. They are both involved in the market.

14 CHAIRMAN PEARSON: Mr. Kramer?

15 MR. KRAMER: I'm trying to understand the
16 question in the context of what the Commission is
17 trying to evaluate in examining conditions of
18 competition. I'm having difficulty with the idea that
19 the fact that a company can ship 100 metric tons at a
20 particular price and a particular period and get a
21 zero rate calculated based on that sale and then be
22 unable to ship to the United States after having
23 obtained a zero rate. It seems to me, that is not a
24 material difference in terms of understanding the
25 conditions that would confront that company if the

1 order were revoked.

2 CHAIRMAN PEARSON: Right. My reading of
3 what's happened during the period of review is that we
4 went from a situation in which there were zero
5 shipments to the United States by nonsubject Brazilian
6 producers to a point where, although now it's
7 confidential, let me describe it as some tens of
8 thousands of tons of shipments of silicon metal from
9 nonsubject Brazilian producers to the United States.

10 That seems to me to indicate some change in
11 conditions of competition. Am I misunderstanding what
12 the term "conditions of competition" means in this
13 context? Mr. Schaefermeier?

14 MR. SCHAEFERMEIER: That's a change in
15 conditions of competition with respect to nonsubject
16 material.

17 CHAIRMAN PEARSON: Right. But they went
18 from being subject to becoming nonsubject. So is that
19 not a change in competition that we have to consider,
20 or do we have to ignore that?

21 MR. KRAMER: Well, you're trying to evaluate
22 conduct in the absence of the order.

23 CHAIRMAN PEARSON: You're the one who raised
24 conduct, I think, earlier, so go ahead.

25 MR. KRAMER: I'm basing my comments on what

1 I understand to be the Commission practice with
2 respect to this. So you have a situation in which
3 certain producers have achieved margins, zero margins
4 or de minimis margins, and then have been unable to
5 ship to the United States. The question is, what
6 significance should the Commission attribute to that
7 in comparing that source with Chinese producers who
8 have not obtained such zero margins but also remain
9 similarly constrained and unable to ship?

10 I think that there is a difference in that
11 the Brazilians were able to go through that Department
12 of Commerce process and achieve that outcome, but
13 there is no difference in terms of the implications
14 for whether or not they would engage in similar
15 conduct were the order revoked.

16 CHAIRMAN PEARSON: Mr. Schaefermeier?

17 MR. SCHAEFERMEIER: If I could just add to
18 the point I was trying to make, if I understand it
19 correctly, the Commission is trying to make a
20 prospective evaluation of what would happen if the
21 order were revoked, and the order can only be revoked
22 with respect to those Brazilian producers that are
23 currently subject to the order. Those are the four or
24 five companies that we've talked about this morning.

25 Now, I'm trying to figure out logically, if

1 you make that evaluation in that prospective manner,
2 you know that, as to those companies, they are not
3 able to ship with the discipline of the order. How
4 does that fact change if you then look at the behavior
5 of the nonsubject companies?

6 CHAIRMAN PEARSON: Well, if the statute
7 prohibits me from looking at changes that have
8 occurred over the period of review in terms of
9 shipment patterns among subject and nonsubject
10 producers, please elaborate on that for me in the
11 post-hearing; otherwise, I'll just kind of -- Dr.
12 Button, you wanted to say something?

13 MR. BUTTON: Just as a rhetorical question
14 for the Brazilians: once a Brazilian subject producer
15 has achieved its first zero margin, why does it
16 continue to ship de minimis levels of volume? Once it
17 got the zero margin, why doesn't it become a full,
18 commercial player? Why does it drag on for extended
19 years not selling commercially significant quantities?

20 We believe the answer is that they aren't
21 able to do so because of the discipline of the orders.

22 CHAIRMAN PEARSON: And not that they might
23 have better opportunities to sell quantity in Europe.

24 MR. BUTTON: Correct, because they wouldn't
25 bother to seek the administrative reviews and the

1 removal of the order if they were so happy selling in
2 Europe.

3 CHAIRMAN PEARSON: Okay. Thank you.

4 Madam Vice Chairman, over to you now.

5 Please sort out the cumulation questions.

6 VICE CHAIRMAN ARANOFF: Well, I'm not sure
7 the chairman has muddied the waters. He may have made
8 my list a little shorter and gotten us all to lunch
9 that much sooner, but there are two more items on this
10 cumulation and conditions-of-competition discussion
11 that I want to make sure to touch on.

12 These have been mentioned by my colleagues
13 in the context of other questions, but I don't think
14 in the direct context of whether they constitute
15 differences in the conditions of competition that
16 producers in these two countries would face in the
17 event of revocation.

18 One of them is the fact that Chinese product
19 is subject to trade remedies in other major markets,
20 including the European Union and, I believe,
21 Australia. Does that create a difference in the
22 conditions of competition under which the two might
23 compete in the U.S. market that would, if not be a
24 basis for not cumulating, be sort of on that side of
25 the scale?

1 MR. KRAMER: I think it's a consideration,
2 but I don't think it should be given significant
3 weight in view of all the evidence we've put in
4 regarding what would happen with respect to the flow
5 of Brazilian product. In the EU market, there is a
6 Chinese order, which, to some degree, is restraining
7 the flow of Chinese product, although there has been
8 some increase in volume.

9 So to some degree, that's a constraint the
10 Brazilians do not face, but we think that the facts
11 speak for themselves with respect to the overall
12 dynamics of in what market the Brazilian product will
13 be sold. We think there are other compelling
14 incentives that would lead to sales in the U.S.
15 market.

16 VICE CHAIRMAN ARANOFF: Okay. I should
17 point out, in that regard, because I've been trying to
18 think it through, it's kind of an anomaly in the way
19 you're arguing because your argument is that Brazilian
20 product will move towards markets where they don't
21 have to compete with Chinese product.

22 So if you follow that to its natural
23 conclusion, it would be that if the order were to be
24 revoked with respect to Brazil but not China,
25 Brazilian product would enter the U.S. market in

1 significant quantities, but if the order were to be
2 revoked with respect to both Brazil and China,
3 Brazilian product would not enter the U.S. market in
4 significant quantities because they would be pushed
5 out by China.

6 MR. KRAMER: I think if the order were
7 revoked with respect to both countries, I think it is
8 the case that there would be a very strong incentive
9 for the Brazilians to focus on the EU, where they have
10 a degree of protection from the Chinese competition.

11 VICE CHAIRMAN ARANOFF: Okay. It seems a
12 little anomalous to me.

13 In any event, one more factor that I wanted
14 to make sure that I went through with you: One of the
15 arguments that is raised by the Brazilian producers
16 with respect to cumulation is the fact that certain
17 Chinese producers or importers of Chinese product may
18 have been attempting -- in one case, they have
19 actually admitted to having evaded the order. Again,
20 does that count on the side of the scale that might
21 provide a basis for not cumulating?

22 MR. KRAMER: Well, in my mind, this is
23 another iteration of the fundamental argument that's
24 being made, which is that the Chinese are so enormous,
25 so aggressive, so injurious, that, by comparison,

1 Brazil is very different, and the Commission should
2 treat them differently. I think that, yes, it's true
3 that there have been very aggressive attempts to
4 illicitly bring Chinese product into the United
5 States.

6 That's the avenue they have chosen to try to
7 regain access to the market, but to say that does not
8 mean -- I think the Commission needs to examine bottom
9 line, are these two sources more alike than different
10 in the critical respects that will determine what will
11 happen if the orders are revoked?

12 VICE CHAIRMAN ARANOFF: Okay. I appreciate
13 all of those answers and thank you for your patience
14 for following this question through three rounds of
15 questioning, and, Mr. Chairman, I don't have any
16 further questions.

17 CHAIRMAN PEARSON: Commissioner Hillman?

18 COMMISSIONER HILLMAN: I have no further
19 questions. I want to thank the panel very much for
20 your answers.

21 CHAIRMAN PEARSON: Commissioner Lane?
22 Commissioner Koplan. Excuse me. Commissioner Lane?
23 Done. Okay.

24 Seeing no further questions from the dais,
25 are there any questions from staff?

1 MR. DEYMAN: George Deyman, Office of
2 Investigations. There are no questions from the
3 staff.

4 CHAIRMAN PEARSON: Lunch break. Okay.
5 That's the next thing on the list. Let's see. If
6 there is no objection from my fellow commissioners, I
7 think we should take a full hour today and come back
8 at 25 minutes before two. Excuse me. Before we take
9 our lunch break, does Respondents' counsel have any
10 questions for the morning's panel?

11 MR. VANDER SCHAAF: We have no questions,
12 Mr. Chairman.

13 CHAIRMAN PEARSON: Thank you. Sorry about
14 that oversight. Thank you, Mr. Secretary.

15 Now we get on to the important business of
16 lunch. I propose that we take a full hour, at least
17 until 25-to-2, which is almost a full hour.

18 Mr. Secretary, if you would please advise
19 Commissioner Okun at an appropriate time that she
20 missed a hearing in which I allowed a full hour for
21 lunch, that would be just great.

22 We are in recess until two-thirty-five.

23 (Whereupon, at 12:38 p.m., a luncheon recess
24 was taken.)

25 //

1 ABRAFE, the Brazilian Association of Ferro-alloy and
2 Silicon Metal Producers. Thank you for taking the
3 time today to hear our testimony. It's an honor to be
4 here.

5 I have been working at ABRAFE for the last
6 21 years. Twenty-one years is a long time, I admit,
7 but it is reasonable and appreciated when someone
8 works for such a long time at the same organization.
9 What is not reasonable and, indeed, astonishing is to
10 have an antidumping duty order kept in place for more
11 than 15 years.

12 This is the second time I appear before this
13 Commission to discuss the antidumping order on silicon
14 metal from Brazil. To be very honest, I look forward
15 to come to Washington, D.C., next time only on
16 vacation.

17 ABRAFE is the trade association in Brazil
18 for the ferrosilicon and silicon metal producers. We
19 assist the producers with governmental or
20 institutional issues in working with the Brazilian
21 government much the same way that trade associations
22 operate here in the United States.

23 Whenever a problem involves all or a large
24 group of producers in Brazil, ABRAFE usually takes
25 care of the problem. From our past dealings on these

1 types of issues on behalf of the Brazilian producers,
2 we have obtained a significant amount of business
3 proprietary data about their production, capacity,
4 inventories, and shipments.

5 In response to a request from the
6 Commission's staff, ABRAFE submitted to the Commission
7 the other day a questionnaire response providing data
8 for RIMA and Italmagnesio because the Commission did
9 not have that on these producers. The data we
10 provided is the type of data we have on file at
11 ABRAFE.

12 I am here today to speak about the Brazilian
13 silicon metal industry on behalf of our members of
14 ABRAFE who are still subject to the antidumping duty
15 order. At the end of this presentation, my conclusion
16 will be that the Brazilian industry's current
17 condition is dramatically different from the condition
18 at the time of the original investigation.

19 During the original investigation and prior
20 sunset review, there were eight companies that
21 produced silicon metal in Brazil: RIMA, CBCC,
22 Eletroila, Companhia Industrial Fluminense, SIBRA,
23 LIASA, MINASLIGAS, and CCM. I will talk about each of
24 them separately.

25 RIMA is no longer subject to the order

1 because the Department of Commerce revoked the order
2 with respect to RIMA's imports, effective in July
3 2001.

4 CBCC is a wholly owned Brazilian subsidiary
5 of Dow Corning since 2000, and the order against
6 Brazil was also revoked by the Department of Commerce
7 for imports from CBCC, effective in July 2002. In the
8 hearing for the prior sunset review, there was a
9 representative from Dow Corning, Mr. James May, who
10 was sitting next to me and testified supporting the
11 revocation of this antidumping order. Today, we miss
12 him but understand Dow Corning's interests have
13 already been met.

14 Another Brazilian producer, Eletroila, has
15 been redenominated Eletrosilex. Eletrosilex ceased
16 producing silicon metal in 2000, and, in September of
17 that year, this company leased its entire silicon
18 metal plant to RIMA. Eletrosilex and RIMA entered
19 into a 10-year lease agreement in September 2000, and
20 RIMA has been utilizing Eletrosilex's entire capacity
21 for its own production and exports since then.

22 So far, I have spoken about three companies
23 whose silicon metal exports had formerly been subject
24 to the antidumping duty order but are no longer
25 subject producers, according to United States law.

1 The fourth company mentioned in the
2 beginning was Companhia Industrial Fluminense. This
3 was an unsophisticated silicon metal producer with
4 very limited capacity at the time of the original
5 investigation. Companhia Industrial Fluminense ceased
6 producing silicon metal in the beginning of the
7 nineties.

8 The fifth Brazilian company that is no
9 longer a silicon metal producer is SIBRA. SIBRA
10 ceased producing silicon metal in 2000. SIBRA is a
11 subsidiary of the Companhia Vale do Rio Doce, usually
12 referred to as CVRD, and was redenominated Rio Doce
13 Manganese (RDM) in October 2003. RDM is still under
14 CVRD Group and produces manganese ore and manganese
15 ferro-alloys.

16 The three remaining companies -- LIASA,
17 MINASLIGAS, and CCM -- continue to be silicon metal
18 producers in Brazil whose imports continue to be
19 subject to the order and are today represented by
20 their attorneys from Brian Cave, LLP. The Brazilian
21 industry would have shrunk from eight to three subject
22 producers if it wasn't for a new producer.
23 Italmagnesio is a new producer of silicon metal in
24 Brazil that never exported silicon metal to the United
25 States. This company started producing silicon metal

1 approximately three years ago but has limited capacity
2 vis-a-vis other Brazilian producers.

3 In summary, we are here talking today about
4 only four producers of silicon metal in Brazil whose
5 imports remain subject to the antidumping duty order.
6 I would like to put forward a few reasons why this
7 Commission should revoke the antidumping duty order
8 for these four producers that I hope you will
9 consider.

10 The Brazilian producers still subject to the
11 order have been operating at very high levels of
12 capacity utilization and have no plans to expand their
13 capacity in the foreseeable future. The availability
14 and cost of energy in Brazil constrains Brazilian
15 producers' ability to expand production.

16 In 2001, Brazilian capacity was
17 significantly affected by an energy rationing program
18 imposed by the Brazilian government. This has
19 seriously impacted the operations of all silicon metal
20 producers, and there are forecasts in Brazil that
21 energy demand may surpass energy supply again in 2008
22 or 2009, which would oblige the Brazilian government
23 to reestablish the energy-rationing program within the
24 next two or three years.

25 Also, as explained in the Brazilian

1 producers' prehearing brief, it is very unlikely that
2 any Brazilian producer of ferrosilicon would shift to
3 producing silicon metal. Currently, among the subject
4 producers, only MINASLIGAS and Italmagnesio produce
5 both ferrosilicon and silicon metal, and they produce
6 these two products on separate furnaces due to the
7 technical constraints prohibiting the use of the same
8 furnace for the two products. The limitations on
9 product shifting exist for both economical and
10 technical reasons, and I would be happy to discuss
11 this in more detail in the question-and-answer
12 session.

13 Another aspect I would like to comment on is
14 the fact that silicon metal demand is following a
15 rising trend in Brazil. This is because of the
16 growing demand for, and production of, aluminum and
17 other products in Brazil. Home market shipments have
18 increased more than 130 percent from 2001 to 2005, and
19 imports into Brazil have increased in the period as
20 well. The Brazilian market is now absorbing more
21 silicon metal. In the future, Brazilian subject
22 producers' sales to their home market are expected to
23 increase at a high rate.

24 Contrary to what Globe has implied in this
25 proceeding, the United States market for silicon metal

1 is no longer the world's largest. Silicon metal
2 consumption in the European Union is much higher than
3 in the United States, and specialized publications
4 forecast it will increase in the years ahead.

