## *Meeting Current and Future Conservation Challenges through Synthesis of Long-term Silviculture and Range Management Research*

This workshop is first in a series of syntheses efforts emphasizing research from U.S. Forest Service Experimental Forests and Ranges. Our goal is to showcase some existing synthesis efforts, create and identify an inventory of studies/data bases, learn about methods for synthesizing diverse studies and scales, and identify key themes for future syntheses. While we will focus on silviculture and range management research, many more topics will be discussed, and this will provide impetus for future network efforts.

The workshop will be held September 30 to October 2, 2008 at The National Conservation Training Center (NCTC), Shepherdstown, WV.

An optional tour of the Fernow Experimental Forest will be on October 3, 2008. More information is forthcoming.