5 Also contrary to what Plaintiff Globe has
6 implied, the United States prices do not provide an
7 incentive to shift sales from Europe to the United
8 States market. Silicon metal prices in Europe have
9 been equivalent and sometimes higher than in the U.S.,
10 which makes Europe, not the United States, the most
11 attractive market for Brazilian silicon metal.
12 Moreover, Brazilian subject producers are qualified
13 and certified by European purchasers, whereas this is
14 not the case in the United States.

15 After the incidents of September 11, with
16 new regulations and restrictions imposed for exporting
17 into the United States, freight costs to ship from
18 Brazil to the U.S. became much higher than freight
19 costs to ship from Brazil to Europe or Japan, for
20 instance.

21 These are the reasons why the Brazilian
22 subject producers, even being subject to insignificant
23 dumping margins in the United States, have their sales
24 and marketing efforts dedicated to European markets.

25 When considering the ability of Brazilian

1 subject producers to increase shipments to the United
2 States if the order was to be revoked, I respectfully
3 request the Commission to take into consideration what
4 happened after revocation of the antidumping duty
5 order on ferrosilicon from Brazil.

6 Petitioner suggests the Commission should
7 take into account the increase of nonsubject sales
8 from Brazil after revocation of the order for RIMA and
9 CBCC.

10 I believe this does not give a basis for a
11 fair analysis because the most significant portion of
12 these sales are made from a Brazilian subsidiary to
13 its parent company in the United States.

14 In conclusion, I would thank you once again
15 for your attention and would be glad to provide any
16 further clarification you might want during the
17 question-and-answer session. Thank you.

18 MR. VANDER SCHAAF: Thank you. Our next
19 witness is Robert McHale from Alcoa.

20 MR. McHALE: Good afternoon, Mr. Chairman
21 and Members of the Commission. I am Bob McHale. I am
22 director of the Global Alloying Materials Commodity
23 Council for Alcoa. I have been with Alcoa for 24
24 years, the past 18 involved with alloying materials,
25 including silicon. I am located in Cirsona,

1 Pennsylvania.

2 Alcoa supports the revocation of the
3 antidumping duty order against silicon metal from
4 Brazil. Alcoa is the world's leading producer of
5 primary aluminum, fabricated aluminum, and alumina.
6 Silicon metal is an essential input in the production
7 of aluminum. Although it represents a small
8 percentage of the final cost of aluminum, we cannot
9 produce certain alloys without it. We are the largest
10 purchaser of silicon metal, primary grade, in the
11 United States.

12 In the last five years, the use of aluminum
13 for a number of applications has increased
14 significantly. This increase has been particularly
15 important in the automotive sector. Alcoa expects the
16 demand for aluminum will continue to grow on a long-
17 term basis, both in the United States and worldwide,
18 at approximately 3 to 4 percent per year.

19 As demand for aluminum increases, so will
20 the requirement for silicon metal. In particular, we
21 are seeing increased demand in the purchasing by the
22 U.S. automotive sector as it gradually incorporates
23 more and more aluminum into its wheel assemblies and
24 other parts, something European auto makers have been
25 doing for several years.

1 Consequently, silicon metal prices
2 throughout the world remain strong. Indeed, the
3 prices for silicon metal in Europe are currently as
4 high or higher than the prices in the United States.

5 Alcoa has always relied heavily on the
6 domestic industry for its supply of silicon metal.
7 Recent consolidation in the U.S. domestic industry has
8 created a situation where one domestic supplier has an
9 overwhelming share of our business. Alcoa cannot
10 afford to be tied to a single supplier for such an
11 essential input.

12 To ensure security of supply, we began
13 purchasing from the Brazilian producer, RIMA, a few
14 years ago, after the antidumping order was revoked
15 with respect to RIMA. Importantly, notwithstanding
16 the revocation of the order with respect to RIMA and
17 our decision to purchase from RIMA, we have continued
18 to purchase substantial quantities from our domestic
19 sources. In fact, our purchases from Globe have
20 increased as has our production in connection with our
21 expanded Rockdale, Texas, facility.

22 If the order is revoked, we would continue
23 to purchase substantial quantities from domestic
24 sources, and we do not believe that we would
25 necessarily increase our purchases of foreign-sourced

1 silicon metal. We would continue to make our
2 purchasing decision based on a number of factors, but,
3 most importantly, security of supply.

4 Indeed, if the order is revoked with respect
5 to Brazil, it is very unlikely that Alcoa will
6 purchase any of the subject Brazilian producers. This
7 is because none of the subject Brazilian producers is
8 currently qualified to sell Alcoa. RIMA is the only
9 Brazilian producer that has been qualified by Alcoa in
10 the United States.

11 Before Alcoa will ever consider even a bid
12 from a potential supplier, the supplier must be
13 qualified. The qualification process is no simple
14 task. To be qualified, first, the producer must
15 demonstrate to Alcoa that it can supply sufficient
16 quantities. This is usually accomplished in
17 preliminary meetings between the supplier sales force
18 and Alcoa personnel. Then a sample of material is
19 sent to the Alcoa Technical Center in Alcoa Center,
20 Pennsylvania, where it undergoes extensive chemical
21 analysis and melt-loss screening. The sample is then
22 screened for unacceptable trace elements, such as
23 cadmium and beryllium.

24 Next, we require a full shipment of the
25 supplier's material to be delivered to our plant to

1 produce test aluminum.

2 Finally, in a large number of cases, we will
3 do an on-site, plant audit of the producer's facility.
4 This process costs us about \$30,000 to conduct.
5 Importantly, until a producer is qualified, price is
6 not a factor; that is to say, price is unimportant if
7 the supplier cannot, or has not, become certified.

8 Alcoa supports the revocation in this case
9 because it simply cannot be in a position where it is
10 forced to rely on a single source for this essential
11 input. I believe other purchasers have similar
12 concerns.

13 Moreover, Alcoa currently uses at least
14 seven different specifications of silicon. This
15 diverse product mix makes it even more important to
16 have multiple sources available to ensure that we
17 always will have sufficient quantities of each
18 specification.

19 For these reasons, Alcoa supports revocation
20 of the order with respect to Brazil. Thank you.

21 MR. VANDER SCHAAF: Mr. Heckendorn will be
22 addressing the issue of cumulation.

23 MR. HECKENDORN: Good afternoon, Mr.
24 Chairman, and members of the Commission. My name's
25 Joe Heckenorn. I'm here on behalf of the Brazilian

1 respondents.

2 With respect to cumulation, we address these
3 issues in detail in our pre-hearing briefs. I'm not
4 going to go through those arguments completely here,
5 but I would like to touch on a few key points.

6 First of all, we still take the position
7 that if the Commission considers all of the arguments
8 that Respondents' panel make today and the volume
9 arguments that we made in our pre-hearing brief,
10 you'll find there is no discernible adverse impact and
11 that cumulation is actually not permitted under the
12 statute.

13 However, even if the Commission does find
14 that there is a discernible adverse impact, and even
15 if the Commission finds that there will likely be
16 overlap of competition between Brazilian imports and
17 Chinese imports, the record evidence here indicates
18 that conditions of competition are vastly different
19 between Chinese product and the Brazilian product.

20 Earlier today the Commission touched on some
21 of these, and I'm just going to go through them
22 briefly and maybe respond a little bit to what counsel
23 had to say this morning.

24 First of all, I think one of the most
25 important differences is the differences we see in the

1 trends in the AUVs. While there may be some
2 explanation for why the prices are, why the AUVs are
3 different in value, the trends can't be explained
4 away. If you look at the trends, in every instance
5 except one Brazilian imports go down when Chinese
6 imports go up, and Chinese imports go down when
7 Brazilian imports go up, so they're actually going in
8 opposite directions. There is no relationship there.
9 Brazilian prices aren't following Chinese prices and
10 Chinese prices aren't following Brazilian prices.

11 With respect to the TIB issue, I think
12 that's just another, and we pointed this out in our
13 brief, that's just another condition of competition
14 that's different. Chinese producers are importing TIB
15 and the Brazilian producers are not. This is just one
16 additional difference in conditions of competition.

17 Now in prior cases the Commission has relied
18 on these kinds of differences in AUVs and I think the
19 comments earlier today that are these really
20 conditions of competition? They most certainly are,
21 and all you have to do is look at three of your last
22 sunset review decisions and you'll see these are the
23 precise types of things that were being addressed in
24 those opinions.

25 The second difference we mentioned in our

1 brief is differences in capacity. This one's not
2 disputed so I won't spend much time on it, but I do
3 think it's an important one because it's such a big
4 difference. Not just in the volume, not just amount
5 capacity, but the characteristics of the capacity.
6 You've got a diffuse, hundreds of producers. I was
7 told today hundred is probably a conservative
8 estimate. It's probably more like two or three
9 hundred.

10 And you have a total production capacity
11 which is far greater than the Brazilian capacity has
12 ever been. The capacity utilizations are very
13 different as well. You have remarkably low capacity
14 utilization being reported in China and remarkably
15 high capacity utilization being reported in Brazil.

16 Again, if you look at any of your most
17 recent sunset decisions, these are the kinds of things
18 that are being considered.

19 Another interesting difference that didn't
20 get put in the brief but I think is something the
21 Commission should consider is the difference in the
22 overall production levels and the changes in those
23 production levels during the period of review.

24 Throughout the period of investigation,
25 Brazilian production remained relatively the same and

1 if you take out the non-subject, the new non-subject
2 producers, it actually goes down a little bit.

3 In contrast, the Chinese production explodes
4 and doubles from 2000 to 2005.

5 Similarly, total exports. Basically total
6 exports from Brazil stays about the same, maybe even
7 goes down about 15 percent. During the same period,
8 Chinese exports increased by over 85 percent.

9 These are two countries that are operating
10 in very different worlds right now.

11 There was also discussion about the
12 differences in trade barriers faced by the Brazilian
13 and Chinese producers. I think this has always been
14 considered a condition of competition that the
15 Commission will look at, and here you've got Chinese
16 producers that have multiple dumping orders in place
17 against them around the world and you've got the
18 Brazilian producers, this is it. This is one order
19 that's been in place for 15 years in which nearly
20 every subject producer is either out of the order or
21 on its way out because it has several zeroes in a row.

22 Finally, the Chinese and Brazilian imports
23 are focused on different markets. You can see this by
24 looking at Petitioners' Exhibits 14, 15, and 16 where
25 they show Canada, Mexico and Japan. If you look at

1 those tables, you look at the volume trends, you see
2 that the Chinese are going up and the Brazilians are
3 leaving the market, basically in each instance.
4 They're not competing, they're not chasing those
5 prices and trying to steal sales from the Chinese,
6 they're just leaving and going to Europe because
7 that's their preferred market.

8 Finally, I think there's sort of a
9 qualitative condition of competition here. The
10 Brazilians are playing by the rules. They're going to
11 the DOC, they're participating in the administrative
12 interviews, they're here today. The Chinese are
13 trying to sneak things in the back door. They're
14 misrepresenting countries of origin, they're getting
15 sanctions imposed against them in other countries.
16 That's a condition of competition that the Commission
17 should consider as well.

18 We hope the Commission will exercise its
19 discretion to decumulate, if not for any other reason
20 but just to be fair.

21 MR. VANDER SCHAAF: Thank you. I'll make a
22 couple of concluding remarks.

23 In particular, we obviously have made a big
24 deal out of the issue that this order has been in
25 place for 15 years and we know the Commission's

1 practice is always to look at the conditions of
2 competition that were in place in an original
3 investigation, but I think that it behooves the
4 Commission to take a look at the differences between
5 the current situation in the U.S. market and in the
6 Brazilian industry and in the U.S. industry and what
7 it was like when the order was put in place
8 originally. And even when you reviewed this order five
9 years ago in the first sunset review.

10 During the original investigation there were
11 eight producers. Dow at that time was a producer.
12 American Alloys, Elkem, SKW, Globe, of course, Silicon
13 Metal Tech, Simetko, and Reynolds.

14 I note there was a comment today about why
15 did American Alloys close and they said it was because
16 of imports from China and Brazil, but I think they
17 closed after the order was imposed, so I don't think
18 there's much validity to that.

19 Since the period of the original
20 investigation there have been a number of
21 consolidations, mergers, sell-offs and so forth that
22 have really changed the dynamic of the domestic
23 industry. There really is only one U.S. producer that
24 sells in the open market. That's Globe. That is sort
25 of recognized as a true market participant. Now that

1 they have acquired Elkem they've consolidated that
2 production base.

3 Simcala, as we've indicated, is owned by Dow
4 Corning, one of the companies in the U.S. that has
5 always been recognized in your investigations as a
6 significant purchaser of silicon metal, so we believe
7 that, of course, provides an insulation factor for
8 Simcala with respect to imports from other countries.

9 Dow Corning of course also owns CBCC, one of
10 the non-subject producers in Brazil. So we really
11 think it would be difficult to construct an argument
12 that Simcala is going to somehow be injured by imports
13 from Brazil because Dow is going to, instead of buying
14 from their related producer in Brazil CBCC or from
15 their wholly-owned affiliate in the U.S., Simcala,
16 they're going to buy from other producers in Brazil
17 and that's going to drive down prices, I think that's
18 quite a stretch.

19 Globe emerged from Chapter 11 bankruptcy
20 protection in 2004 in a very much improved position.
21 So much so that they were able to acquire Elkem in
22 December of 2005.

23 So, although the number of U.S. producers
24 has become smaller, apparent consumption has still
25 grown and is still very high. Because Brazilian

1 producers have ceased producing silicon metal and
2 because others are no longer subject to the order, the
3 conditions facing the domestic industry from the
4 subject producers in Brazil are starkly different than
5 the case in the original investigation.

6 Looking at some of the statutory factors
7 with respect to volume, for example, in addition to
8 the issues that Mr. Melgaco identified for the lack of
9 a likelihood of increased shipments from Brazil, there
10 is other substantial evidence demonstrating that there
11 is not likely to be a significant volume of imports
12 from Brazil if the order is revoked, and we point
13 particularly to the statutory factors that the
14 Commission is required to consider.

15 You're required to consider a likely
16 increase in production capacity or existing unused
17 production capacity.

18 The evidence does not show any likely
19 increase in production capacity or any increase in
20 existing unused capacity and the record shows very
21 very little unused capacity at all among the subject
22 producers.

23 The statute requires that the Commission
24 consider existing inventories of the subject
25 merchandise or likely increases in inventories, and of

1 course the evidence on these factors show no
2 likelihood of an increase in volume.

3 You're supposed to consider existence of
4 barriers to importation into other countries other
5 than the United States, and as testified by the
6 others, there are no orders in any other country
7 besides the U.S. against Brazil.

8 You're also required to consider the
9 potential for product shifting. This is one area in
10 the statute where the statute does not use the term
11 likely, it uses the term potential. But even here,
12 the producers in Brazil who are subject to the order
13 who produce other products besides silicon metal,
14 ferrosilicon, do not use the same furnaces to produce
15 silicon metal. In order to do that they would have to
16 convert those furnaces, as Mr. Melgaco said, and as
17 we've documented in our pre-hearing brief.

18 So even before there can be any potential,
19 the furnaces have to be converted.

20 There are other considerations that provide
21 a limitation to the likelihood of significant volumes
22 from Brazil. We've documented in our pre-hearing
23 brief the existence of long-term contracts by the
24 Brazilian producers in their other foreign markets
25 including, and most particularly, the European Union.

1 They also have longstanding relationships with their
2 customers in these markets and demand for silicon
3 metal has been and will remain strong in those
4 markets.

5 Demand worldwide is also strong and growing.
6 Over the past 15 years worldwide silicon metal
7 consumption has grown at an annual rate of 3.5 percent
8 for aluminum grade silicon metal, and eight percent
9 for chemical grade silicon metal.

10 Evidence shows that this growing trend will
11 continue in the foreseeable future. This is due to
12 what are likely to be increased consumption of
13 silicons in the construction sector, electronic
14 industry, solar panels and other areas, and in the
15 production of aluminum alloys as Mr. McHale testified
16 for automotive applications and other products.

17 Non-Western silicon metal demand is also
18 rising. A widely respected proprietary report that we
19 provided quotes to and was attached to a questionnaire
20 response among one of the Brazilian producers states
21 that worldwide demand will increase from 1.5 million
22 tons per year in 2005 to approximately 1.95 million
23 tons per year in 2010. For that reason, one can
24 expect an overall worldwide growth rate of about 5.39
25 percent per year in the next five years.

1 These are independent reports printed by
2 industry experts so we think they should be given a
3 lot of weight.

4 Another limitation which Mr. McHale alluded
5 to was the requirement for certification and pre-
6 qualification. We identified in the brief, and I'd
7 like to restate, that of the 11 purchasers that
8 reported qualifying their suppliers, none of them
9 identified the Brazilian subject producers as
10 qualified suppliers.

11 Therefore, the subject producers will not be
12 able to export into the United States for some time if
13 the order against Brazil is revoked. Certification
14 and pre-qualification requirements can take as long as
15 18 months.

16 With respect to price, we think Figure 5-2
17 is very telling. There was a lot of testimony this
18 morning by the Petitioners that prices in Europe are
19 not higher, but your report at Table 5-2 says to the
20 contrary and so do a number of the reports that we
21 have attached to our brief and cited to in our pre-
22 hearing brief.

23 Unlike perhaps investigations in the past
24 involving silicon metal, currently European prices are
25 strong and equal if not higher to U.S. prices.

1 Nevertheless, prices in the U.S. market are high and
2 they've been rising over the period, and the prices
3 are higher now than they were during the period of the
4 original investigation.

5 Therefore, in addition to there being no
6 substantial evidence for a likely increase in volume
7 to significant levels, we also believe there is no
8 substantial evidence showing a likely adverse price
9 effect, either significant likely price depression or
10 significant likely price suppression.

11 We also take issue with the Petitioners with
12 respect to their comments about silicon metal being a
13 commodity product. We always have this debate about
14 the C word in ITC antidumping investigations.

15 From an economic standpoint, from your
16 textbook economics courses, silicon metal wouldn't
17 meet the qualifications of a commodity product in
18 textbook economics, but we understand the nature of
19 the Commission's investigations and the emphasis on
20 products where price is an important factor.

21 But in this regard we note that in the staff
22 report, the questionnaire responses, and some of the
23 other evidence that's been presented in this record do
24 not provide a textbook example of a commodity product.
25 There are too many examples of purchasers indicating

1 that price is not the most important factor. There
2 are too many varieties of the product. There are
3 three segments that everybody seems to recognize in
4 secondary and primary aluminum and also chemical
5 grade, and then within that you have large purchasers
6 like Alcoa who have their own particular formula.

7 This is not the dynamic of a commodity
8 product. If it's a commodity product it's a hybrid
9 commodity product for which price is not as important
10 as other commodity products.

11 The standard classification system that is
12 used has really given way to specific formulas by
13 particular customers.

14 Other issues with respect to price, all
15 publications dedicated to ferroalloys that we've seen
16 have been reporting that U.S. prices are high and firm
17 and that there exists an upward pressure on U.S.
18 silicon prices. Silicon metal prices in the U.S. have
19 been high and stable for at least three years, and
20 forecasts are that U.S. prices will remain high and
21 steady from 2006 to 2010, so we really don't agree
22 obviously with the Petitioners' comments about the
23 likelihood of price effects in this market if the
24 order is revoked.

25 We also return to the issue of Simcala being

1 owned by Dow Corning and the fact that there is
2 insulation to some extent from price-based
3 competition. But other purchasers also indicated that
4 there are preferences for the domestic product. Some
5 have an outright requirement that a certain percentage
6 of purchases be of the domestic product.

7 With respect to the recent DOC
8 administrative reviews, much was said about the
9 administrative reviews that the Brazilian producers
10 have participated in. They seem to really want to
11 underscore and downplay those proceedings. Some of
12 those administrative review requests were not
13 requested by the foreign producers, they were
14 requested by the domestic Petitioners.

15 This is one of the most litigious industries
16 that we will come across in the dumping realm. If
17 there are imports into the United States there is a
18 request for an administrative review.

19 Even when a producer is terminated from an
20 order this industry petitions to get them back in
21 under the order. It is an extremely litigious
22 industry. You can ask anybody who reports on this
23 industry about it. It is very unique.

24 But with respect to those administrative
25 reviews, the Department of Commerce will not institute

1 an administrative review unless you have bonafide
2 sales. One of the factors that Commerce takes into
3 account is the quantity of those sales. They also
4 take into account whether or not the sale was at arm's
5 length.

6 The Department of Commerce will not
7 institute if there isn't a bonafide sale.

8 So there's nothing underhanded or improper
9 about those administrative review requests. In fact I
10 don't think it's ever improper or underhanded or shows
11 some kind of improper intent to ever petition your
12 government for anything. If there is a law and a
13 legal provision for doing something, by doing it you
14 should not be somehow inferred to be doing something
15 wrong or having an improper motive. I really really
16 take issue with the Petitioners' implications from the
17 morning panel.

18 In any event, in those proceedings LIASA,
19 CCM, and Minasligas have received the zero dumping
20 margins that we've identified, and there's more to
21 those antidumping proceedings than just comparing the
22 foreign market price to the home market price. The
23 Commerce Department can also look at cost of
24 production and whether or not a producer is selling
25 below their cost of production.

1 So these proceedings do have meaning and
2 they do have effect, and they do provide an
3 implication that the foreign producers in Brazil who
4 are still subject to the order can and have shipped
5 without dumping.

6 As Mr. Heckendorn said, the exhibits
7 provided in the Petitioners' pre-hearing brief where
8 they compare unit values and quantities in other
9 markets like Europe and Canada and Mexico and the
10 price trends they provide show that the Brazilians are
11 not in there to dump and not under-compete and under-
12 price the domestic market and other importers. And
13 it's very telling, their examples with respect to
14 China and Brazil in the top two lines of every one of
15 those charts.

16 What is Brazil doing? They're not competing
17 with China on price. Their quantities are going down,
18 the Chinese quantities are going up, the Chinese
19 prices are going down, and the Brazilian prices are
20 either staying stable or they're pulling out of the
21 market altogether.

22 Even the evidence they provide on the record
23 doesn't support their argument.

24 With respect to impact, I've already touched
25 on this slightly. We believe that because of the

1 consolidation, the lending out of bankruptcy in a good
2 condition by Globe, we think the industry is
3 definitely not in a vulnerable state.

4 The Petitioner even admitted that the
5 domestic industry is doing well. In its response to
6 the notice of institution, Globe stated, "The U.S.
7 market for silicon metal is currently relatively
8 healthy." This should be viewed as an indication that
9 after these long 15 years, the time is finally ripe
10 for this agency to revoke the antidumping order with
11 respect to Brazil.

12 After it emerged from Chapter 11 bankruptcy
13 protection, when silicon metal prices were hovering at
14 seven year highs of more than 80 cents per pound,
15 Globe's CEO was asked in a press report whether it
16 would boost production. Its CEO stated that
17 production expansions would depend on market
18 conditions. He acknowledged at that time that "The
19 market is strong at this time, and we feel it will
20 remain this way for a significant period of time, but
21 we need to see a little more data and information to
22 confirm this."

23 Well, what they did is acquire Elkem the
24 next year. So I think their viewpoint that the market
25 is strong and that they needed to see whether it would

1 stay that way has been confirmed, otherwise they would
2 not have acquired Elkem.

3 The fact that Dow Corning chose to purchase
4 Simcala in 2003 also is testament, we believe, to the
5 overall positive health of the industry.

6 None of the data, gross profits, operating
7 income, none of those data show any indication of an
8 industry that is vulnerable.

9 In addition, with an antidumping duty
10 imposed on Russia recently, the industry is even less
11 vulnerable than the data would suggest.

12 Another factor that eliminates any chance of
13 vulnerability is the demand forecast. As we've
14 indicated here today and as we provided in our pre-
15 hearing briefs, the forecasts are that demand will
16 continue to grow, not only in the U.S. but in other
17 countries as well.

18 In sum, the record evidence demonstrates
19 that apparent U.S. consumption is expected to increase
20 in the reasonably foreseeable future, negating any
21 likelihood that revocation of the order on Brazil will
22 lead to a recurrence of material injury to the
23 domestic industry.

24 Thank you, and we will be happy to entertain
25 your questions.

1 CHAIRMAN PEARSON: Thank you for those
2 presentations.

3 Let me welcome all of you, especially Mr.
4 Melgaco, for your long journey to the United States.
5 I hope that your schedule allows you to stay for a few
6 days of vacation. September is a good time to be here
7 on holiday because the larger crowds from the summer
8 time tend to dissipate, so you've got the city to
9 yourself to some degree. So welcome.

10 I get to start this afternoon.

11 Let me begin with a little more discussion
12 of the global demand outlook for silicon metal. I
13 think I heard from you, Mr. McHale, that you were
14 talking about a three to four percent demand growth
15 projection. Was that just for the United States or
16 was that globally?

17 MR. McHALE: That was global numbers, three
18 to four percent.

19 CHAIRMAN PEARSON: How would you see the
20 U.S. market shaking out relative to the global market?

21 MR. McHALE: Pretty much the same. I think
22 the question mark would be the automotive, which was
23 brought up earlier, but the true automotive demand,
24 the number of cars, is growing. What is changing is
25 the position that the big three have. So it's simply

1 a game of checkers where the production is moving to
2 the imported product, whether that's made in the
3 States or that's made outside of the United States,
4 but they still need four wheels and a spare tire.

5 CHAIRMAN PEARSON: Are there any differences
6 currently between the amount of aluminum used in one
7 of the big three products versus the other firms that
8 either sell vehicles to the United States or
9 manufacture them here?

10 MR. MCHALE: Generally the same. When you
11 start talking SUVs and some engine blocks and
12 transmissions, they're just bigger in size so there's
13 more weight in a larger vehicle.

14 CHAIRMAN PEARSON: So the potential would be
15 for a decrease in aluminum and silicon metal
16 consumption if the big three down-size either their
17 total number of vehicles or the size of their
18 vehicles?

19 MR. MCHALE: Correct.

20 MR. VANDER SCHAAF: One thing that Mr.
21 McHale mentioned to me yesterday about the European
22 auto producers is that they've been very good about
23 using more aluminum in other vehicles, though, to
24 decrease the weight of the vehicle and improve fuel
25 efficiency. I don't know the extent to which that

1 would be a counter-balance.

2 MR. MCHALE: There's been more aluminum and
3 magnesium applications in the Audis and the BMWs and
4 some of the German cars than there have been in the
5 United States.

6 CHAIRMAN PEARSON: And that would be one of
7 the factors that's contributed to a relatively higher
8 rate of growth in consumption in Europe?

9 MR. MCHALE: Correct.

10 CHAIRMAN PEARSON: Mr. Vander Schaaf, I
11 think you made reference to a projection between 2005
12 and 2010, the global demand would likely increase by
13 something in excess of five percent?

14 MR. VANDER SCHAAF: Yes, that's what the
15 reports show that we've attached to our brief. Those
16 are proprietary reports so I can't identify what they
17 are, but we did provide them as attachments to a
18 questionnaire response where those were requested, and
19 also attachments to the brief.

20 CHAIRMAN PEARSON: The slight difference in
21 numbers between those that you cited and Mr. McHale
22 cited, those would be due to just different people
23 making the estimates? Would you argue the direction
24 is the same? It's just quibbling over the exact
25 amount?

1 MR. VANDER SCHAAF: Yes. Even among the
2 reports we submitted, they all have a little bit
3 slightly different view on how much the market will
4 grow, but they all generally are in the same range and
5 they're all anticipating and forecasting continued
6 growth.

7 CHAIRMAN PEARSON: Mr. Melgaco, you had
8 mentioned in your statement that demand in Brazil has
9 grown quite rapidly in recent years, increasing by
10 more than 100 percent, I believe?

11 MR. MELGACO: One hundred thirty percent for
12 five years.

13 CHAIRMAN PEARSON: That's very robust
14 growth. Is that growth projected to continue?

15 MR. MELGACO: Pardon?

16 CHAIRMAN PEARSON: Do you expect that rate
17 of growth to continue in Brazil?

18 MR. MELGACO: Well, the demand was very low
19 and now is developing products that contain silicon
20 metal. Now that's why this increase rapidly, big one.

21 It continue to increase, but probably less,
22 a rate lower than this one, but still strong.

23 CHAIRMAN PEARSON: And has the increase in
24 consumption in Brazil been related to an increase in
25 the production of aluminum or for other reasons?

1 MR. MELGACO: Aluminum contributed, but
2 there are other reasons for our automotive industry.
3 The importers from parts now are being produced there
4 and so forth.

5 CHAIRMAN PEARSON: So there's a general
6 agreement between the Petitioners and the Respondents
7 that we do expect demand to continue to grow worldwide
8 and maybe some slight differences in terms of the
9 specific outlook, but we're on the same page on that.

10 MR. VANDER SCHAAF: I believe so, yes.

11 CHAIRMAN PEARSON: Mr. Melgaco, you had
12 mentioned that the costs for shipping silicon metal to
13 the United States were high relative to shipping I
14 think to Japan or the European Union. Could you
15 discuss that in a little more detail? Is that related
16 exclusively to the security efforts that have gone
17 into effect since the terrorist attacks five years
18 ago?

19 MR. MELGACO: One of the things that
20 contributes for this was the lack of ships to the
21 States due to the, after September 11th, the
22 restrictions they put on transport. So this increased
23 strongly the price of transport from Brazil to the
24 United States.

25 CHAIRMAN PEARSON: Is it related also in

1 part to the availability of empty containers to be
2 shipped to the United States? The whole question of
3 whether there are containers available for back-haul
4 to the United States?

5 MR. MELGACO: This lack of containers, I
6 think it's a world problem, all over the world.
7 Brazil has too.

8 But as far as I know, it's due to the
9 restrictions to transport for the Customs authorities
10 that increase the price. That's it. That's as far as
11 I know.

12 MR. VANDER SCHAAF: I think being involved
13 in a number of different commodities that I've seen,
14 the huge demand for shipping from China to the U.S.
15 has really put a crimp on availability of vessels. I
16 think in every sector.

17 It's pretty easy to find a vessel to go from
18 the U.S. to China and they're shipping them empty or
19 bringing scrap metal or finding whatever they can to
20 put in those vessels to save costs, but I've seen a
21 number of examples where this historically enormous
22 demand for products coming out of China to the West
23 Coast has really put a crimp in worldwide availability
24 for vessels.

25 I don't know if it's and East Coast/West

1 Coast thing, but I'm seeing a lot of these examples
2 where shipping times are longer, and so forth because
3 all the vessels are occupied coming out of Shanghai
4 and other ports in China.

5 CHAIRMAN PEARSON: Can you clarify, please,
6 is silicon metal shipped in containers or is it
7 shipped in dry bulk vessels?

8 MR. MELGACO: Mostly in containers.

9 CHAIRMAN PEARSON: So there is, perhaps
10 separate from the issue of availability of vessels is
11 the question of availability of containers, or
12 particularly empty containers that want to get from
13 one place to another.

14 MR. MELGACO: Correct.

15 CHAIRMAN PEARSON: Mr. McHale, do you have
16 anything to add?

17 MR. McHALE: The material generally is sold
18 in what are called super sacks, which is one metric
19 ton bags. Those bags would be shipped typically in a
20 container.

21 CHAIRMAN PEARSON: Okay. Then obviously
22 lifted out by some type of crane and then put directly
23 on a truck. Okay.

24 Mr. Melgaco, since I've been asking you
25 questions, perhaps I could ask about the business

1 commitments that Brazilian producers have with
2 customers in the European Union or with other
3 countries, and I should ask now specifically about the
4 Brazilian producers that are subject still to the U.S.
5 antidumping duty.

6 Do you know from your conversations with
7 those business executives, are they quite likely to
8 stay with those customers? Or would they be more
9 likely to shift to the United States if the order was
10 revoked?

11 MR. MELGACO: They are certified by, the
12 Brazilian producers are certified by European
13 consumers. The price in our files in Europe is a
14 little bit better than the United States. I don't
15 know, I don't think why they would send to the United
16 States if the market is open, the relationship between
17 consumer and producer is very good, we had a long time
18 relationship between them. I don't know why it would
19 change.

20 CHAIRMAN PEARSON: Okay. Thank you very
21 much. The light is changing.

22 Vice Chairman Aranoff, over to you.

23 VICE CHAIRMAN ARANOFF: Thank you, Mr.
24 Chairman, and I too would like to welcome the
25 afternoon panel and thank those of you who have

1 traveled to be with us this afternoon in particular.

2 I'd like to go back to the issue of
3 qualification or certification. You argue in your
4 brief that the need to become qualified or certified
5 presents a barrier to entry, but what I read in your
6 brief and what I heard Mr. McHale testify to today was
7 a certification process that would seem to take a
8 period of time well within the one to two years that
9 we might perhaps look at in terms of what is the
10 reasonably foreseeable future. So it seems perfectly
11 logical to me that there might not be any subject
12 Brazilian producers who are qualified as U.S.
13 customers now. Why bother, as you know, when the
14 order has been in place for as long as it has, but
15 that they could easily go through that process
16 expeditiously if the order were to be revoked, so it
17 wouldn't really present much of a barrier to entry.

18 Do you have a response to that?

19 MR. VANDER SCHAAF: Well, it's true that the
20 Commission, it's pretty clear from the Commission's
21 precedent that your forecast for foreseeable future is
22 probably broader than the time it takes for someone to
23 be certified or qualified unless they fail and have to
24 go through it again, but it raises a couple of issues.

25 First, it suggests this isn't a commodity

1 product, first of all, because you don't even consider
2 availability and how that weighs into price, or
3 reliability of supply and how that weights into price,
4 or quality and how that weighs into price until you
5 meet the minimum thresholds for qualification and
6 certification. Then you start talking about price.
7 That's not what we see in commodity products.

8 So we pointed out for purposes of
9 identifying this product, it just doesn't meet the
10 paradigm of a commodity product like the Commission
11 sees in most investigations.

12 But secondly, it does provide an indication
13 of if there is going to be a ny kind of surge in
14 miports that the Petitioners are predicting, when
15 would it occur?

16 Well, it certainly isn't going to occur this
17 year or next year. Alcoa, for example, is in the
18 process now of securing bids for their purchases in
19 2008. They will lock into their long-term contracts
20 in what, October, Mr. McHale?

21 MR. McHALE: We will probably award it
22 sometime mid to late October.

23 MR. VANDER SCHAAF: So the foreign producers
24 who are subject to the order in Brazil can't get
25 certified for these sales in 2007. The earliest they

1 could ever be in the market is 2008, assuming that
2 they come in well ahead of time, get qualified and
3 certified, and then are eligible to bid on his round
4 of bids in 2007 for the 2008 market year. So that's
5 one indication.

6 The second is these bidding process and
7 qualification requirements then provide you with a
8 pool of potential suppliers. I'm not aware of any
9 situation where a major purchaser, at least a major
10 purchaser, dedicates all of their purchases to any one
11 supplier. So it's part and parcel of their purchasing
12 decisions to require these certification and pre-
13 qualification requirements. That allows you to then
14 bid. Then they distribute their purchases among
15 qualified purchasers.

16 So I don't see purchasers buying from a
17 single supplier.

18 The other thing that the qualification and
19 certification requirement seems to be related to and
20 is sort of another indication of is the fact that
21 these purchasers have reported in their questionnaire
22 responses and as it's been reported in the staff
23 report, tend to stay with their suppliers. They don't
24 change suppliers very frequently.

25 I think that is another thing that may be

1 related to the fact that this isn't necessarily a
2 commodity product. Purchasers become familiar with
3 their suppliers, suppliers become familiar with the
4 formula that the purchaser demands, and why rock the
5 boat or change suppliers when they meet your
6 requirements and they produce a product that meets
7 your recipe demands.

8 But I don't think anybody has a
9 certification or a qualification requirement that
10 takes longer than three years, or something like that,
11 which the Commission may look at as the reasonably
12 foreseeable future.

13 VICE CHAIRMAN ARANOFF: Okay, let me follow
14 up on a few things you said there.

15 Mr. McHale, Mr. Vander Schaaf just mentioned
16 that you are in the process of awarding contracts for
17 2007. Can you tell us, does your company award all
18 its volume in long term contracts? And how long are
19 those contracts?

20 MR. McHALE: Generally our agreements in the
21 United States and Canada run for one calendar year.

22 VICE CHAIRMAN ARANOFF: So you have them up
23 to bid in the fall and award them for the following
24 calendar year.

25 MR. McHALE: Correct.

1 VICE CHAIRMAN ARANOFF: And you usually
2 award a long term contract for that year to several
3 suppliers in order to maintain diversity of supply?

4 MR. McHALE: In the past we have used
5 several suppliers. Unfortunately this year there's
6 less than several with the acquisition of Elkem.

7 VICE CHAIRMAN ARANOFF: Okay.

8 I know one of the discussions we had this
9 morning was that some purchasers specified they
10 require or want, I'm not sure what the right word is,
11 a certain percentage of domestic supply. Is it
12 important to you to have domestic supply? And why?

13 MR. McHALE: We have largely depended on
14 domestic supply because of service issues. Some of
15 the importers in the last few years have invested in
16 warehouse space and stored material and their promised
17 performance and reliability have improved greatly.

18 VICE CHAIRMAN ARANOFF: You indicated in
19 your testimony that you've been importing product from
20 RIMA in Brazil. Compared to your domestic suppliers
21 now and historically, do they provide the same level
22 of service and the same quality of product? Or are
23 you only relying on them to sort of fill in where you
24 absolutely have to?

25 MR. McHALE: No, RIMA has stepped up to one

1 of our higher purity consuming plants. The very low
2 iron chemistry that we require down at Rockdale,
3 Texas. They have warehouse material for us in Texas
4 for quick deliveries. They've done a nice job. As
5 Globe has.

6 VICE CHAIRMAN ARANOFF: When you're setting
7 up your contracts for a particular year, well, a
8 couple of questions. First, do you do separate
9 contracts for each of the different grades or recipes
10 that you're looking for?

11 MR. MCHALE: Generally we'd write one
12 contract and then have specific line items for
13 specific plants and their specific chemistries. So
14 typically an order would have eight, nine, twelve
15 locations on it with probably five, six or seven
16 different chemistries.

17 VICE CHAIRMAN ARANOFF: And each of the
18 suppliers to which you award some of your business
19 would be expected to be supplying all of those
20 chemistries or most of those chemistries?

21 MR. MCHALE: Generally there are suppliers
22 that do a better job on the high purity alloys than
23 other suppliers. They have more availability of the
24 lower iron material.

25 VICE CHAIRMAN ARANOFF: Okay.

1 What can you tell us about the way the
2 contracts are structured? And if you need to answer
3 this in confidence later that's okay, but I'm
4 interested basically in whether the price and the
5 quantity are fixed terms in the annual contract.

6 MR. MCHALE: They're generally requirement
7 agreements, so what we would do is take the
8 requirement of a specific plant and assign it to a
9 specific producer and they would live and die with
10 their requirements for silicon. So it's not an exact
11 quantity.

12 As far as the pricing is concerned, it's a
13 fixed price. There are no further negotiations either
14 up or down. Alcoa honors their agreements and we
15 expect our suppliers to do the same. So even if the
16 price in the market for silicon would go down, we
17 would continue to buy at the price that we contracted
18 for.

19 VICE CHAIRMAN ARANOFF: So when the domestic
20 producers were testifying this morning that they've
21 bene pressured by their customers to lower prices when
22 market prices have gone down, they're pointing to
23 someone other than Alcoa.

24 MR. MCHALE: They are.

25 VICE CHAIRMAN ARANOFF: Okay.

1 Just so I understand you, when you say you
2 give requirement contracts for each of your
3 facilities, does that mean that one supplier is
4 getting a requirements contract for a particular
5 facility, or two suppliers could be splitting a
6 requirements contract for a particular facility? How
7 does that work?

8 MR. MCHALE: It would be an extremely rare
9 case where we would split it between two suppliers.
10 We do have one location where we've done that. The
11 rest have been single sourced with a particular
12 supplier.

13 VICE CHAIRMAN ARANOFF: Because you stressed
14 in your testimony that your concern is supply
15 security. Are you assuring that in the sense that if
16 the one supplier that you've matched up with a
17 particular facility for some reason just can't come
18 through for you, you can move supply that was under a
19 requirements contract from another facility?

20 MR. MCHALE: We have a number of approved
21 suppliers, and if we have contracts for them we can
22 move metal from one plant to another as far as just
23 backup, safety supply.

24 VICE CHAIRMAN ARANOFF: Do you ever make
25 spot purchases?

1 MR. McHALE: I would say it would be very
2 very rare. On occasion if a particular supplier were
3 to let us down and we had to buy some spot metal to
4 cover in, it's a rare occasion.

5 VICE CHAIRMAN ARANOFF: Thank you very much.
6 I see my light's turned yellow.

7 Thank you, Mr. Chairman.

8 CHAIRMAN PEARSON: Commissioner Hillman?

9 COMMISSIONER HILLMAN: Thank you, and I too
10 would join my colleagues in welcoming you and thanking
11 you for taking the time to be with us this afternoon.

12 Mr. McHale, if I can stay with you. First,
13 we appreciate very much the willingness of purchasers
14 to come in. You give us a different perspective than
15 we get if we only hear from producers, so I want to
16 take advantage of the fact that you've been kind
17 enough to be with us and follow up a little bit.

18 We heard a lot of discussion this morning on
19 this issue of whether the product is in essence tailor
20 made or whether it's really, as it was described this
21 morning, in essence Globe making a single product with
22 a little bit of specialty low iron product. But
23 fundamentally, making all of their product at the
24 level that would satisfy the chemical grade
25 purchasers, but then in essence selling it, if you

1 will, down market to you and others that might not
2 have the same level of specifications that the
3 chemical folks do.

4 Is that your experience? Is it your
5 understanding that in essence the producers are making
6 more or less large batches of one set of products?

7 MR. MCHALE: No, that is not my
8 understanding. I buy very different chemistry. Even
9 the seven specifications that I have, the irons will
10 vary from a 20 max iron, .20, up to a .50. It doesn't
11 sound significant, but it is significant.

12 An example would be that, talking about a
13 commodity type of thing, you need a sameness. An
14 example is the Russians could never make our high
15 purity silicon. They could never make it. They
16 didn't make it, they don't make it today, they don't
17 bring it into the United States, we don't even buy it
18 in Europe. They never got down to those low irons.
19 Those low irons are very difficult, and not every
20 producer can get there.

21 COMMISSIONER HILLMAN: You mentioned that
22 you are purchasing from Globe. Is it your
23 understanding that when Globe is producing product for
24 you, is it your understanding that they understand
25 that this particular batch or set of product is coming

1 to you and must meet a particular set of
2 specifications?

3 MR. McHALE: They know what our
4 specifications are and they ship to those
5 specifications. How they get there from a
6 manufacturing process, I really don't know what their
7 operations, how they specifically do it.

8 COMMISSIONER HILLMAN: But in your view,
9 they are sending you products with different specs.

10 MR. McHALE: Absolutely.

11 COMMISSIONER HILLMAN: It's not
12 monolithically one product that is high enough to meet
13 all your specs.

14 MR. McHALE: No. If that were so, I
15 wouldn't pay the premium that I pay on the high purity
16 silicon grade.

17 COMMISSIONER HILLMAN: I appreciate that.

18 MR. VANDER SCHAAF: And the Brazilian
19 producers don't produce one product in a batch.
20 They've informed me that you really can't. There are
21 certain impurities that can't be refined out later in
22 the process. Iron, phosphorous, titanium, and several
23 others that you have to take account of when you
24 produce the product, so you have to know who you're
25 producing it for, what it's being produced for before

1 you take the step of producing.

2 I have to admit, I was very confused by the
3 statements this morning, especially the statement that
4 there's essentially one product. I just don't see
5 that, even in the market, but certainly I don't see
6 that among the Brazilian producers at all.

7 COMMISSIONER HILLMAN: In fairness I think
8 it was described as mostly one product along with the
9 low iron. Clearly I heard them saying there is in
10 essence two products out there from their perspective
11 and that the vast majority is simply produced to the
12 highest specs, the chemical grade specs, and then is
13 in essence sold down market, is how I understood it.
14 But you're telling me you don't perceive the market
15 that way.

16 Tell me a little bit about your decision to
17 purchase from RIMA and whether or not the fact that
18 Elkem was purchased by Globe affected that. In other
19 words, if you're trying to make sure you have product
20 available from more than one supplier.

21 What did the purchase of Elkem by Globe do
22 to your need to source from other places? Who did you
23 turn to?

24 MR. McHALE: Specifically the RIMA purchase
25 was done before the Globe Elkem acquisition. We had

1 an increased requirement for high purity silicon in
2 Rockdale, Texas. From a transportation standpoint it
3 seemed to fit coming out of Brazil into the port of
4 Houston. We bid them and they came in with some
5 reasonable pricing and they became a supplier to that
6 specific location, sharing the business with Globe.

7 COMMISSIONER HILLMAN: How did the fact that
8 they had been, had the antidumping order revoked
9 against RIMA affected your decision to go to RIMA?

10 MR. McHALE: They were suddenly available in
11 the United States and represented the United States so
12 they ended up being qualified, they were qualified for
13 Alcoa Brazil, and then we qualified them in the United
14 States and they were on our bid list.

15 COMMISSIONER HILLMAN: Again, obviously
16 Petitioners are going to argue well exactly what
17 happened with RIMA is going to happen with the other
18 non-subject producers. In other words, if you look at
19 it, as soon as the orders are revoked the shipments
20 from both CBCC and RIMA go up very substantially,
21 which then begs the question of okay, why shouldn't we
22 assume the same thing will happen with respect to the
23 other four Brazilian producers?

24 MR. McHALE: The increase in our requirement
25 in Rockdale, Texas was new business to Alcoa United

1 States and it was shared with Globe and RIMA. So
2 Globe picked up in that growth also.

3 MR. VANDER SCHAAF: There were no sales
4 taken away from any domestic producers with respect to
5 that RIMA contract.

6 With respect to CBCC, they're owned by Dow
7 Corning which also owns Simcala. I find it hard to
8 believe that Dow Corning would ever permit anything to
9 happen to their Simcala operations. They're the
10 owner. They're Dow Corning. I have a hard time
11 believing that CBCC's exports to the U.S. are taking
12 sales away from a domestic producer. If they're
13 taking sales away from a domestic producer one would
14 assume they're taking sales away from Simcala and that
15 that's a conscientious corporate policy choice. That
16 doesn't bear on material injury to Simcala.
17 Otherwise, if it does, why do it?

18 I particularly take issue with them saying
19 these imports from CBCC, which have been, I guess I
20 can't get into the volumes. Mr. Melgaco knows and has
21 said briefly in his testimony the breakdown of that,
22 but especially with CBCC we just don't see how that is
23 an example of a problem with Brazil.

24 The other Brazilian producers don't have the
25 affiliation with some big purchaser in the U.S. that

1 CBCC has.

2 COMMISSIONER HILLMAN: Just so I understand
3 it, again I understand that the numbers themselves are
4 confidential, but as I hear you saying if you do the
5 math, in essence the increase in non-subject Brazilian
6 imports that we've seen in your view is driven by CBCC
7 which in your view in essence doesn't count because of
8 the connection with Dow and by this particular
9 relationship between Mr. McHale and RIMA for new
10 volume, and that is the majority of, or the vast
11 majority as you're describing it of the increase in
12 non-subject Brazilian product.

13 MR. McHALE: Yes. I don't think CBCC would
14 have shipped to the U.S. were it not for Dow Corning.
15 Their parent.

16 COMMISSIONER HILLMAN: All right.

17 If we look at the other thing the Petitioner
18 is going to is when the EU lifted its antidumping
19 order on Brazil in 1998, shipments from Brazil to the
20 EU rose very substantially. Again, why would we not
21 assume a similar pattern coming into the U.S. market
22 if the antidumping orders are revoked here?

23 MR. McHALE: First, the prices and demand
24 structure in Europe really necessitated a supply from
25 a supplier and a country like Brazil. It wasn't as if

1 it was pushed product. It was demanded product at
2 fairly reasonable prices. Even if you look at the
3 pricing trends in your publicly available information
4 in the report, the prices in Europe are increasing.
5 So the Brazilians have not had any significant adverse
6 impact on prices in Brazil or in Europe, sorry, and
7 indeed the Europeans have filed antidumping
8 investigations against other countries where imports
9 like from China have had that kind of an impact.

10 So although volume has gone up to Europe,
11 demand has gone up, and the need for the Brazilian
12 product has gone up. And it's pursuant to long term
13 contracts with relationships with suppliers. It's not
14 like they're sending spot sales out there at dumped
15 prices.

16 So that evidence actually supports the
17 Respondents' case to a large extent.

18 COMMISSIONER HILLMAN: Mr. McHale, would you
19 have a comment on this view of how frequently
20 purchasers switch suppliers of silicon metal?
21 Obviously you, I won't say switched, but you picked up
22 RIMA as a supplier. But again, how often have you
23 switched suppliers for any significant portion of your
24 purchases of silicon?

25 MR. McHALE: I think RIMA was probably the

1 first new supplier we've brought in in five to seven
2 years, so we really don't switch that much from
3 supplier to supplier.

4 COMMISSIONER HILLMAN: Would you say that's
5 typical in the industry?

6 MR. McHALE: I would say it's probably
7 typical to the industry.

8 COMMISSIONER HILLMAN: On the aluminum side.

9 MR. McHALE: On the aluminum side.

10 COMMISSIONER HILLMAN: Would you have any
11 view on the chemical side?

12 MR. McHALE: I really don't know on the
13 chemical side.

14 COMMISSIONER HILLMAN: Mr. Vander Schaaf,
15 can you tell me what the status of the antidumping
16 investigation in Brazil regarding silicon metal from
17 China is? Or Mr. Melgaco.

18 MR. MELGACO: Pardon?

19 MR. VANDER SCHAAF: I believe it was a
20 safeguard --

21 COMMISSIONER HILLMAN: I believe there is a
22 case, some sort of a trade remedy case, in Brazil
23 against Chinese imports of silicon metal. Do you know
24 the status of that?

25 MR. MELGACO: We asked for, we gave to the

1 government a petition and the government said no, it's
2 not, it has no sense this. So we wait. If the
3 imports increase more, we can study the problem. Now
4 it's over.

5 COMMISSIONER HILLMAN: The investigation has
6 been terminated.

7 MR. MELGACO: Yes. They did begin the
8 investigation.

9 COMMISSIONER HILLMAN: But they rendered a
10 negative determination?

11 MR. MELGACO: We asked of petition from
12 Brazilian government to install investigation against
13 China, and we had, they answered now is not the, the
14 figures we have here doesn't justify this now. Let's
15 see the behavior of their imports to Brazil and after
16 then we will study.

17 MR. VANDER SCHAAF: I believe the operative
18 word is the government did not institute the
19 investigation.

20 MR. MELGACO: No, the government didn't
21 institute the investigation.

22 MR. VANDER SCHAAF: It was a China
23 safeguards proceeding, I believe. Brazil has the same
24 provision under its law that most countries in the
25 world have when China joined the WTO which allowed

1 them to do special safeguards against China only. It
2 was actually a China safeguard investigation, correct?
3 Petition?

4 MR. MELGACO: Correct.

5 COMMISSIONER HILLMAN: If there is any
6 readily available, again, easy summary of what exactly
7 happened on this case, when the request was made, when
8 the Brazilian government issued whatever it would have
9 issued in terms of not institution this that could be
10 put on the record, I'd appreciate that.

11 I apologize, Mr. Chairman, for going over my
12 time.

13 MR. VANDER SCHAAF: Okay.

14 CHAIRMAN PEARSON: We got useful
15 clarifications on the red light, so that was time well
16 spent.

17 Commissioner Koplan?

18 COMMISSIONER KOPLAN: Thank you very much,
19 Mr. Chairman.

20 Mr. Melgaco, I also want to thank you very
21 much for coming all this way to appear before us.
22 It's very much appreciated.

23 I've been sitting here listening to the
24 questions and answers and my questions are slipping
25 away but I want to come back to the issue of freight

1 costs, if I could, which has been discussed in your
2 brief and by you this afternoon, Mr. Melgaco.

3 When you said in your direct testimony that
4 after the incidents of September 11, and I'm looking
5 at your testimony, "With new regulations and
6 restrictions imposed for exporting into the United
7 States, freight costs to ship from Brazil to the U.S.
8 became much higher than freight costs to ship from
9 Brazil to Europe or Japan, for example."

10 The only place I can find something that
11 quantifies for me what those differences are is Mr.
12 Vander Schaaf, in your Exhibit 2 which is
13 confidential. And it's dated August 1, 2006. It does
14 quantify differences in freight costs.

15 What I can't tell from that exhibit is over
16 what period of time this document is referring to. I
17 know the date of the document. Also because as I
18 said, the date of the document is August 1st of this
19 year, also because this you're alleging started after
20 September 11 of '01, I am wondering whether you could
21 provide this kind of documentation for each of the
22 years in the second period of review so that I can
23 understand what the trend was with these freight costs
24 during our five year period of review.

25 Can you provide similar documentation? Is

1 what I'm looking at typical of what's occurred? Or
2 did it escalate to what I'm looking at.

3 MR. VANDER SCHAAF: I think it has
4 escalated. What what is is the Brazilian producer
5 decided to compare ferrosilicon costs and actually got
6 a quote to say if I were going to ship today, so those
7 costs were as of the day they requested it. To get a
8 quote for shipping from Brazil to the U.S. and Europe,
9 ferrosilicon, a comparable product, to say these are
10 what the differences are that we face.

11 COMMISSIONER KOPLAN: In other words the
12 cost of shipping silicon would be no different than
13 the cost for shipping ferrosilicon in this document?

14 MR. VANDER SCHAAF: I'm not aware that there
15 would be. I'll confirm that, but they're very
16 comparable products and I'm guessing that, and his
17 assumption in providing that to me was that they would
18 be the same essentially.

19 COMMISSIONER KOPLAN: -- refer to the fact
20 that it's ferrosilicon because it's all confidential.

21 MR. VANDER SCHAAF: I appreciate that. We
22 probably could have done creative bracketing on that.
23 But --

24 COMMISSIONER KOPLAN: Can you give it to me
25 for the period of view so that I can see the costs for

1 each year?

2 MR. VANDER SCHAAF: It wouldn't be in the
3 nature of a quote request, but maybe they can get some
4 kind of historical data from their shippers that they
5 use and we can find other sources for shipping costs
6 that we can provide. But I don't think I can go to
7 them, to one of the shippers and say look, give me a
8 quote of what it would have cost three years ago, or
9 two years ago, or a year ago. They'll give me that
10 kind of a thing today which will then compare to what
11 it was on the date of that document. But I think
12 we'll have to go to different sources to get the
13 historical costs.

14 COMMISSIONER KOPLAN: Mr. Melgaco, is there
15 anything you can add to that, or Mr. McHale, in terms
16 of our ability to get that kind of information?

17 MR. MELGACO: No.

18 MR. VANDER SCHAAF: Not that I know of, no.
19 I'm guessing Alcoa would have better luck than me, but
20 I don't know if he's going to be willing to help me out
21 on this one.

22 COMMISSIONER KOPLAN: I understand you're
23 saying they went way up, but I'm trying to understand
24 how much over the period.

25 Thank you.

1 Let me come back to a question that was
2 asked this morning and that's the feasibility of
3 switching an electric arc furnace from the production
4 of ferrosilicon to silicon in light of current prices
5 for both products and costs associated with such a
6 conversion, how long would that take, how much would
7 it cost, is it feasible to do so?

8 Mr. Melgaco, could you help me with that?

9 MR. MELGACO: Sorry about my English. Could
10 you ask me again?

11 COMMISSIONER KOPLAN: I'll do it again.
12 You've been doing fine. I'll repeat it again for you
13 and go a little slower.

14 MR. MELGACO: Thank you.

15 COMMISSIONER KOPLAN: What I'm trying to
16 understand is how difficult is it to switch from
17 ferrosilicon to silicon in production, or vice versa,
18 in light of current prices for both of those products
19 and the costs associated with that conversion?

20 This morning I think we got an estimate of
21 such a conversion from the domestics of 30,000
22 American dollars, if I remember correctly. With a
23 particular conversion that took place. But I'd like
24 to hear from you on that.

25 How long would it take?

1 MR. MELGACO: I don't have the numbers in
2 terms of the cost, but I know I have prepared about
3 this subject the difficulties of facilities to convert
4 from one, from ferrosilicon to silicon metal. I have
5 a small statement. If I could read it, I think it
6 would explain it.

7 COMMISSIONER KOPLAN: Absolutely. That
8 would be very helpful.

9 MR. MELGACO: Thank you.

10 Switching a furnace from the production of
11 ferrosilicon to silicon metal is a complicated and
12 sometimes unachievable task. Procedures related to
13 switching furnaces can be very expensive and not cost
14 effective.

15 As is stated by the Commission staff, the
16 conversion of ferrosilicon to silicon metal is
17 technically possible for smaller ferrosilicon furnace,
18 but may be technically impossible if the ferrosilicon
19 furnace is large.

20 Minasligas and Italmagnesio are the only
21 Brazilian subject silicon metal producers that produce
22 both silicon metal and ferrosilicon. It's very
23 difficult to product shift from ferrosilicon to
24 silicon metal. These are several technical
25 constraints that make such a conversion virtually

1 unfeasible under certain circumstances.

2 If I may, I would like to comment on some of
3 them.

4 The electrodes normally used in the
5 production of ferrosilicon is a self-baked soderbergh
6 type. This electrode is different from the type of
7 electrode used in production of silicon metal. This
8 electrode is formed from a carbon base and needs to be
9 encased in the steel plate form.

10 As electrode is consumed during the process,
11 the -- case melts down, contaminating the furnace with
12 iron. For that reason, if one uses this type of
13 electrode to produce silicon metal, the product will
14 inevitably have a higher than acceptable iron content
15 which cannot be diminished by using conventional
16 refined metals. Higher iron contents are generally
17 not accepted by silicon metal customers.

18 Conversely, the electrodes used in the
19 production of silicon metal is normally the pre-baked
20 carbon type which does not require a steel casing. As
21 a consequence the obtained final product always has
22 lower iron impurities as required by silicon metal
23 customers.

24 This technical constraint greatly limits the
25 ability of ferrosilicon metal producers to shift

1 production.

2 To replace a soderbergh electrode with pre-
3 baked electrodes it's necessary to reinforce the
4 structure, it's necessary to reinforce the structure
5 of the furnace building as well as replace the
6 overhead traveling crane of the top floor. This
7 because the pre-baked electrodes are supplied in
8 sections of solid carbon about nine feet long which
9 are to be screwed to the top of the electrode column,
10 so requiring a higher vertical span above the column
11 and importing significantly higher loads both to the
12 building structure and to the crane that is used to
13 serve the electrode handling.

14 Depending on the company's plants, this
15 would require them to raise the roof structure by
16 several feet and would involve high costs that could
17 make it unreasonably expensive. Moreover, if
18 soderbergh electrode is replaced with the pre-baked
19 one, then the electrode slipping device has to be
20 replaced as well because of the greater weight that
21 the slipping device will have to be subjected to.

22 The replacement of the electrode slipping
23 device is another constraint that would have to be
24 faced.

25 As is stated by the Commission staff, it's

1 generally easier for firms to switch from silicon
2 metal production to ferrosilicon production than the
3 reverse. Ferrosilicon contains more impurities than
4 silicon metal and it tends to contaminate the furnace
5 lining with impurities intolerable in silicon metal
6 production.

7 One should not confuse the technical
8 constraints and requirements of switching an elastic
9 furnace, in a furnace, to the production of
10 ferrosilicon to silicon metal with the constraints to
11 do the opposite.

12 There are further technical constraints and
13 difficulties for switching an elastic furnace from the
14 production of ferrosilicon to silicon metal.

15 The book entitled "Production of High
16 Silicon Alloy" is a worldwide acknowledged publication
17 dedicated to silicon metal and represents an excellent
18 source to understand them. I have copies of it here
19 with me and I can provide it to you if you like.

20 Thank you.

21 COMMISSIONER KOPLAN: Thank you very much.

22 Thank you, Mr. Chairman.

23 Mr. Vander Schaaf, if there's no objection
24 on your part, if that statement could be included as
25 part of the record so that we're sure that the

1 transcript is complete on that.

2 MR. VANDER SCHAAF: Sure.

3 COMMISSIONER KOPLAN: All I would take you
4 up on is your offer of that additional submission, Mr.
5 Melgaco.

6 Thank you very much.

7 MR. VANDER SCHAAF: So just to summarize,
8 for Menisligas it would be the cost of raising their
9 roof essentially to convert.

10 COMMISSIONER KOPLAN: I got that. Thank
11 you.

12 Thank you, Mr. Chairman.

13 CHAIRMAN PEARSON: Thank you, Commissioner.
14 Turning now to Commissioner Lane.

15 COMMISSIONER LANE: Good afternoon.

16 The statute requires us to evaluate all
17 relevant economic factors within the context of the
18 business cycle. I would like to know how you would
19 define the business cycle with regard to this
20 industry.

21 Mr. Vander Schaaf?

22 MR. VANDER SCHAAF: I would probably defer
23 to Mr. McHale. I'm not aware of any cycle, to be
24 honest with you. I think you have peaks and valleys in
25 this industry like any industry, or this market, and

1 we're currently at a high level, and the forecasts are
2 that demand is expected to continue at a high rate.
3 But I don't see a recurring cycle in this market.

4 What I see is a petitioning industry very
5 willing to fire off a petition as soon as imports from
6 any country go above a certain level, or as soon as
7 the producer feels the need to bring someone back in
8 to an order that's already been terminated from an
9 order.

10 But I don't want to give any justification
11 to the historical propensity for this industry to file
12 antidumping cases and somehow suggest that it's
13 because of business cycles. I think there are just
14 normal downturns in business demand. But I would
15 defer to Mr. McHale.

16 MR. McHALE: I don't think there's a
17 definitive cycle you can look at. It has its own
18 cycle. It's amazing to me that it is unrelated to
19 other metals, because a lot of metals really are
20 running from a price standpoint. Aluminum ran and
21 backed off a little bit, but silicon has been late in
22 the charge. It's moving up now. We're having higher
23 prices of silicon metal, but it may be their year,
24 2006 and 2007. But it's hard to say there's a
25 definitive cycle that would run two or three years

1 type of thing. It's very erratic.

2 COMMISSIONER LANE: Thank you.

3 Now I have a follow-up question on one of
4 Commissioner Hillman's questions regarding product
5 specs and the various specs that Alcoa has.

6 Mr. McHale, I believe you indicated that you
7 had several specs you required related to iron content
8 but you were not aware how producers met those specs.
9 Is it your experience that some of your lower quality
10 specs might be met with product that is of a higher
11 quality or with lower iron content than your specs
12 allow?

13 MR. McHALE: I believe there are times that
14 they could apply a lower iron material against a
15 higher iron spec. It depends on what they have in
16 inventory and what's coming across the line.

17 In general the way I believe it is they will
18 bring their raw materials together and make a product
19 and if it meets my spec it goes to me; if it meets the
20 secondary spec it goes to them. And randomly, they
21 manage to make enough product to meet all the
22 requirements. That's the way I believe it works.

23 I don't believe they specifically make my
24 product, but I require a specific product. How they
25 get there and how they get the irons to the levels I

1 need, as long as it's there I don't care how they get
2 there. And as long as they continue to supply, that's
3 what I'm looking for.

4 COMMISSIONER LANE: So if they say the
5 product meets your specs then you just accept it?

6 MR. MCHALE: We randomly test some material.
7 The material is required to come in with test reports,
8 with accurate chemistries against what we're
9 requiring. Our metallurgist will check the chemistry
10 as reported versus what the order says, and then on a
11 quarterly, maybe once every half year, we'll randomly
12 sample some material and test it at our Alcoa
13 technical center.

14 COMMISSIONER LANE: Thank you.

15 Mr. Melgaco, on this question of meeting
16 buyers' chemistry specs, do you produce products
17 specifically tailored to meet buyers' specs? Or do
18 you generally produce the highest quality product
19 possible and then ship that product even if it exceeds
20 a buyer's specs?

21 MR. MELGACO: We produce tailor-made
22 products for specific companies. That's the normal
23 among the companies. If I understood your question.

24 COMMISSIONER LANE: My question was, do you
25 produce to the specs, or do you produce the highest

1 quality that you can, even if it exceeds the buyer's
2 specs?

3 MR. MELGACO: No, you produce to the
4 consumer's specifications.

5 MR. VANDER SCHAAF: I was thrown for a loop
6 by their comment this morning, quite frankly. I sent
7 an e-mail and called my colleague who is in Brazil,
8 Felipe Berer, one of our associates who can't come
9 back to the country until October because of U.S.
10 immigration laws.

11 He went ahead and sent out a communication
12 to the clients, because I was like where is this
13 coming from? This is his e-mail. I'm reading from my
14 Blackberry.

15 "Brazilians do not produce silicon metal the
16 way Globe allegedly does. They do produce according
17 to each customer's specs. In particular there are
18 some impurities/elements that can't be refined later
19 in the process such as iron, phosphorous, titanium,
20 and several others. Moreover, after silicon metal
21 solidifies, the producer cannot change the specs
22 without further processing. This seems to be one of
23 those myths Globe has created in this proceeding."

24 COMMISSIONER LANE: I guess you don't want
25 me to put your Blackberry into evidence.

1 (Laughter).

2 MR. VANDER SCHAAF: I was hoping that
3 reading it would suffice, but I can forward the e-
4 mail, I guess.

5 COMMISSIONER LANE: Thank you.

6 Mr. Vander Schaaf, let me stay with you.

7 In your pre-hearing brief you quoted numbers
8 comparing the cost of shipping a container of silicon
9 from Brazil to Europe and from Brazil to the United
10 States. What are those numbers on a per ton basis?
11 And you may have to provide that post-hearing, if it's
12 confidential.

13 MR. VANDER SCHAAF: Yes, and I don't know
14 the answer so we'll take a look at that and also
15 provide the information Commissioner Koplan has
16 requested and get you that answer.

17 COMMISSIONER LANE: Would you please
18 describe the competitive advantages and disadvantages
19 in terms of raw material costs and energy electricity
20 costs of the silicon producers in the United States,
21 Brazil, China and other non-subject producers? And
22 how have those factors changed since the previous
23 review?

24 MR. VANDER SCHAAF: I believe the request is
25 comparison of costs between Brazil and the U.S.?

1 COMMISSIONER LANE: Yes.

2 MR. VANDER SCHAAF: I'm pretty sure they're
3 going to say we don't know the U.S. producers' costs,
4 and we have read a number of things that we can
5 probably use on the APO record, we the attorneys, to
6 at least draw some comparisons. But in this regard it
7 has happened in the past that the Brazilians have this
8 energy rationing that they go through because the
9 furnaces use the electricity for heating the furnaces,
10 and Brazil is a big hydroelectric country and they
11 oftentimes find themselves in situations where they
12 don't have enough electricity to produce so they
13 ration electricity.

14 I believe in the past there were a couple of
15 periods when demand was so high that silicon producers
16 had to cease producing for the time being because of
17 the rationing process.

18 Perhaps you can provide some details about
19 that.

20 I know it's not giving you the cost issue,
21 but it does give you a manufacturing perspective that
22 creates a constraint at least, and, of course,
23 whenever you incur these types of examples you're, I'm
24 sure, incurring extraordinary costs.

25 MR. MELGACO: I have not access to United

1 States costs of energy, but in Brazil I can state that
2 five years ago, three years ago, energy cost was
3 established by the government so it's public. I can
4 provide to you if you want. But after some series,
5 three years ago, we made an agreement with
6 hydroelectric companies, some companies, and a
7 contract for ten years. I can send to you some
8 details. I don't have them with me. If you are
9 interested on them.

10 MR. VANDER SCHAAF: To also add, it's all
11 about electricity for costs. That was made very clear
12 to me by the producers. Electricity cost is by far
13 and away the dominant cost item.

14 COMMISSIONER LANE: Okay. Thank you.

15 Mr. Chairman, since my light has come on,
16 I'll just pass till the next round. Thank you.

17 CHAIRMAN PEARSON: Okay. Thank you.

18 Mr. Heckendorn, you have I think argued that
19 we shouldn't find no discernible adverse impact, but
20 if we don't do that, then you suggest we look at other
21 reasons for decumulating Brazil. Could you cite any
22 investigations that we've done in the past with
23 somewhat similar fact patterns in which the Commission
24 has found no discernible adverse impact? I mean, does
25 this one line up well with times when we've made that

1 finding before?

2 MR. HECKENDORN: None come to mind right off
3 the bat. I know the ones I was looking at were more
4 along the lines of the one I mentioned in my testimony
5 were more along the lines of conditions of
6 competition. Even where the Commission found there
7 was a discernible adverse impact and there was
8 reasonable overlap of competition, still found that it
9 was proper not -- exercised its discretion not to
10 cumulate. I think that matches up very well.

11 My point on no discernible adverse impact
12 was that when you factor all the volume arguments that
13 we have in our brief and the things that Mr. Vander
14 Schaaf talked about today, I think it's a legitimate
15 argument to make that this really isn't going to
16 impact the domestic industry because so much of the
17 production is nonsubject or dedicated to other markets
18 or the other production constraints like the energy
19 problems that they have in Brazil and like the long-
20 term commitments that they have to Europe.

21 CHAIRMAN PEARSON: Okay. Well, if you think
22 of more things for the posthearing, let us know.

23 MR. HECKENDORN: I will do that. Thank you.

24 CHAIRMAN PEARSON: Okay. Mr. Vander Schaaf,
25 this morning I had discussed with Petitioners the

1 question of whether they could provide an analysis of
2 why it would be economically rational for subject
3 Brazilian producers to shift sales from Europe to the
4 United States. So let me reverse and ask you, can you
5 or your clients provide some analysis of why it is not
6 economically rational to shift those shipments from
7 Europe to the United States?

8 MR. VANDER SCHAAF: Well, we've hit on this
9 a lot in our brief, but I really don't believe you can
10 just flick a switch and shift into the U.S. market.
11 First of all, there are constraints to getting here,
12 including the requirement to be certified and
13 qualified and so forth. They are at a high capacity
14 utilization level. They don't have plans to increase
15 capacity, so they in fact would have to shift sales
16 from one customer to another.

17 I think that they've been in Europe a long
18 time. They've established long-term relationships
19 with their customers. They are in long-term
20 contracts. They're not going to quickly abandon
21 these. The European market has imposed antidumping
22 duties on China, so they've got a very favorable
23 market there. And quite frankly, I can't think of any
24 economic reason why they would shift from that
25 dedicated market where demand is increasing and prices

1 are high and forecast to remain high, I can't see an
2 economic reason why they would shift from the E.U. to
3 the U.S.

4 CHAIRMAN PEARSON: Okay. Thank you.

5 Mr. McHale, perhaps you could take a stab at
6 this. The Petitioners have maintained that there
7 really are no differences in product mix between
8 product offered by China and by Brazil. Now with
9 Alcoa's interests in global sourcing, what's your
10 observation on that? Do you have a familiarity with
11 the product available, both from China and from
12 Brazil?

13 MR. MCHALE: We purchase Chinese material
14 for our Australian locations. We also buy a little
15 bit for Europe, specifically Hungary, which is not
16 part of the -- the Brazilian plants buy from the
17 Brazilian producers.

18 CHAIRMAN PEARSON: Okay. And are you able
19 to obtain from the Chinese any type of product that
20 you could obtain from the Brazilians?

21 MR. MCHALE: The Chinese over the past two
22 years have reached levels of purity that Alcoa
23 require. Previous to that, they were a higher iron
24 product. But with continuous improvement, they have
25 lowered their iron levels to meet Alcoa's tough

1 specifications.

2 CHAIRMAN PEARSON: Okay. So at least for
3 the products that Alcoa buys, it's possible to obtain
4 the product form either Brazil or China?

5 MR. MCHALE: Correct.

6 CHAIRMAN PEARSON: Okay. Any other comments
7 on product mix, Mr. Vander Schaaf or Mr. Heckendorn?

8 MR. VANDER SCHAAF: No, I don't -- go ahead,
9 Joe, if you have something. I don't believe there are
10 any other comments.

11 CHAIRMAN PEARSON: Okay.

12 MR. VANDER SCHAAF: I could add we have seen
13 the same reports that were reported in the staff
14 report that say the Chinese product has come of age
15 and has improved. We're just not familiar with the
16 product. They don't appear to be selling in the U.S.
17 market, and our Brazilian clients aren't familiar much
18 with what's being sold in the U.S. or could be sold in
19 the U.S. from China.

20 CHAIRMAN PEARSON: Okay. The Petitioners
21 also maintain that imports and the domestic like
22 product compete in all segments of the market and that
23 prices in all segments of the U.S. market are
24 interrelated. What's your response to that?

25 MR. VANDER SCHAAF: I think when they say

1 that prices are interrelated they tie it back to the
2 statement they made in their pre-hearing brief, which
3 they also argued, I think, in their last sunset and I
4 think in the original investigation; that when a price
5 in one segment goes down, it has a deleterious effect
6 on the price of a product in another segment.

7 You know, I don't know how much detail I can
8 get into this, but we don't see the same thing
9 happening today, where chemical grade products used to
10 be the highest priced products in the past
11 investigations, you see chemical prices now somewhat
12 coming down and lower than the primary aluminum grade
13 prices, particularly in Europe.

14 So I don't know that we would put a lot of
15 weight on that. We don't see the evidence to be
16 supporting that position, in terms of their inter-
17 related prices. I don't know, there was another
18 aspect here, a question that I think I might have
19 missed in terms of --

20 CHAIRMAN PEARSON: I just was asking about
21 the inter-relationship between, you know, the various
22 pricing and the various market segments, basically.

23 MR. VANDER SCHAAF: Okay, yes, so I just
24 don't see the evidence supporting that position, and I
25 don't know where they're coming from with that.

1 Because it's something they've said before. But in
2 this case, you just don't see that happening with the
3 chemical grade and the primary aluminum grades moving
4 in different directions, at levels that are different
5 than what they have been historically in terms of,
6 chemical grade is always higher. So I guess we
7 disagree with them.

8 CHAIRMAN PEARSON: Okay, and Mr. McHale,
9 have you noticed over time whether there is a fairly
10 close price relationship among different grades of
11 silicon metal that Alcoa might buy; or have some
12 grades, perhaps the harder to produce ones, tended to
13 have their prices move in some different way than
14 might happen to the easier to produce grades?

15 MR. MCHALE: The range of grades that we
16 purchase, the spread between the grades from the
17 highest purity to the lowest purity, those ranges have
18 tightened up a little bit. I think the industry,
19 whether it's Globe or the Brazilians -- everybody is
20 making a little bit of a higher quality product now
21 than maybe they did years in the past.

22 So the premium that we would pay on the high
23 period isn't as much as it has historically been, but
24 there is still a premium for those tougher
25 chemistries.

1 CHAIRMAN PEARSON: Okay, and at a time when
2 prices for silicon metal overall are increasing, you
3 would expect to see the lower grade prices rise and
4 then a premium of some sort be maintained for the
5 higher grades.

6 MR. MCHALE: I think the spread is where it
7 is; it's going to probably stay in the range that it
8 is now, and they'll all move in sinc, in lock step.

9 CHAIRMAN PEARSON: Okay, so there would then
10 be a significant inter-relationship among the prices
11 of the various grades. Okay, I just wanted to clarify
12 that.

13 My last question, I think, is for Mr.
14 Melgaco. Do you know whether any of the Brazilian
15 companies have implemented accounting systems that
16 would allow them to determine whether individual sales
17 to U.S. firms would be considered to be dumped?

18 MR. VANDER SCHAAF: I can tell you, as an
19 anti-dumping attorney who represents parties before
20 the DOC, we oftentimes can, you know, provide very
21 specific advice about what prices would have to be,
22 and based upon the Commerce Department's numerous
23 anti-dumping determinations in this case, if the
24 clients would hire us for that, we could certainly
25 advise them, almost with a pretty exact basis, whether

1 a sale that they are making would be at a dumped price
2 or not.

3 There is a lot of accuracy that you can
4 provide, especially in this kind of context where the
5 Commerce Department has provided so many
6 determinations over the years. You have a pretty good
7 expectation of what they're going to be doing in the
8 next proceeding, if you ship at a particular price.

9 There are variables like the exchange rate
10 and things like that that you take into account.
11 Quite frankly, oftentimes -- no disrespect to the DOC
12 -- but oftentimes it is something like the exchange
13 rate that is the biggest mover in the dumping
14 calculation. If they wanted to, they could implement
15 something like that.

16 CHAIRMAN PEARSON: To the best of your
17 knowledge, they are not currently using such systems?

18 MR. VANDER SCHAAF: I don't believe they
19 are. But they're not shipping now, so I don't know if
20 they are or not. They certainly haven't retained us
21 for that.

22 MR. MELGACO: Let me clarify. Because in
23 ABRAFE, the associates are competitors. We decide in
24 some moment, 15 years ago, that price and commercial
25 problems would not be discussed in ABRAFE. That's why

1 I couldn't answer your question; thank you.

2 CHAIRMAN PEARSON: Okay, well, if you have
3 any follow-up information for the record, by all
4 means, let us know. I understand the sensitivity that
5 firms might have in discussing this issue.

6 On the other hand, it could be of some
7 interest. Because we see on the record that some
8 firms have managed to get zero margins certified, year
9 after year, even while they are shipping product to
10 the United States. So somehow they're either getting
11 lucky or they know what they're doing with the
12 pricing.

13 MR. VANDER SCHAAF: There were some
14 instances where the producers didn't receiving zero
15 dumping margins. I'm not sure that I went into it in
16 the testimony.

17 But there were a couple producers that
18 received -- yes, Minasligas had a 1.67 percent dumping
19 margin from the 1995 to 1996 review period, a 1.23
20 percent margin from the 1990 to the 2000 review
21 period, and then the 0.74 percent dumping duty from
22 the 2000 to 2001 review period. So it's not as if
23 they've gotten zeros every time. They've also gotten
24 low dumping margins.

25 CHAIRMAN PEARSON: Okay, well, thank you; my

1 light has changed a minute or two ago, and I turn now
2 to Vice Chairman Aranoff.

3 VICE CHAIRMAN ARANOFF: Thank you, I'm
4 hoping that I can invite you to provide on the record,
5 in your post-hearing submissions, some additional
6 detail on the subject of the degree to which Brazilian
7 producers have dedicated their exports to other
8 customers. There's been a lot of discussion about the
9 European market and the fact that no one would abandon
10 their customers there, and that there are long-term
11 contracts.

12 Would you be able to provide for the
13 companies that you represent, Mr. Vander Schaaf, some
14 kind of documentation of with whom they have long-term
15 contracts and what volumes and time periods those
16 contracts cover? Of course, if there's any
17 information about price, that would be very helpful,
18 too.

19 MR. VANDER SCHAAF: Okay, we'll get that for
20 you.

21 VICE CHAIRMAN ARANOFF: Thank you; I wanted
22 to offer you the opportunity to respond to one factual
23 statement that was made in this morning's testimony on
24 the subject of whether Brazilian producers are likely
25 to expand their capacity.

1 I believe I heard the domestic producers
2 indicate this morning that they had relied on
3 information from CCM's website at the time of the
4 institution of these reviews, indicating that there
5 might be an increase in capacity contemplated, and
6 that information was subsequently removed from the
7 website. Does anyone have any information about that,
8 or would you like to respond?

9 MR. MELGACO: Well, they made up their mind
10 and then decided not to increase another furnace, to
11 put another furnace. So they put out on the website
12 this information, because they reformulated their
13 investments.

14 CCM is a big company. So we are involved in
15 Brazil, only for knowledge. They have a very big
16 problem of environmental installation -- some big
17 houses to eliminate air pollution. The investment is
18 very big. So the people are putting the money,
19 preparing to install that equipment. They are very,
20 very expensive.

21 For instance, for my sector, only 10 systems
22 are more than \$200 million. That's one of the
23 reasons, probably, that the CCM will not invest in new
24 furnaces any more.

25 VICE CHAIRMAN ARANOFF: Okay, if I

1 understand your answer correctly, it was essentially
2 that the costs, and particularly the environmental
3 compliance costs of the investment, proved too high
4 and the company reconsidered the decision to expand,
5 which is a fine answer and I appreciate that.

6 If there's anything that you want to add,
7 post-hearing, that can, you know, objectively document
8 what happened here, just in order to eliminate any
9 insinuation that somebody was hiding something on the
10 website, that would be appreciated.

11 MR. MELGACO: Okay.

12 MR. VANDER SCHAAF: We'll provide that.

13 VICE CHAIRMAN ARANOFF: Thank you; Mr.
14 Heckendorn, I have to ask you this question, since you
15 have been making all the cumulation arguments, and we
16 have gone at some length through the potential reasons
17 for not accumulation, based on either no discernable
18 adverse impact or discretionary factors.

19 In the event that the Commission were to
20 cumulate Brazil and China, can you still make an
21 argument for a negative determination on a cumulative
22 basis, because you don't do it in your brief?

23 MR. HECKENDORN: I can make an argument.
24 There's no question about that. I think it's going to
25 be a real tough case. I mean, I think that's why we

1 argued the brief the way we did, and I think that's
2 what makes this almost an equitable issue. It's
3 unfair to lump them together with a dead loser, in
4 some ways.

5 MR. VANDER SCHAAF: It dawns on us that
6 China is not going to get rid of 95 percent of their
7 capacity, right? I mean, over the next 20, 30, 50, 60
8 years? So every five years, Brazil is going to be
9 coming back saying, don't put us in with China; don't
10 put us in with China; don't put us in with China.

11 It's going to be the same. Unless something
12 major happens in China, you're not going to get rid of
13 the Brazilian order, ever. Because if you cumulate us
14 with China every time, it's going to be the same old
15 thing.

16 So just let us know if you decide not to
17 cumulate it, you're never going to do it, because we
18 won't keep coming back. Because it's going to be the
19 same thing, every time. They're just going to keep
20 getting bigger and bigger, and they're going to be
21 different than Brazil every time.

22 VICE CHAIRMAN ARANOFF: Okay, fair enough
23 answer -- let's see, on qualification. I wanted to
24 keep following-up on that. I guess just to make sure
25 that our record is complete on that, I believe you

1 testified that none of the currently subject Brazilian
2 producers is qualified -- I don't know. Did you say,
3 was that only with respect to Alcoa or any U.S.
4 purchasers?

5 MR. VANDER SCHAAF: Yes, it's in the public
6 staff report that of the purchasers who identified
7 that they have qualification certification
8 requirements, none of them identified the subject
9 Brazilian producers of any of the purchasers in the
10 United States. I'm not aware of any of our clients or
11 the additional company, Intalmagnesio, being qualified
12 by any purchasers in the United States who have
13 qualification and certification requirements. I
14 believe the only company that's qualified is RIMA with
15 Alcoa. That's all I've seen.

16 VICE CHAIRMAN ARANOFF: Okay, just to make
17 sure that our record is complete on that point, if you
18 could ask each of the companies that you represent
19 just to indicate to us whether they are qualified at
20 any U.S. accounts; and for those of them that were in
21 existence at the time of the original investigation,
22 whether they were qualified with U.S. customers at
23 that time or any time since. That would also be
24 helpful to know, even if they are not currently
25 qualified.

1 MR. VANDER SCHAAF: Okay, we'll do so.

2 VICE CHAIRMAN ARANOFF: Thank you; one
3 question on data -- you argued in your brief that the
4 Commission is not properly allocating the import data
5 between subject and non-subject Brazilian product in
6 the years in which the retroactive revocation of the
7 orders of RIMA and CBCC were effective.

8 So I wanted to follow-up on that and ask
9 you, do we currently have sufficient part-year,
10 producer-specific data on the record to make such an
11 allocation? If we were to make such an allocation,
12 what would that change and why would it matter,
13 ultimately, to our assessment of the effects of
14 revocation?

15 MR. VANDER SCHAAF: I don't know. I guess,
16 first of all, I don't think you have the data for the
17 split year, because the order was revoked. The period
18 of review also is right in the middle of the year. It
19 goes from July 1 to June 30. So when the Commerce
20 Department revoked, they revoked back to the beginning
21 of the review investigation. So you have a revocation
22 in the middle of the year, and you have a period of
23 review that began the middle of the year, the year
24 before.

25 I don't know that it matters whether they're

1 viewed as subject or non-subject, so much as there
2 should really be a recognition that those producers,
3 RIMA first, where they were revoked in 2001, their
4 period of review actually began in the middle of the
5 year, the year before, and ended in the middle of the
6 year, the following year, and the dumping margin was
7 determined to be zero for that time period.

8 So a good argument could be made that at
9 least with respect to half of that year, those
10 products should be non-subject. But staff had to make
11 a choice; do we put them in as subject or non-subject?
12 It's right in the middle of the year, so they put them
13 in as subject for that year. They could just as
14 easily put them in as non-subject and, in fact, the
15 dumping margin was zero for the shipments from January
16 to June of the year of the renovation. So it would
17 make sense to do so.

18 But I don't know if it's either here or
19 there, because we're talk primarily about CBC and
20 RIMA, who are no longer subject to the order, and it
21 shows their shipment activity, which obviously they
22 are no longer subject producers. So it's just a
23 matter of really the details in the data.

24 VICE CHAIRMAN ARANOFF: Well, I agree with
25 you. I mean, I looked at that and I'm sympathetic to

1 the point that you're making; except that when I look
2 at it further, I say, well, okay, but does it matter
3 to the bottom line of what I need to determine in this
4 case?

5 If you can think of anything in the post-
6 hearing that would tell me that it does matter, you
7 know, I'll go back to staff and ask them if they can
8 figure out how to get it done. Because I agree with
9 you at this point that their assessment at this point
10 was that they had to choose how to do it, because they
11 couldn't break it out.

12 MR. VANDER SCHAAF: Okay.

13 VICE CHAIRMAN ARANOFF: Okay, my light is
14 yellow, so thank you very much.

15 CHAIRMAN PEARSON: Commissioner Hillman?

16 COMMISSIONER HILLMAN: I have just a couple
17 of quick follow-ups. We heard a lot of discussion
18 about the relative incentives for the Brazilians to
19 come into the U.S. market, some of them predicated by
20 the data that the Petitioners put on the record in
21 terms of comparing the AUVs for Brazilian shipments
22 going to Canada and Mexico. We've heard a lot about
23 Europe, but they also did comparisons with Canada and
24 Mexico.

25 I guess I just wanted your take on the issue

1 of why the AUVs for shipments from Brazil to Canada
2 and Mexico are lower than the AUVs for shipments to
3 the United States.

4 MR. VANDER SCHAAF: I don't know, Joe, you
5 probably have looked at those better than I have. But
6 I'd probably have to ask the clients. I don't know if
7 it's an exchange rate thing. I would imagine it's not
8 an exchange rate thing.

9 But the one thing I will note, their
10 shipments to Canada have really declined
11 significantly. I don't have it in front of me, but in
12 the most recent period, they are extremely low.

13 I'm guessing that this has to do with China
14 driving prices down, because China prices are much
15 lower than the Brazilian prices, when you compare
16 those, and China's quantities are going up; whereas,
17 the Brazilians' quantities are going down. With
18 respect to Canada in particular, they reach a very
19 insignificant level.

20 MR. HECKENDORN: To the point where there
21 is, I think, one shipment, one container in the last -
22 -

23 MR. VANDER SCHAAF: I think it was 485 tons
24 in 2005, for example.

25 MR. HECKENDORN: And that's the trend with

1 respect to all three of those markets, that they're
2 leaving the market.

3 VICE CHAIRMAN HILLMAN: Okay, well, if there
4 is anything that you wanted to add in the post-
5 hearing, feel free. Then my last question is the same
6 one that I put to the Petitioners this morning, which
7 is with respect to the imports from China, since such
8 a significant number of them go into the TIB imports.
9 Should TIB imports be considered subject imports, for
10 purposes of our analysis?

11 Again, I would point you to the cut-to-
12 length plate opinions in 1999 and final in 2000;
13 again, in which there was some difference of view
14 among the Commissioners as to how to treat the TIB
15 imports. Then further, how does this affect our
16 analysis for China?

17 MR. VANDER SCHAAF: I think there's probably
18 going to have to be some legal research to provide a
19 very good answer. So I'm going to hold off responding
20 now and do some of that research to provide you our
21 position. I do have a position now, but I'd rather
22 take a look at what some of the research shows,
23 because I think that's a legal issue that deserves
24 some research.

25 VICE CHAIRMAN HILLMAN: Okay, if you could

1 respond in the post-hearing, that would be much
2 appreciated. With that, I have no further questions,
3 Mr. Chairman. But thank you very much to all of the
4 witnesses and the panel for your presentations this
5 afternoon, thanks.

6 CHAIRMAN PEARSON: Commissioner Koplan, do
7 you have any questions for Mr. Vander Schaaf?

8 COMMISSIONER KOPLAN: Thank you, Mr.
9 Chairman; I don't actually have any questions, but I
10 have a housekeeping request, Mr. Vander Schaaf.

11 That is. the submission that you were going
12 to add for the record, the working paper that Mr.
13 Melgaco had, and I think you had an attachment that
14 was going to accompany that -- yes, what you have in
15 your hand -- if you could make sure that those are
16 provided to Mr. Kramer.

17 MR. VANDER SCHAAF: Will do.

18 COMMISSIONER KOPLAN: Thank you, and with
19 that, I have nothing further. Thank you very much for
20 your answers to our questions.

21 CHAIRMAN PEARSON: Commissioner Lane?

22 COMMISSIONER LANE: I just have a follow-up
23 matter. I neglected to ask Mr. Melgaco to actually
24 put in the electricity costs from Brazil that he
25 offered to put into the record; and yes, I would like

1 to have those, thank you.

2 MR. MELGACO: Okay, we will provide it.

3 COMMISSIONER LANE: Thank you, and Mr.
4 Chairman, that's all I have.

5 CHAIRMAN PEARSON: I realized that I have
6 one more question. During the POR, some Brazilian
7 firms shifted from being subject producers to non-
8 subject producers, and we talked about that a fair
9 amount. Does that constitute a changed condition of
10 competition? I had that discussion this morning with
11 Petitioners. So I invite you to think about that,
12 also.

13 If it does constitute a changed condition of
14 competition, how should we take it into account in our
15 analysis; or perhaps a related question, can you cite
16 any previous investigations that might provide some
17 guidance for us on that?

18 MR. HECKENDORN: I think off the top of my
19 head, I mean, without doing research, I think you
20 treat them like any other non-subject imports. I
21 think that they're not part of the order.

22 CHAIRMAN PEARSON: Right, but the question
23 is, is the shift from being a subject producer to a
24 non-subject producer, in and of itself, is that a
25 change in the conditions of competition? That's what

1 I'm trying to understand.

2 MR. HECKENDORN: Okay.

3 CHAIRMAN PEARSON: And if that is a change
4 in the conditions of competition, then what do we do
5 with it? How does it influence our analysis?

6 MR. HECKENDORN: I think we'll have to give
7 that some thought and put that in a post-hearing
8 submission.

9 CHAIRMAN PEARSON: That's fine. I'll look
10 forward to the efforts of your thinking. Are there
11 any other questions from the dias; Madam Vice
12 Chairman, Commissioner Hillman?

13 (No response.)

14 CHAIRMAN PEARSON: Okay, well, let me see
15 whether I can do a better job with the wrap-up than I
16 did at noon time. Let's see, are there any questions
17 from the staff; Mr. Deyman?

18 MR. DEYMAN: Yes, I'm George Deyman, Office
19 of Investigations. I have one question for Mr.
20 McHale. As I recall, Mr. McHale, I think you
21 mentioned that when the order was revoked on RIMA, at
22 that time, that RIMA had already been qualified by
23 Alcoa, Brazil. Did you say that?

24 MR. MCHALE: RIMA was a supplier to Alcoa,
25 Brazil --

1 MR. DEYMAN: Okay, Brazil.

2 MR. MCHALE: -- but still needed to be
3 qualified in the United States.

4 MR. DEYMAN: Right.

5 MR. MCHALE: That doesn't count.

6 MR. DEYMAN: So the fact that it was
7 qualified in Brazil, did that make it easier or
8 quicker to qualify it in the United States?

9 MR. MCHALE: That expedited the process, by
10 the fact that they were qualified in Brazil, and we
11 had a track record as far as their promised
12 performance, service levels, paperwork.

13 MR. DEYMAN: So my question is, the current
14 subject producers in Brazil, Minasligas, LIASA, et
15 cetera, are they qualified with Alcoa in Brazil?

16 MR. MCHALE: I believe some of them are
17 qualified in Brazil; and if those were to come into
18 the states, they could qualify in more of an
19 expeditious manner than somebody who had never been a
20 supplier to Alcoa at all.

21 MR. DEYMAN: Well, if you could tell us, in
22 the post-hearing brief, which one are qualified in
23 Brazil, that might help.

24 MR. MCHALE: Okay.

25 MR. DEYMAN: The staff has no further

1 question; thank you.

2 CHAIRMAN PEARSON: Does counsel for the
3 domestic industry have any questions for the current
4 panel?

5 MR. KRAMER: We have no questions.

6 CHAIRMAN PEARSON: Okay, I'm advised that
7 the time remaining for those in support of
8 continuation is seven minutes from the direct
9 presentation and five minutes for closing, so a total
10 of twelve; and for those in opposition to continuation
11 of the order, nineteen minutes from the direct
12 presentation, and five minutes for closing.

13 So starting with the domestic industry, how
14 do you wish to proceed? Do you want to use some of
15 the time for rebuttal, or would you like to go
16 directly to closing?

17 MR. KRAMER: I would like to use a few
18 minutes for rebuttal.

19 CHAIRMAN PEARSON: Okay, and do you want to
20 do rebuttal separately from closing, or would you want
21 to do it as one combined effort?

22 MR. KRAMER: I'd be happy to do it on a
23 combined basis.

24 CHAIRMAN PEARSON: Okay, fine, well, thank
25 you very much panel. You may be excused, and we will

1 move to closing.

2 MR. VANDER SCHAAF: Thank you.

3 CHAIRMAN PEARSON: Welcome back, Mr. Kramer;
4 please go ahead when you're ready.

5 MR. KRAMER: Thank you, the first point I
6 would like to make is that Mr. Melgaco appeared before
7 the Commission during the hearing in the first sunset
8 review. In his testimony before the Commission, he
9 said and I'm quoting from his testimony, "In the
10 European Union, the anti-dumping order against silicon
11 metal from Brazil was revoked in February 1998.
12 Again, a huge increase of imports from Brazil was
13 predicted by the European producers; and again, it did
14 not happen." That's on the 14th of November, 2000.

15 The volume of imports into the EU from
16 Brazil in 1997 was 34,000 short tons. In 1998, the
17 year in which the order was revoked in February, the
18 volume was 48,000 short tons. In 1999, the volume was
19 66,000, and in 2000, it was 76,000. It fell back
20 slightly, and then for the years from 2003 to 2005,
21 it's in the range of 93,000 and up to 103,000.

22 So the Commission was told that there had
23 been no increase in volume. In fact, there was a very
24 dramatic increase, which continued over the period.

25 Second, I'd like to address some statements

1 made with respect to the producers subject to the
2 order and the margins calculated. In the opening
3 statement, it was said that the order had been revoked
4 with respect to Eletrosilex. During the course of the
5 testimony, the statement was made that Eletrosilex is
6 no longer a subject producer.

7 Just so the Commission knows the facts,
8 Eletrosilex participated in eight administrative
9 reviews, in each of which it got high margins; the
10 last of which was the 1998/1999 review. It was
11 assigned a 93.2 percent rate, after which it leased
12 its production facilities to RIMA, which is operating
13 them under a 10 year lease and has been shipping to
14 the United States under RIMA's rate.

15 So it still is an existing entity. It owns
16 the facilities. It's still subject to a high rate of
17 duty. It's simply that its facilities have been
18 leased to another producer.

19 The statement was made during the testimony
20 that the subject companies are "on their way out of
21 the order;" that they have several zeros in a row,
22 implying that they are progressing toward and
23 imminently will be revoked.

24 The fact is that in order to qualify for
25 revocation, a company must have three consecutive

1 periods of zero or de minimis dumping margins. None
2 of these producers has such a situation, because none
3 of them have shipped to the United States for a period
4 of two to three years.

5 So their circumstance is that they would
6 have to ship to the United States in commercial
7 quantities; do that for three consecutive years;
8 request and participate in a review; and get zero
9 and/or a de minimis rate in each one of those reviews;
10 and then persuade Commerce to revoke the order in
11 order to no longer be subject to the order.

12 The statement also was made that these
13 producers can and have shipped without dumping. I
14 just want to reiterate that these companies are not
15 shipping, cannot ship without dumping. It is
16 reflected in the fact they are not shipping and they,
17 in many instances, did not ship commercial quantities
18 during the periods when they achieved the reduced
19 rates.

20 The next point I'd like to address concerns
21 the statements regarding commitments to the European
22 market. If you look at the Brazilian producers'
23 brief, I don't think anywhere in the brief is there a
24 reference to long-term contracts. The references are
25 in terms of commitments.

1 There was a statement during the testimony
2 that they had documented the existence of long-term
3 contracts with European customers. In fact, I'm not
4 aware of any such documentation in the record.

5 When the ABRAFE witness was asked about such
6 commitments, he first pointed to the fact they were
7 certified in Europe, and we've heard discussion of,
8 you know, how significant that is.

9 Second, he said his information or his
10 records indicated that prices were better in Europe.
11 With respect to that, I want to point out that the
12 Brazilian export data show consistently over time that
13 the average unit value of shipments by the Brazilian
14 producers to Europe is lower than the average unit
15 value of their shipments to the United States. So I'm
16 not sure what records he's referring to.

17 Then he talked about good relations with
18 customers. Commissioner Aranoff has now asked for
19 information regarding long-term contracts. The only
20 further suggestion I have with respect to that is that
21 it's very, very important to know exactly what the
22 terms of the contract are.

23 You know, it's reflected in the testimony of
24 the domestic industry witnesses. It's very common, at
25 least in the United States, to have a long term

1 contact with an expected quantity and a price term
2 but, in fact, not have that be a binding agreement
3 over those period of years,

4 So I hope the Commission will get
5 documentation of the actual terms of these contracts,
6 or at least major contracts.

7 With respect to the question of freight
8 costs in the United States, you know, the
9 representation is that they've tremendously increased,
10 and that they are much higher than freight costs to
11 Europe and Japan.

12 We've pointed out that the import data show
13 that there, in fact, has been a decline in freight
14 costs to the United States from Brazil; and we do not
15 believe that there is this kind of differential that's
16 described. We're going to try to get more information
17 for the Commission with respect to whether or not
18 that's true.

19 One final rebuttal point, there were a
20 number of characterizations of what the Brazilian
21 producers' conduct has been in other markets and, you
22 know, what the nature of their pricing was, as
23 compared to the Chinese suppliers.

24 You know, we've submitted very detailed
25 information about this in our brief and exhibits to

1 the brief. The fact is, they are very low price
2 suppliers. They are among the lowest priced.

3 You know, they get pulled down toward the
4 Chinese price. They're not typically the lowest
5 price. But it's not a situation in which there's some
6 difference that suggests that they are fundamentally
7 different. They are selling at aggressive prices, and
8 they are among the lowest priced suppliers in all
9 these markets where their price conduct is not
10 disciplined by an order.

11 I'd like to turn to my closing statement.
12 The evidence before the Commission in these sunset
13 reviews shows that if the anti-dumping orders were
14 revoked, the domestic industry would again be severely
15 harmed by dumped imports from Brazil and China. Large
16 volumes of Brazilian and Chinese silicon metal would
17 re-enter the U.S. market at low prices, forcing U.S.
18 producers to cut their prices or lose sales. The
19 result would be collapsing market prices, reduced
20 sales, and severe financial injury to the domestic
21 industry.

22 The experience of the U.S. industry, prior
23 to imposition of the Brazil and China orders and
24 during the period the Commission examined in the
25 Russian investigation, clearly demonstrates the

1 devastating impact that a renewed flow of dumped
2 imports would have on U.S. producers. Such injury
3 also would occur if only the Brazilian order were
4 revoked.

5 The Brazilian companies that remain subject
6 to the order have large silicon metal capacity, as
7 well as substantial ferrosilicon capacity, that could
8 be converted to silicon metal production. The
9 Brazilian industry is highly export-oriented. It was
10 built to export, and the U.S. market is the most
11 attractive export market available to it.

12 Chinese import competition, which now is
13 present even in the Brazilian home market, has forced
14 the Brazilian producers to concentrate their exports
15 in a market in which they are best protected from
16 Chinese competition. If the Brazilian order were
17 revoked, the U.S. market would become that best
18 protected export destination.

19 The Brazilian producers claim that silicon
20 metal is no longer a commodity product. In fact,
21 silicon metal remains a commodity product, sold
22 primarily on the basis of price.

23 There are differences in customer
24 specifications and other customer requirements, but
25 competing suppliers can meet these different

1 specifications and requirements. There's not one word
2 that's been said that there is any customer that has
3 any requirement or any specification that the
4 Brazilian suppliers can't meet. To say simply that
5 there are differences doesn't mean that you are not
6 competing head to head, selling an interchangeable
7 product.

8 The reduced dumping margins currently in
9 effect for several subject Brazilian producers reflect
10 the discipline of the order. The same is true of the
11 complete absence of shipments by the subject Brazilian
12 companies to the United States in recent years.

13 The fact that the subject Brazilian
14 producers, like the Chinese suppliers, would shift
15 volume to the U.S. market and sell at aggressive
16 prices if the order is revoked, is shown by their pre-
17 order conduct and their behavior in other markets.
18 The fact that one of the most important U.S. customers
19 supports revocation confirms the conclusion that the
20 Brazilian suppliers would reenter the U.S. market.

21 Brazilian companies point to the fact that
22 there are only two remaining U.S. producers as a
23 positive change, reflecting industry strength. In
24 fact, the decline in the size of the U.S. industry and
25 the number of domestic producers is the result of

1 devastating injury caused by dumped imports, that
2 would be repeated if the orders were revoked.

3 To the extent that the domestic industry's
4 financial condition has improved, this recovery is
5 directly attributable to the relief from unfair import
6 competition provided by the dumping orders now in
7 place. Continuation of the orders is critical to the
8 survival of the U.S. industry, and we believe it's
9 warranted by the facts presented to the Commission.

10 CHAIRMAN PEARSON: Thank you, Mr. Kramer.
11 Mr. Vander Schaaf?

12 MR. VANDER SCHAAF: Thank you, I know we
13 have some rebuttal time, but I suspect I'll be out of
14 here in five minutes.

15 CHAIRMAN PEARSON: You're just trying to
16 earn brownie points.

17 (Laughter.)

18 MR. VANDER SCHAAF: Believe it or not, I'm
19 sure I am more tired than you guys are.

20 You know, we harken back to the difference
21 of this investigation from the past investigations.
22 There are conditions of competition that are
23 significantly different from the original
24 investigation and the last sunset review. We think
25 that that provides a situation where the Commission

1 cannot look back at an original investigation or its
2 prior sunset review, like it typically does, to say
3 this is what the conditions would be if we didn't have
4 an order.

5 This is a completely different universe now,
6 especially the domestic industry. It doesn't look
7 anything like it did during the original investigation
8 when you had eight producers in the market. The
9 Brazilian producers and the industry in Brazil are
10 markedly different.

11 So we think that this case offers an
12 opportunity for a fresh look, and that's what we
13 believe the Commission should do in this
14 investigation; look at what situations really are in
15 the Brazilian market and in the world market and in
16 the U.S. market. You'll see a domestic industry
17 that's doing relatively well. It's been consolidating
18 over the years and now has a very, very powerful
19 producer with a very large capacity, and you have
20 producers in Brazil who are no longer subject.

21 I don't think there's any ambiguity on this.
22 We understand the situation with Electrosilex. If
23 Electrosilex were to run its own facility and have its
24 facility back, it would be subject to the order. But
25 the fact of the matter is, RIMA has a 10 year lease

1 agreement with Electrosilex to use 100 percent of its
2 capacity in this entire facility; and when RIMA uses
3 that facility to produce the product and ship to the
4 United States, it is non-subject material. I didn't
5 mean to imply something contrary to that and, of
6 course, CBCC is no longer subject to the order.

7 The capacity utilization rates in Brazil are
8 very high. Their inventory levels are negligible, and
9 there are no trade relief measures against Brazil in
10 other countries.

11 We know that Petitioners always want to
12 harken back to the original investigations. Because
13 obviously, if we're sitting here, that means an order
14 was imposed and the Commission found injury. So why
15 wouldn't they want to look back to the original
16 investigations? But we think that the changes that
17 have occurred provide a unique situation that should
18 be taken into account.

19 With respect to the administrative reviews
20 that we've heard a lot about, I think we'll take a
21 close look at that and provide some detail in the
22 post-hearing brief.

23 But I wouldn't be surprised to see that in
24 every administrative review, based on the desire among
25 this industry to file trade relief requests, that

1 every year that a review was conducted, Alcoa and
2 Globe also requested the review, irrespective of
3 whether the foreign producers were requesting a
4 review. We'll take a closer look at that and provide
5 some details.

6 This case, in our view, hinges on
7 decumulation. It all turns on the China issue. We
8 think that we've provided a significant amount of
9 evidence to show the conditions of competition are
10 different when considering China, as compared to when
11 considering Brazil, and we believe that this is the
12 type of case that the Commission should rely on to
13 exercise its discretion to decumulate.

14 That's why Congress made a distinction in
15 the statute from a original investigation to a sunset
16 review, where it gave the Commission the discretion to
17 decide whether or not to decumulate.

18 We think that the Congress meant to give the
19 Commission this discretion to get rid of orders that
20 no longer serve the useful purpose of preventing a
21 likelihood of reoccurrence of injury; and we think the
22 Commission should exercise its discretion to
23 decumulate in this investigation, and then decide to
24 revoke the order as to Brazil. Thank you very much.

25 CHAIRMAN PEARSON: Thank you, Mr. Vander

1 Schaaf.

2 Post-hearing briefs, statements responsive
3 to questions and requests to the Commission, and
4 corrections to the transcript must be filed by October
5 6, 2006; closing of the record and final release of
6 data to parties, on October 31; final comments, on
7 November 2nd.

8 Madam Secretary, is it safe now for me to
9 adjourn this hearing?

10 MS. ABBOTT: Yes, Mr. Chairman.

11 CHAIRMAN PEARSON: Thank you; without
12 further ado, this hearing is adjourned.

13 (Whereupon, at 4:03 p.m., the hearing in the
14 above-entitled matter was adjourned.)

CERTIFICATION OF TRANSCRIPTION

TITLE: Silicon Metal from Brazil and China
INVESTIGATION NO.: 731-TA-471, 731-TA-472 (Second Review)
HEARING DATE: September 19, 2006
LOCATION: Washington, D.C.
NATURE OF HEARING: Hearing

I hereby certify that the foregoing/attached transcript is a true, correct and complete record of the above-referenced proceeding(s) of the U.S. International Trade Commission.

DATE: September 19, 2006

SIGNED: LaShonne Robinson
Signature of the Contractor or the
Authorized Contractor's Representative
1220 L Street, N.W. - Suite 600
Washington, D.C. 20005

I hereby certify that I am not the Court Reporter and that I have proofread the above-referenced transcript of the proceeding(s) of the U.S. International Trade Commission, against the aforementioned Court Reporter's notes and recordings, for accuracy in transcription in the spelling, hyphenation, punctuation and speaker-identification, and did not make any changes of a substantive nature. The foregoing/attached transcript is a true, correct and complete transcription of the proceeding(s).

SIGNED: Carlos Gamez
Signature of Proofreader

I hereby certify that I reported the above-referenced proceeding(s) of the U.S. International Trade Commission and caused to be prepared from my tapes and notes of the proceedings a true, correct and complete verbatim recording of the proceeding(s).

SIGNED: Christina Chesley
Signature of Court Reporter
